

# Formal Radio Test Report

FCC ID: LDK-ETHIK2360

C9124AXE-B

Cisco Catalyst C9124AX Series 802.11ax Access Point  
5 GHz Primary Radio

**5725-5850 MHz**

Against the following Specifications:

CFR47 Part 15.407

**Cisco Systems**  
170 West Tasman Drive  
San Jose, CA 95134

|                                                                                                                                |                                                                                                       |

| <b>APPENDIX J: WORST CASE JUSTIFICATION</b>                                 | <b>128</b> |

## Section 1: Overview

The samples were assessed against the tests detailed in section 3 under the requirements of the following specifications:

|                   |
|-------------------|
| Specifications:   |
| CFR47 Part 15.407 |

## Section 2: Assessment Information

### 2.1: General

This report contains an assessment of an apparatus against Electromagnetic Compatibility Standards based upon tests carried out on the samples submitted. The testing was performed by and for the use of Cisco systems Inc:

With regard to this assessment, the following points should be noted:

- a) The results contained in this report relate only to the items tested and were obtained in the period between the date of the initial assessment and the date of issue of the report. Manufactured products will not necessarily give identical results due to production and measurement tolerances.
- b) The apparatus was set up and exercised using the configuration and modes of operation defined in this report only.
- c) Where relevant, the apparatus was only assessed using the susceptibility criteria defined in this report and the Test Assessment Plan (TAP).
- d) All testing was performed under the following environmental conditions:

|                      |                                        |
|----------------------|----------------------------------------|
| Temperature          | 15 °C to 35 °C (54 °F to 95 °F)        |
| Atmospheric Pressure | 860 mbar to 1060 mbar (25.4" to 31.3") |
| Humidity             | 10% to 75*%                            |

- e) All AC testing was performed at one or more of the following supply voltages:

110V 60 Hz (+/-20%)

#### Units of Measurement

The units of measurements defined in the appendices are reported in specific terms, which are test dependent. Where radiated measurements are concerned these are defined at a particular distance. Basic voltage measurements are defined in units of [dBuV]

As an example, the basic calculation for all measurements is as follows:

$$\text{Emission level [dBuV]} = \text{Indicated voltage level [dBuV]} + \text{Cable Loss [dB]} + \text{Other correction factors [dB]}$$

The combinations of correction factors are dependent upon the exact test configurations [see test equipment lists for further details] and may include:

Antenna Factors, Pre-Amplifier Gain, LISN Loss, Pulse Limiter Loss and Filter Insertion Loss

Note: To convert the results from dBuV/m to uV/m use the following formula:

$$\text{Level in uV/m} = \text{Common Antilogarithm } [(X \text{ dBuV/m})/20] = Y \text{ uV/m}$$

#### Measurement Uncertainty Values

|                                   |                        |
|-----------------------------------|------------------------|
| voltage and power measurements    | ± 2 dB                 |
| conducted EIRP measurements       | ± 1.4 dB               |
| radiated measurements             | ± 3.2 dB               |
| frequency measurements            | ± 2.4 10 <sup>-7</sup> |
| temperature measurements          | ± 0.54°                |
| humidity measurements             | ± 2.3%                 |
| DC and low frequency measurements | ± 2.5%                 |

Where relevant measurement uncertainty levels have been estimated for tests performed on the apparatus. This uncertainty represents an expanded uncertainty expressed at approximately the 95% confidence level using a coverage factor of  $k=2$ .

Radiated emissions (expanded uncertainty, confidence interval 95%)

|                    |              |
|--------------------|--------------|
| 30 MHz – 300 MHz   | $\pm 3.8$ dB |
| 300 MHz – 1000 MHz | $\pm 4.3$ dB |
| 1 GHz – 10 GHz     | $\pm 4.0$ dB |
| 10 GHz – 18GHz     | $\pm 8.2$ dB |
| 18GHz – 26.5GHz    | $\pm 4.1$ dB |
| 26.5GHz – 40GHz    | $\pm 3.9$ dB |

Conducted emissions (expanded uncertainty, confidence interval 95%)

|                 |               |
|-----------------|---------------|
| 30 MHz – 40 GHz | $\pm 0.38$ dB |
|-----------------|---------------|

A product is considered to comply with a requirement if the nominal measured value is below the limit line. The product is considered to not be in compliance in case the nominal measured value is above the limit line.

## 2.2: Date of testing

26-JUL-2021 to 28-AUG-2021; 01-SEP-2021 to 04-SEP-2021; 11-SEP-2021 to 14-SEP-2021; 24-NOV-2021; 1-DEC-2021

## 2.3: Report Issue Date

6-DEC-21

Cisco uses an electronic system to issue, store and control the revision of test reports. This system is called the Engineering Document Control System (EDCS). The actual report issue date is embedded into the original file on EDCS. Any copies of this report, either electronic or paper, that are not on EDCS must be considered uncontrolled.

## 2.4: Testing facilities

This assessment was performed by:

Testing Laboratory  
Cisco Systems, Inc.  
125 West Tasman Drive (Building P)  
San Jose, CA 95134  
USA

Headquarters  
Cisco Systems, Inc.,  
170 West Tasman Drive  
San Jose, CA 95134,  
USA

**Test Engineer(s):**

Johanna Knudsen, Julian Land, Mathew Blackburn

**2.5: Equipment Assessed (EUT)**

C9124AXE

**2.6: EUT Description**

The Cisco Catalyst 9124AX Series outdoor access points are next-generation Wi-Fi 6 access points encased in a rugged and robust design that service providers and enterprises can easily deploy.

The radio supports the following modes of operation. The modes are further defined in the radio Theory of Operation. The modes included in this report represent the worst-case data for all modes.

802.11a (6 – 54 Mbps)  
 802.11a Beam Forming (6 – 54 Mbps)  
 802.11n/ac HT/VHT20 (MCS0 – MCS31)  
 802.11n/ac HT/VHT20 Beam Forming (MCS0 – MCS31)  
 802.11n/ac HT/VHT20 STBC (MCS0 – MCS7)  
 802.11ax HE20 (MCS0 – MCS9) 1 SS  
 802.11ax HE20 (MCS0 – MCS9) 2 SS  
 802.11ax HE20 (MCS0 – MCS9) 3 SS  
 802.11ax HE20 (MCS0 – MCS9) 4 SS  
 802.11ax HE20 Beam Forming (MCS0 – MCS9) 1 SS  
 802.11ax HE20 Beam Forming (MCS0 – MCS9) 2 SS  
 802.11ax HE20 Beam Forming (MCS0 – MCS9) 3 SS  
 802.11ax HE20 Beam Forming (MCS0 – MCS9) 4 SS  
 802.11ax HE20 STBC (MCS0 – MCS9) 2 SS

802.11a non-HT40 (6 – 54 Mbps)  
 802.11n/ac HT/VHT40 (MCS0 – MCS31)  
 802.11n/ac HT/VHT40 Beam Forming (MCS0 – MCS31)  
 802.11n/ac HT/VHT40 STBC (MCS0 – MCS7)  
 802.11ax HE40 (MCS0 – MCS9) 1 SS  
 802.11ax HE40 (MCS0 – MCS9) 2 SS  
 802.11ax HE40 (MCS0 – MCS9) 3 SS  
 802.11ax HE40 (MCS0 – MCS9) 4 SS  
 802.11ax HE40 Beam Forming (MCS0 – MCS9) 1 SS  
 802.11ax HE40 Beam Forming (MCS0 – MCS9) 2 SS  
 802.11ax HE40 Beam Forming (MCS0 – MCS9) 3 SS  
 802.11ax HE40 Beam Forming (MCS0 – MCS9) 4 SS  
 802.11ax HE40 STBC (MCS0 – MCS9) 2 SS

802.11a non-HT80 (6 – 54 Mbps)  
 802.11n/ac HT/VHT80 (MCS0 – MCS9) 1 SS  
 802.11n/ac HT/VHT80 (MCS0 – MCS9) 2 SS  
 802.11n/ac HT/VHT80 (MCS0 – MCS9) 3 SS  
 802.11n/ac HT/VHT80 (MCS0 – MCS9) 4 SS  
 802.11n/ac HT/VHT80 Beam Forming (MCS0 – MCS9) 1 SS

802.11n/ac HT/VHT80 Beam Forming (MCS0 – MCS9) 2 SS  
802.11n/ac HT/VHT80 Beam Forming (MCS0 – MCS9) 3 SS  
802.11n/ac HT/VHT80 Beam Forming (MCS0 – MCS9) 4 SS  
802.11n/ac HT/VHT80 STBC (MCS0 – MCS9) 1 SS  
802.11ax HE80 (MCS0 – MCS9) 1 SS  
802.11ax HE80 (MCS0 – MCS9) 2 SS  
802.11ax HE80 (MCS0 – MCS9) 3 SS  
802.11ax HE80 (MCS0 – MCS9) 4 SS  
802.11ax HE80 Beam Forming (MCS0 – MCS9) 1 SS  
802.11ax HE80 Beam Forming (MCS0 – MCS9) 2 SS  
802.11ax HE80 Beam Forming (MCS0 – MCS9) 3 SS  
802.11ax HE80 Beam Forming (MCS0 – MCS9) 4 SS  
802.11ax HE80 STBC (MCS0 – MCS9) 1 SS

The following antennas are supported by this product series. Please note, the antenna information has been provided by the customer (the Cisco business unit). The data included in this report represent the worst-case data for all antennas.

| Frequency | Antenna Name    |           | Antenna Gain              |
|-----------|-----------------|-----------|---------------------------|
| 5 GHz     | TX/RX: External | Antenna 1 | 14 dBi (Side Lobe: 5 dBi) |

## Section 3: Result Summary

### 3.1: Results Summary Table

#### Conducted emissions

| Basic Standard                         | Technical Requirements / Details                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Result |

## Appendix A: Emission Test Results

### Conducted Test Setup Diagram

## A.1: Duty Cycle

### Duty Cycle Test Requirement

#### From KDB 789033 D02 General UNII Test Procedures New Rules v02r01:

B. Duty Cycle (x), Transmission Duration (T), and Maximum Power Control Level

1. All measurements are to be performed with the EUT transmitting at 100 percent duty cycle at its maximum power control level; however, if 100 percent duty cycle cannot be achieved, measurements of duty cycle, x, and maximum-power transmission duration, T, are required for each tested mode of operation.

### Duty Cycle Test Method

#### From KDB 789033 D02 General UNII Test Procedures New Rules v02r01:

B. Duty Cycle (x), Transmission Duration (T), and Maximum Power Control Level

The zero-span mode on a spectrum analyzer or EMI receiver, if the response time and spacing between bins on the sweep are sufficient to permit accurate measurements of the on and off times of the transmitted signal. Set the center frequency of the instrument to the center frequency of the transmission. Set  $RBW \geq EBW$  if possible; otherwise, set RBW to the largest available value. Set  $VBW \geq RBW$ . Set detector = peak or average. The zero-span measurement method shall not be used unless both RBW and VBW are  $> 50/T$ , where T is defined in section II.B.1.a), and the number of sweep points across duration T exceeds 100. (For example, if VBW and/or RBW are limited to 3 MHz, then the zero-span method of measuring duty cycle shall not be used if  $T \leq 16.7$  microseconds.)

### Duty Cycle Test Information

## A.2: 6dB Bandwidth

### 6dB Bandwidth Test Requirement

#### 15.407 e:

Within the 5.725-5.85 GHz band, the minimum 6 dB bandwidth of U-NII devices shall be at least 500 kHz

#### Emission bandwidth (EBW) in U-NII bands:

Band-crossing emissions: For an emission that crosses the boundary between two adjacent U-NII bands, the boundary frequency between the bands serves as one edge for defining the portion of the EBW that falls within a particular U-NII band. □However, the -26 dB points are measured relative to the highest point on the contiguous segment—regardless of which band contains that highest point (Figure3).

Figure 3. Emission Bandwidth (EBW) within a Band for Band-Crossing Signals

### A.3: 99% and 26dB Bandwidth

#### 99% and 26dB Bandwidth Test Requirement

There is no requirement for the value of bandwidth. However, the 26dB BW (EBW) is used to calculate the power limits in 15.407 (a) (2).

Power measurements are made using the 99% Bandwidth as the integration bandwidth.

Band-crossing emissions: For an emission that crosses the boundary between two adjacent U-NII bands, the boundary frequency between the bands serves as one edge for defining the portion of the EBW that falls within a particular U-NII band. □ However, the -26 dB points are measured relative to the highest point on the contiguous segment—regardless of which band contains that highest point (Figure4).

Figure 3. Emission Bandwidth (EBW) within a Band for Band-Crossing Signals

#### 99% and 26dB Bandwidth Test Procedure

The 99-percent occupied bandwidth is the frequency bandwidth such that, below its lower and above its upper frequency limits, the mean powers are each equal to 0.5 % of the total mean power of the given emission. Measurement of the 99-percent occupied bandwidth is required only as a condition for using the optional band-edge measurement techniques described in section II.G.3.d). Measurements of 99-percent occupied bandwidth may also optionally be used in lieu of the EBW to define the minimum frequency range over which the spectrum is integrated when measuring maximum conducted output power as described in section II.E. However, the EBW must be measured to determine bandwidth dependent limits on maximum conducted output power in accordance with 15.407(a).

## A.4: Maximum Conducted Output Power

### Maximum Conducted Output Power Test Requirement

#### 15.407 a) (3):

For the band 5.725-5.85 GHz, the maximum conducted output power over the frequency band of operation shall not exceed 1 W. If transmitting antennas of directional gain greater than 6 dBi are used, both the maximum conducted output power and the maximum power spectral density shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6 dBi. However, fixed point-to-point U-NII devices operating in this band may employ transmitting antennas with directional gain greater than 6 dBi without any corresponding reduction in transmitter conducted power. Fixed, point-to-point operations exclude the use of point-to-multipoint systems, omnidirectional applications, and multiple collocated transmitters transmitting the same information. The operator of the U-NII device, or if the equipment is professionally installed, the installer, is responsible for ensuring that systems employing high gain directional antennas are used exclusively for fixed, point-to-point operations.

#### Band-Crossing Signals:

When measuring the portion of the maximum conducted output power within a single U-NII band, the power shall be integrated across only the portion of the EBW that falls within that band. That is, if an EBW extends across the boundary between two adjacent bands, the boundary frequency between the bands serves as one edge of the frequency range to be integrated. Integration across an entire U-NII band without regard to 26 dB points is also acceptable for determining conducted output power within that band.

**Conducted output power within a U-NII band:** Integrate over the band or integrate over a span including the 26 dB EBWs of transmission segments within the band or integrate over 26 dB EBW of each transmission segment in the band and sum.

Allow the sweep to "free run".</li> <li>(ix) Trace average at least 100 traces in power averaging (i.e., RMS) mode; however, the number of traces to be averaged shall be increased above 100 as needed to ensure that the average accurately represents the true average over the on and off periods of the transmitter.</li> <li>(x) Compute power by integrating the spectrum across the EBW (or, alternatively, the entire 99% occupied bandwidth) of the signal using the instrument's band power measurement function with band limits set equal to the EBW (or occupied bandwidth)</li> </ol> |

The "measure-and-sum technique" is used for measuring in-band transmit power of a device. In the measure-and-sum approach, the conducted emission level is measured at each antenna port. The measured results at the various antenna ports are then summed mathematically to determine the total emission level from the device. Summing is performed in linear power units. ANSI C63.10 section 14.3.2.2

## A.5: Power Spectral Density

### Power Spectral Density Test Requirement

#### 15.407:

(3) For the band 5.725-5.85 GHz...the maximum power spectral density shall not exceed 30 dBm in any 500-kHz band. If transmitting antennas of directional gain greater than 6 dBi are used, both the maximum conducted output power and the maximum power spectral density shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6 dBi. However, fixed point-to-point U-NII devices operating in this band may employ transmitting antennas with directional gain greater than 6 dBi without any corresponding reduction in transmitter conducted power. Fixed, point-to-point operations exclude the use of point-to-multipoint systems, omnidirectional applications, and multiple collocated transmitters transmitting the same information. The operator of the U-NII device, or if the equipment is professionally installed, the installer, is responsible for ensuring that systems employing high gain directional antennas are used exclusively for fixed, point-to-point operations.

(5) The maximum power spectral density is measured as a conducted emission by direct connection of a calibrated test instrument to the equipment under test. If the device cannot be connected directly, alternative techniques acceptable to the Commission may be used. Measurements in the 5.725-5.85 GHz band are made over a reference bandwidth of 500 kHz or the 26 dB emission bandwidth of the device, whichever is less. Measurements in the 5.15-5.25 GHz, 5.25-5.35 GHz, and the 5.47-5.725 GHz bands are made over a bandwidth of 1 MHz or the 26 dB emission bandwidth of the device, whichever is less. A narrower resolution bandwidth can be used, provided that the measured power is integrated over the full reference bandwidth.

#### Band-Crossing Signals:

When measuring the portion of the maximum conducted output power within a single U-NII band, the power shall be integrated across only the portion of the EBW that falls within that band. That is, if an EBW extends across the boundary between two adjacent bands, the boundary frequency between the bands serves as one edge of the frequency range to be integrated. Integration across an entire U-NII band without regard to 26 dB points is also acceptable for determining conducted output power within that band.

**Conducted output power within a U-NII band:** Integrate over the band or integrate over a span including the 26 dB EBWs of transmission segments within the band or integrate over 26 dB EBW of each transmission segment in the band and sum.

**Figure 4. Conducted Output Power Measurement Examples**

**Power Spectral Density Test Procedure**

Ref. KDB 789033 D02 General UNII Test Procedures New Rules v02r01

F. Maximum Power Spectral Density (PSD)

ANSI C63.10:2013

**Power Spectral Density  
Test Procedure**

The rules requires “maximum power spectral density” measurements where the intent is to measure the maximum value of the time average of the power spectral density measured during a period of continuous transmission.

1. Create an average power spectrum for the EUT operating mode being tested by following the instructions in section II.E.2. for measuring maximum conducted output power using a spectrum analyzer or EMI receiver: select the appropriate test method (SA-1, SA-2, SA-3, or alternatives to each) and apply it up to, but not including, the step labeled, “Compute power...”. (This procedure is required even if the maximum conducted output power measurement was performed using a power meter, method PM.)

2. Use the peak search function on the instrument to find the peak of the spectrum and record its value.

3. Make the following adjustments to the peak value of the spectrum, if applicable: a) If Method SA-2 or SA-2 Alternative was used, add  $10 \log(1/x)$ , where  $x$  is the duty cycle, to the peak of the spectrum.

b) If Method SA-3 Alternative was used and the linear mode was used in step II.E.2.g)(viii), add 1 dB to the final result to compensate for the difference between linear averaging and power averaging.

4. The result is the Maximum PSD over 1 MHz reference bandwidth.

5. For devices operating in the bands 5.15-5.25 GHz, 5.25-5.35 GHz, and 5.47-5.725 GHz, the above procedures make use of 1 MHz RBW to satisfy directly the 1 MHz reference bandwidth specified in § 15.407(a)(5). **For devices operating in the band 5.725-5.85 GHz, the rules specify a measurement bandwidth of 500 kHz.**

(This ensures that bin-to-bin spacing is <math>\leq</math> RBW/2, so that narrowband signals are not lost between frequency bins.)</p> <p>(vi) Sweep time = auto.</p> <p>(vii) Detector = RMS (i.e., power averaging), if available. Otherwise, use sample detector mode.</p> <p>(viii) Do not use sweep triggering. Allow the sweep to “free run”.</p> <p>(ix) Trace average at least 100 traces in power averaging (i.e., RMS) mode; however, the number of traces to be averaged shall be increased above 100 as needed to ensure that the average accurately represents the true average over the on and off periods of the transmitter.</p> <p>(x) Compute power by integrating the spectrum across the EBW (or, alternatively, the entire 99% occupied bandwidth) of the signal using the instrument’s band power measurement function with band limits set equal to the EBW (or occupied bandwidth)</p> <p><b>F. Maximum Power Spectral Density (PSD)</b></p> <p>2. Use the peak search function on the instrument to find the peak of the spectrum and record its value.</p> <p>3. Make the following adjustments to the peak value of the spectrum, if applicable: a) If Method SA-2 or SA-2 Alternative was used, add <math>10 \log(1/x)</math>, where <math>x</math> is the duty cycle, to the peak of the spectrum.</p> <p>5. ... <b>For devices operating in the band 5.725-5.85 GHz, the rules specify a measurement bandwidth of 500 kHz.</b></p> |

The “measure-and-sum technique” is used for measuring in-band transmit power of a device. In the measure-and-sum approach, the conducted emission level is measured at each antenna port. The measured results at the various antenna ports are then summed mathematically to determine the total emission level from the device. Summing is performed in linear power units. ANSI C63.10 section 14.3.2.2

## A.6: Conducted Spurious Emissions

### Conducted Spurious Emissions Test Requirement

#### 15.407:

(b) Undesirable emission limits. Except as shown in paragraph (b)(7) of this section, the maximum emissions outside of the frequency bands of operation shall be attenuated in accordance with the following limits:

(4) For transmitters operating in the 5.725-5.85 GHz band:

(i) All emissions shall be limited to a level of -27 dBm/MHz at 75 MHz or more above or below the band edge increasing linearly to 10 dBm/MHz at 25 MHz above or below the band edge, and from 25 MHz above or below the band edge increasing linearly to a level of 15.6 dBm/MHz at 5 MHz above or below the band edge, and from 5 MHz above or below the band edge increasing linearly to a level of 27 dBm/MHz at the band edge.

(6) Unwanted emissions below 1 GHz must comply with the general field strength limits set forth in §15.209.

(7) The provisions of §15.205 apply to intentional radiators operating under this section.

#### 15.205 / 15.209:

Radiated emissions which fall in the restricted bands, as defined in Section 15.205(a), must also comply with the radiated emission limits specified in Section 15.209(a) (see Section 15.205(c)).

Use formula below to substitute conducted measurements in place of radiated measurements

$$E[\text{dB}\mu\text{V/m}] = \text{EIRP}[\text{dBm}] - 20 \log(d[\text{meters}]) + 104.77, \text{ where } E = \text{field strength and } d = 3 \text{ meter}$$

1) Average Plot, Limit= -41.25 dBm eirp

2) Peak plot, Limit = -21.25 dBm eirp

### Conducted Spurious Emissions Test Procedure

From KDB 789033 D02 General UNII Test Procedures New Rules v02r01

ANSI C63.10: 2013

| Conducted Spurious Emissions<br>Test Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| <ol style="list-style-type: none"> <li>1. Connect the antenna port(s) to the spectrum analyzer input.</li> <li>2. Place the radio in continuous transmit mode</li> <li>3. Configure Spectrum analyzer as per test parameters below (be sure to enter all losses between the transmitter output and the spectrum analyzer).</li> <li>4. Use the peak marker function to determine the maximum spurs amplitude level.</li> <li>5. Out-of-band and spurious emissions tests are performed on each output individually without summing or adding <math>10 \log(N)</math> since the measurements are made relative to the in-band emissions on the individual outputs. The worst-case output is recorded.</li> <li>6. Capture graphs and record pertinent measurement data.</li> </ol> <p>ISED:</p> <ol style="list-style-type: none"> <li>1. Connect the antenna port(s) to the spectrum analyzer input.</li> <li>2. Place the radio in continuous transmit mode</li> <li>3. Configure Spectrum analyzer as per test parameters below (be sure to enter all losses between the transmitter output and the spectrum analyzer).</li> <li>4. Use the peak marker function to determine the maximum spurs amplitude level.</li> <li>5. The "measure-and-sum technique" is used for measuring in-band transmit power of a device. In the measure-and-sum approach, the conducted emission level is measured at each antenna port. The measured results at the various antenna ports are then summed mathematically to determine the total emission level from the device. Summing is performed in linear power units. The worst-case output is recorded. (see ANSI C63.10:2013 section 14.3.2.2)</li> <li>6. Capture graphs and record pertinent measurement data.</li> </ol> |

The screenshot shows a Keysight Spectrum Analyzer interface. The main display area shows a spectrum plot with a peak at 5.996 GHz. The plot is labeled with 'Ref Level -7.63 dBm' and 'iVideo BW 3.0 MHz'. The plot shows a signal with a peak at 5.996 GHz and a smaller peak at 5.995 GHz. The plot is labeled with 'Mkr3 5.996 GHz -63.063 dBm'.

The top of the screen shows the 'Frequency' section with a 'Center Frequency' of 6.015000 GHz. The 'Span' is 11.970000 GHz. The 'Resolution' is 30.000000 Hz. The 'Step Freq' is 12.000000 GHz. The 'Auto Tune' button is visible.

The bottom of the screen shows a table of markers:

| Mode | Trace | Scale | X         | Y          | Function | Function Width | Function Value |
|------|-------|-------|-----------|------------|----------|----------------|----------------|
| 1    | N     | 1     | 5.764 GHz | -60.30 dBm |          |                |                |
| 2    | N     | 1     | 5.875 GHz | -66.84 dBm |          |                |                |
| 3    | N     | 1     | 5.996 GHz | -63.06 dBm |          |                |                |

## A.7: Conducted Bandedge

### Conducted Band Edge Test Requirement

#### 15.407:

(b) Undesirable emission limits. Except as shown in paragraph (b)(7) of this section, the maximum emissions outside of the frequency bands of operation shall be attenuated in accordance with the following limits:

(4) For transmitters operating in the 5.725-5.85 GHz band:

(i) All emissions shall be limited to a level of -27 dBm/MHz at 75 MHz or more above or below the band edge increasing linearly to 10 dBm/MHz at 25 MHz above or below the band edge, and from 25 MHz above or below the band edge increasing linearly to a level of 15.6 dBm/MHz at 5 MHz above or below the band edge, and from 5 MHz above or below the band edge increasing linearly to a level of 27 dBm/MHz at the band edge.

(6) Unwanted emissions below 1 GHz must comply with the general field strength limits set forth in §15.209.

(7) The provisions of §15.205 apply to intentional radiators operating under this section.

(8) When measuring the emission limits, the nominal carrier frequency shall be adjusted as close to the upper and lower frequency band edges as the design of the equipment permits

#### KDB 789033 D02 General UNII Test Procedures New Rules v02r01:

2. Unwanted Emissions that fall Outside of the Restricted Bands

a) For all measurements, follow the requirements in II.G.3. "General Requirements for Unwanted Emissions Measurements."

b) At frequencies below 1000 MHz, use the procedure described in II.G.4. "Procedure for Unwanted Emissions Measurements Below 1000 MHz."

c) At frequencies above 1000 MHz, use the procedure for maximum emissions described in II.G.5., "Procedure for Unwanted Emissions Measurements Above 1000 MHz."

(i) Sections 15.407(b)(1-3) specifies the unwanted emissions limit for the U-NII-1 and U-NII-2 bands. As specified, emissions above 1000 MHz that are outside of the restricted bands are subject to a peak emission limit of -27 dBm/MHz.3

(ii) Section 15.407(b)(4) specifies the unwanted emissions limit for the U-NII-3 band. A band emissions mask is specified in Section 15.407(b)(4)(i). The emission limits are based on the use of a peak detector.

|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <ol style="list-style-type: none"> <li>1. Connect the antenna port(s) to the spectrum analyzer input.</li> <li>2. Place the radio in continuous transmit mode. Use the procedures in KDB 789033 D02 General UNII Test Procedures New Rules v02r01 to substitute conducted measurements in place of radiated measurements.</li> <li>3. Configure Spectrum analyzer as per test parameters below (be sure to enter all losses between the transmitter output and the spectrum analyzer).</li> <li>4. Record the marker. Also measure any emissions in the restricted bands.</li> <li>5. The "measure-and-sum technique" is used for measuring in-band transmit power of a device. In the measure-and-sum approach, the conducted emission level is measured at each antenna port. The measured results at the various antenna ports are then summed mathematically to determine the total emission level from the device. Summing is performed in linear power units. The worst-case output is recorded.</li> <li>6. Place a marker at the end of the restricted band closest to the transmit frequency to show compliance. Also measure any emissions in the restricted bands</li> <li>7. Capture graphs and record pertinent measurement data.</li> </ol> |

## Appendix B: Emission Test Results

Testing Laboratory: Cisco Systems, Inc., 125 West Tasman Drive, San Jose, CA 95134, USA

### Radiated Emission Setup Diagram-Below 1G

### Radiated Emission Setup Diagram-Above 1G

## **B.1: Radiated Spurious Emissions**

### **FCC 15.205 | 15.407**

Radiated emissions which fall in the restricted bands, as defined in Section 15.205(a), must also comply with the radiated emission limits specified in Section 15.209(a) (see Section 15.205(c)).

Not covered by the scope of this test report.

## **B.2: Radiated Emissions 30MHz to 1GHz**

### **FCC 15.209 | 15.205 | 15.407**

Radiated emissions which fall in the restricted bands, as defined in Section 15.205(a), must also comply with the radiated emission limits specified in Section 15.209(a) (see Section 15.205(c)) and RSS-Gen §8.9.

**Ref.** ANSI C63.10: 2013 section 6.5

Not covered by the scope of this test report.

### **B.3: AC Conducted Emissions**

#### **FCC 15.207**

Except when the requirements applicable to a given device state otherwise, for any radio apparatus equipped to operate from the public utility AC power supply, either directly or indirectly (such as with a battery charger), the radio frequency voltage of emissions conducted back onto the AC power lines in the frequency range of 0.15 MHz to 30 MHz shall not exceed the limits shown in the table in these sections. The more stringent limit applies at the frequency range boundaries.

#### **Measurement Procedure**

##### **Accordance with ANSI C63.10:2013 section 6.2**

Not covered by the scope of this test report.

**Appendix C: List of Test Equipment Used to perform the test**

\*: Please note, formal testing did not occur during the time the temperature sensor CIS#58256 was being calibrated.

## Appendix D: Abbreviation Key and Definitions

The following table defines abbreviations used within this test report.

| Abbreviation | Description                                                          | Abbreviation | Description                         |
|--------------|----------------------------------------------------------------------|--------------|-------------------------------------|
| EMC          | Electro Magnetic Compatibility                                       | °F           | Degrees Fahrenheit                  |
| EMI          | Electro Magnetic Interference                                        | °C           | Degrees Celsius                     |
| EUT          | Equipment Under Test                                                 | Temp         | Temperature                         |
| ITE          | Information Technology Equipment                                     | S/N          | Serial Number                       |
| TAP          | Test Assessment Schedule                                             | Qty          | Quantity                            |
| ESD          | Electro Static Discharge                                             | emf          | Electromotive force                 |
| EFT          | Electric Fast Transient                                              | RMS          | Root mean square                    |

| GND          | Ground                                                               | kV           | Kilovolt ( $1 \times 10^3$ )        |
| L1           | Line 1                                                               | μV           | Microvolt ( $1 \times 10^{-6}$ )    |
| L2           | Line2                                                                | A            | Amp                                 |
| L3           | Line 3                                                               | μA           | Micro Amp ( $1 \times 10^{-6}$ )    |
| DC           | Direct Current                                                       | mS           | Milli Second ( $1 \times 10^{-3}$ ) |
| RAW          | Uncorrected measurement value, as indicated by the measuring device  | μS           | Micro Second ( $1 \times 10^{-6}$ ) |
| RF           | Radio Frequency                                                      | μS           | Micro Second ( $1 \times 10^{-6}$ ) |
| SLCE         | Signal Line Conducted Emissions                                      | m            | Meter                               |
| Meas dist    | Measurement distance                                                 | Spec dist    | Specification distance              |
| N/A or NA    | Not Applicable                                                       | SL           | Signal Line (or Telecom Line)       |
| P            | Power Line                                                           | L            | Live Line                           |
| N            | Neutral Line                                                         | R            | Return                              |
| S            | Supply                                                               | AC           | Alternating Current                 |

## Appendix E: Photographs of Test Setups

EUT Photos have been omitted from this test report. Photos can be found in the supplementary exhibit included in the submission and EDCS# 22609793.

## Appendix F: Software Used to Perform Testing

Cisco Internal LabView Radio Test Automation Software:

RF Automation Main versions: 230, 232, 233, 234, 236  
RF Domain Report Generation - version 3

## Appendix G: Test Procedures

Measurements were made in accordance with:

- KDB Publication No. 789033 - D02 General UNII Test Procedures New Rules v02r01
- KDB Publication No. 662911 - MIMO
- ANSI C63.4 2014 Unintentional Radiators
- ANSI C63.10 2013 Intentional Radiators

Test procedures are summarized below:

|                              |                |
|------------------------------|----------------|
| FCC 5GHz Test Procedures     | EDCS # 1445048 |
| FCC 5GHz RSE Test Procedures | EDCS # 1511600 |

## Appendix H: Scope of Accreditation (A2LA certificate number 1178-01)

The scope of accreditation of Cisco Systems, Inc. can be found on the A2LA web page at:

<http://www.a2la.org/scopepdf/1178-01.pdf>

## Appendix I: Test Assessment Plan

Compliance Test Plan (Excel) EDCS# 21468207  
Target Power Tables EDCS# 21389500

## Appendix J: Worst Case Justification

N/A
