Laboratory Introduction

SIEMIC, headquartered in the heart of Silicon Valley, with superior facilities in US and Asia, is one of the leading independent testing and certification facilities providing customers with one-stop shop services for Compliance Testing and Global Certifications.

In addition to testing and certification, SIEMIC provides initial design reviews and compliance management throughout a project. Our extensive experience with China, Asia Pacific, North America, European, and International compliance requirements, assures the fastest, most cost effective way to attain regulatory compliance for the global markets.

2 Executive Summary

The purpose of this test program was to demonstrate compliance of following product

Company:	Cisco Systems, Inc.
Product:	Cisco Wireless Router
FCC Host Model:	C1121X-8PLTEPWB
IC Host Model:	C1121X-8PLTEPWA

against the current Stipulated Standards. The specified model product stated above has demonstrated compliance with the Stipulated Standard listed on 1st page. This test report covers the radiated emissions requirements of the standards referenced in the report to allow system level approval of the module in specified Hosts.

6.1 EUT Description

Product Name	Cisco Wireless Router
FCC Host Model No.	C1121X-8PLTEPWB
IC Host Model No.	C1121X-8PLTEPWA
Trade Name	Cisco
Serial No.	FGL224410BU
Host Model No.	N/A
Input Power	12V AC/DC 6A
Power Adapter Manu/Model	DELTA ELECTRONICS, INC / ADP-150BR B
Power Adapter SN	N/A
Date of EUT received	01/14/2019
Equipment Class/ Category	DTS
Clock Frequencies	N/A
Port/Connectors	Power Port, Lan Port, USB Port, Micro-USB Port

6.2 Radio Description

Radio Type	802.11b/g/n/ac-20M
Operating Frequency	2412-2462MHz
Modulation	DSSS (CCK, DQPSK, DBPSK)
Channel Spacing	5MHz
Number of Channels	11
Antenna Type	Internal PIFA Antenna
Antenna Gain (Peak)	2.14 dBi
Antenna Connector Type	U.FL Connector

10 Measurements, Examination and Derived Results

10.1 Radiated Spurious Emissions in restricted band

Requirement(s):

Spec	Item	Requirement	Applicable
47CFR§15.247(d), RSS247(5.5)	a)	For non-restricted band, In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB or 30dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, determined by the measurement method on output power to be used. Attenuation below the general limits specified in § 15.209(a) is not required ☐ 20 dB down ☒ 30 dB down	☒
	b)	or restricted band, emission must also comply with the radiated emission limits specified in 15.209	☒
Test Setup			
Procedure	- The EUT was switched on and allowed to warm up to its normal operating condition. - The test was carried out at the selected frequency points obtained from the EUT characterisation. Maximization of the emissions, was carried out by rotating the EUT, changing the antenna polarization, and adjusting the antenna height in the following manner: - Vertical or horizontal polarisation (whichever gave the higher emission level over a full rotation of the EUT) was chosen. - The EUT was then rotated to the direction that gave the maximum emission. - Finally, the antenna height was adjusted to the height that gave the maximum emission. - An average measurement was then made for that frequency point. - Steps 2 and 3 were repeated for the next frequency point, until all selected frequency points were measured.

Procedure		1. 2. a. b. c. 3. 4. The EUT was switched on and allowed to warm up to its normal operating condition. The test was carried out at the selected frequency points obtained from the EUT characterisation. Maximization of the emissions, was carried out by rotating the EUT, changing the antenna polarization, and adjusting the antenna height in the following manner: a. Vertical or horizontal polarisation (whichever gave the higher emission level over a full rotation of the EUT) was chosen. b. The EUT was then rotated to the direction that gave the maximum emission. c. Finally, the antenna height was adjusted to the height that gave the maximum emission. A Quasi-peak measurement was then made for that frequency point. Steps 2 and 3 were repeated for the next frequency point, until all selected frequency points were measured.											
Remark		The EUT was scanned up to 1GHz. Both horizontal and vertical polarities were investigated. The results show only the worst case.

10.4 Receiver Spurious Emissions

Requirement(s):

Spec	Item	Requirement	Applicable							
RSS GEN 7.3	a)	Radiated emission measurements shall be performed with the receiver antenna connected to the receiver antenna ports. The search for spurious emissions shall be from the lowest frequency internally generated or used in the receiver (e.g. local oscillator, intermediate or carrier frequency), or 30 MHz, whichever is higher, to at least five times the highest tunable or local oscillator frequency, whichever is higher, without exceeding 40 GHz.	☒							
		Spurious emissions from receivers shall not exceed the radiated emissions limits shown in table 3

Test Setup	Semi Anechoic Chamber Radio Absorbing Material EUT 1.5m 3m Antenna 1-4m Ground Plane  Spectrum Analyzer									

Procedure	1. The EUT was switched on and allowed to warm up to its normal operating condition. 2. The test was carried out at the selected frequency points obtained from the EUT characterisation. Maximization of the emissions, was carried out by rotating the EUT, changing the antenna polarization, and adjusting the antenna height in the following manner: a. Vertical or horizontal polarisation (whichever gave the higher emission level over a full rotation of the EUT) was chosen. b. The EUT was then rotated to the direction that gave the maximum emission. c. Finally, the antenna height was adjusted to the height that gave the maximum emission. 3. A Quasi-peak measurement was then made for that frequency point. 4. Steps 2 and 3 were repeated for the next frequency point, until all selected frequency points were measured.
