Subject:           Request for additional information

1) Updated grant comment. Please include a statement about the device's European modes. Also please update the RF exposure statement to be consistent with SAR testing with a gap. Current statement suggests a BW accessory was used during testing.

**Acknowledged.**

2) Description of how the device speaker phone mode is expected to be used. If the device can be held to the face please provide associated SAR data.

**The speaker phone mode is designed for hands free operation giving user freedom to be typically 20...50 cm away from the handset. The handset has been tested keypad towards head phantom in touch position and antenna towards flat phantom with 2.2cm distance. The SAR results of above tests cover also speaker phone mode.**

3) Confirmation that the maximum number of time slots was used during SAR testing of the GPRS mode.

**This device was SAR tested using the maximum number of time slots in GPRS mode.**
