4. Equipment under test description.

*The customer provided description.

4.1 General description

BreezeMAX Extreme 5x is a high capacity, IP services oriented Broadband Wireless Access system. BreezeMAX Extreme 5x is digital modulated TDD system operating in the 4900MHz up to 5950MHz band. The system contains a Base station unit and a Subscriber unit.

Subscriber unit configuration:

The basic system configuration is a two-box configuration that contains

Indoor unit that contains a power supply and an Ethernet 10/100BaseT (RJ 45) interface.

Outdoor unit containing the entire radio and digital section.

A single CAT5 cable connecting the indoor and outdoor unit serves for carrying the data as well as for transferring power, management and control signals.

The subscriber indoor unit is a single power supply (55VDC) and Ethernet 10/100BaseT (RJ 45) interface.

4.1.1 Environmental evaluation and exposure limit according to FCC CFR 47 part 1, §1.1307, §1.1310

Limit for power density for general population/uncontrolled exposure is $1(\text{mW}/\text{cm}^2)$ or $10 (\text{W}/\text{m}^2)$.

The power density calculation is $S = (P_t / 4\pi r^2)$.

Where:

P_t - The transmitted power (EIRP) (mW)

r - The distance from the unit. (cm)

The limit $1(\text{mW}/\text{cm}^2)$ can be calculated from the above based on the following data:

P_t - the transmitted power which is equal to the output power 10.3 dBm plus internal antenna gain 17 dBi . The maximum EIRP = 27.3 dBm = 537 mW

Maximum allowed distance “ r ”, where RF exposure limits may not be exceeded, = $\text{SQRT}(537/4\pi)$ and is more than 6.5 cm from the antenna main lobe.

5.1 Transmitter characteristics

5.1.1 Peak output power test

Method of measurement DA 02-2138
 Operating Frequency Range 5.480 – 5.715 GHz
 Ambient Temperature 23⁰ C Relative Humidity 49% Air Pressure 1009 hPa

The peak transmit power shall not exceed the lesser of 250mW or 11dBm + 10 log B, where B is the 26 dB emission bandwidth in MHz. If transmitting antenna gain greater than 6 dBi the transmitter conducted output power must be reduced by amount in dB that the directional gain of the antenna exceeds 6 dBi.

Therefore calculated power limit is $11 + 10 \log 10.8 \text{ MHz} = 21.3 \text{ dBm} - (17 - 6) = 10.3 \text{ dBm}$

TEST PROCEDURE

Test was conducted at maximum allowed output power according to procedure DA 02-2138 August 2002. The measurements were performed at three transmitted carrier (channel) frequencies 5.480 GHz, 5.600 GHz and 5.715 GHz at bottom, middle and top of the 5.470 – 5.725 GHz frequency band under maximum data transfer bit rate. The EUT RF output was connected to the Spectrum Analyzer through appropriate attenuator and accounted with cable loss in SA settings.

The peak power spectral density shall not exceed 11 dBm in any 1 MHz band. If transmitting antennas of directional gain greater than 6 dBi are used, the transmitter conducted output power shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6 dBi. Therefore calculated PSD limit is $11 - (17-6) = 0$ dBm.

TEST PROCEDURE

The frequency spectrum was investigated from the lowest radio frequency signal generated in the equipment up to the tenth harmonic of the highest fundamental frequency. The transmitter output power was calculated as follow $21.3 \text{ dBm} - (17-6) = 10.3 \text{ dBm}$.

The emission levels of the EUT more than 20 dB lower than the specified limit were not recorded in the tables. For the test results refer to the tables and plots in this section.

Substitution method.

The measurements were performed according to ANSI/TIA-603-C-2004 section 2.2.12 test method. Investigation of transmitter spurious emissions was performed. EUT was replaced by generator and substitution antenna. Level calculated from generator output level, substitution antenna gain and loss of connected cable was compared with the limit. Measurements were performed with internal antenna in 3 carrier frequencies 5480 MHz; 5597.5 MHz; and 5715 MHz.

LIMIT

For transmitters operating in the 5.47 – 5.725 GHz band: all emissions outside of the 5.47 – 5.725 GHz band shall not exceed an EIRP of -27 dBm/MHz.

Method of measurement ANSI 63.4 §13.1.4
 Ambient Temperature 24° C Relative Humidity 55% Air Pressure 1012 hPa

TEST DESCRIPTION:

Test was performed at the Open Area Test Site at a 10 m measurement distance. The test configuration is shown in Fig.1. The EUT was arranged on a wooden table 0.8 m placed on the turn - table. The Biconilog antenna 30 MHz-2 GHz frequency range was used. The frequency range was investigated from 30 MHz to 1.0 GHz. The measurements were performed at each frequency at which the signal was 10 dB below the limit or less. The received level was maximized by initially rotating turntable through 360°, varying the antenna height between 1 m and 4 m, rerouting EUT cables and changing antenna polarization from vertical to horizontal.

REQUIREMENTS:

Spurious radiated emission shall not exceed value required in section 15.209

TEST RESULT:

Test results are presented in Table 1.

TEST PROCEDURE

EUT was placed on a wooden table in a shielded chamber at a height of 80 cm from the floor and 40 cm from the vertical reference plane. The measurements were performed at mains terminals by means of LISN, connected to spectrum analyzer in the frequency range as referred to in the table above. The measurements were made with quasi-peak (CISPR) and average detectors. The position of the EUT cables was varied to determine maximum emission level.

APPENDIX C General information.

Abbreviations and acronyms

The following abbreviations and acronyms are applicable to this test report:

AC	alternating current
cm	centimeter
dB	decibel
dBm	decibel referred to one milliwatt
dB(μ V)	decibel referred to one microvolt
dB(μ V/m)	decibel referred to one microvolt per meter
EMC	electromagnetic compatibility
EUT	equipment under test
GHz	gigahertz
H	height
Hz	hertz
kHz	kilohertz
L	length
LNA	low noise amplifier
m	meter
Mbps	megabit per second
MHz	megahertz
NA	not applicable
OFDM	Orthogonal Frequency Division Multiple Access
PRBS	pseudo random binary sequence
QP	quasi-peak
RF	radio frequency
RE	radiated emission
rms	root mean square
W	width
