

11/08/99

FCC ID: LOZ102038

Ref # EA94923

In response to your request for additional information.

- 1) The PCMICa card can operate at either 3.3 volt or 5 volt DC input.
- 2) This radio only supports the molded one piece antenna. Please disregard references in preliminary manual on other antennas. No external antenna can be used with this card. The final product will not include any antenna connectors accessible to the end user. (Please see attached picture)
- 3) The card will be factory programmed for the lowest power setting to comply with SAR requirements as set forth in the FCC rules under 15.247 and OET 65 C. This cannot be changed by the end user.
- 4) The higher power system (74mW) will be restricted for use in mobile devices only. This information will be provided to our resellers , VARs, and OEM customers as well as part of our training literature. (Currently Aironet does not sell directly to the general public). Again the radio power can only be set by the factory
