

EXHIBIT 10: RF Exposure Concerns

The transmitter covered in this report and application is of such low power that it presents no rf exposure hazard to the end user. The system into which this device is incorporated may include a wireless LAN device operating at output powers that do require rf safety concerns to be addressed.

The wireless LAN to be used will be a device with existing FCC approvals for mobile applications. The low output power level of the remote control transmitter relative to the output power of the wireless LAN will not affect the data submitted to the FCC for the wireless LAN.
