1 General Information

1.1 General Description

The equipment under test (EUT) is a receiver for doorbell. It operates at 433.92MHz and the oscillation of radio receiving circuit is generated by a crystal. The EUT is powered by DC 3V. When the EUT received the radio signal from transmitter, it will decode the signal and play the sound..

The brief circuit description is listed as follows:

- U6 and its associated circuit act as RF receiver
- Y1 and its associated circuit act as oscillator
- F1 and its associated circuit act as RF filter
- Q1, Q4 and its associated circuit act as audio amplifier
- U1, U5 and its associated circuit act as MCU
- U2 and its associated circuit act as flash memory

mast received the signal strength. The turntable was rotated to maximize the emission level. The antenna was then moving along the mast from 1m up to 4m until no more higher value was found. Both horizontal and vertical polarization of the antenna were placed and investigated.

For below 30MHz, a loop antenna with its vertical plane is placed 3m from the EUT and rotated about its vertical axis for maximum response at each azimuth about the EUT. And the centre of the

The device was rotated through three orthogonal axes to determine which attitude and configuration produce the highest emission during measurement.

A signal generator was used to radiate an unmodulated continuous wave (CW) signal to the EUT (super-regenerative receiver) at its operating frequency in order to “cohere” the characteristic

2.2 Test Result

Quasi-Peak Detector data was measured unless otherwise stated.

"#" means emissions appearing within the restricted bands shall follow the requirement of section 15.205.

The emissions meeting the requirement of section 15.109 are based on measurements employing the CISPR quasi-peak detector below 1000MHz and average detector for frequencies above 1000MHz

The frequencies from 30MHz to 1000MHz were investigated, and emission more than 20dB below limit were not reported. Thus thos highest emission were present in next page (section 2.3)

It was found that the EUT meet the FCC requirement.
