

RF Exposure Evaluation Report

Equipment under Test: Industrial Remote Control

Model No. : Alpha 604AJ, Alpha 604BJ

FCC ID : LZ6ALPHA604XJ

Manufacturer : Fomotech International Corp.

Applicant : Fomotech International Corp.

Address : 2F-1, 286-3, Hsin Ya Road, Chien Chen District,
Kaohsiung City 806, Taiwan, R.O.C.

Date of Receipt : April 26, 2021

Date of Report : July 19, 2021

Prepared by

Central Research Technology Co.

EMC Test Laboratory

No.11, Lane41, Fushuen St., Jungshan Chiu, Taipei, Taiwan, 104, R.O.C.

1 Requirement for Compliance

According to KDB 447498 D01, the SAR test exclusion condition is based on source-based time averaged maximum conducted output power, adjusted for tune-up tolerance, and the minimum test separation distance required for the exposure conditions. The SAR exclusion threshold is determined by the following formula.

1. For the test separation distance $\leq 50\text{mm}$

$$\frac{\text{Max. Tune up Power}_{(\text{mW})}}{\text{Min. Test Separation Distance}_{(\text{mm})}} \times \sqrt{f_{(\text{GHz})}} \leq 3.0$$

When the minimum test separation distance is $< 5\text{ mm}$, a distance of 5 mm is applied to determine SAR test exclusion.

2. For the test separation distance $> 50\text{ mm}$, and the frequency at 100 MHz to 1500MHz

$$\left[(\text{Threshold at } 50\text{ mm in Step 1}) + (\text{Test Separation Distance} - 50\text{ mm}) \times \left(\frac{f_{(\text{MHz})}}{150} \right) \right]_{(\text{mW})}$$
3. For the test separation distance $> 50\text{ mm}$, and the frequency at $> 1500\text{ MHz}$ to 6GHz

$$[(\text{Threshold at } 50\text{ mm in Step 1}) + (\text{Test Separation Distance} - 50\text{ mm}) \times 10]_{(\text{mW})}$$

Frequency Range (MHz)	Maximum Power		Antenna distance (mm)	Calculated Result (mW)	Limit (mW)
	(dBm)	(mW)			
902~928	3.15	2	5	0.38	3.0

2 Result

According to result, the SAR testing for this device is not required.
