

## Operating Description for T605

The device is a wireless transmitter. It is powered by 12Vdc battery and operating at 433.92MHz frequency range for both RX and TX.. The amplitude modulation (AM) technologic was used and a RF signal was transmitter when the button was pressed on the TX.

The CPU of the transmitter will encode for each key and modulated RF signal when the key pressed. After key release the CPU will stop encode and stop transmit signal at once.
