To Intertek Testing services
RE: ZSMOKE and ZCOMBO FCC TCB Application

This message serves as confirmation that the RF circuits used on our 2 models of Alarms (ZSMOKE and ZCOMBO) which are the subject of Intertek Report #101157672MIN-001 are identical both mechanically and electrically.

Further, our ZSMOKE Alarm is derived from the ZCOMBO Alarm by de-populating components used for the CO detection functional block in the circuit. The same PCB is used for both Alarms' "mother board" assemblies.

Best Regards,

Thomas McNelis
