

Dear Sir / Madam, Please find below responses.

Info and photos are still not clear that end-users will not remove strap/holster, therefore SAR test for "rear face" without strap and without strap-fastening screws is applicable - please explain and/or revise filing where appropriate.

Response: The strap/holster is not intended to be removed by end-users, a special screws are used for preventing users from removing it. Please see the page 46 / 117,Using Hand Strap 2-24, in the user manual.

Below SAR test results were tested under without strap and fixing screws, and the strap/holster does not contain any metallic components.
