

# FCC TEST REPORT

**REPORT NO.:** RF960910A10D

**MODEL NO.:** E100, E100N

**RECEIVED:** Sep. 11, 2007

**TESTED:** Oct. 1 ~ 2, 2007

**ISSUED:** July 17, 2008

**APPLICANT :** MITAC TECHNOLOGY CORP.

**ADDRESS :** 9 FL., NO. 75, SEC. 3 MING SHENG E. RD.,  
TAIPEI, TAIWAN, R.O.C.

**ISSUED BY :** Advance Data Technology Corporation

**LAB LOCATION:** No. 47, 14<sup>th</sup> Ling, Chia Pau Tsuen, Lin Kou Hsiang,  
Taipei Hsien, Taiwan, R.O.C.

This test report consists of 61 pages in total. It may be duplicated completely for legal use with the approval of the applicant. It should not be reproduced except in full, without the written approval of our laboratory. The client should not use it to claim product endorsement by TAF, A2LA or any government agencies. The test results in the report only apply to the tested sample.

## 1 CERTIFICATION

**PRODUCT:** Tablet PC  
**BRAND NAME:** MTC; GETAC  
**MODEL NO.:** E100, E100N  
**APPLICANT:** MITAC TECHNOLOGY CORP.  
**TESTED:** Oct. 1 ~ 2, 2007  
**TEST SAMPLE:** ENGINEERING SAMPLE  
**STANDARDS:** FCC Part 15, Subpart C (Section 15.247)  
ANSI C63.4-2003

The above equipment (Model: E100N) has been tested by **Advance Data Technology Corporation**, and found compliance with the requirement of the above standards. The test record, data evaluation & Equipment Under Test (EUT) configurations represented herein are true and accurate accounts of the measurements of the sample's EMC characteristics under the conditions specified in this report.

**PREPARED BY :** Jessica Cheng , **DATE:** July 17, 2008  
( Jessica Cheng / Specialist )

**TECHNICAL  
ACCEPTANCE :** Jamison Chan , **DATE:** July 17, 2008  
Responsible for RF ( Jamison Chan / Supervisor )

**APPROVED BY :** Ken Liu , **DATE:** July 17, 2008  
( Ken Liu / Deputy Manager )

## 2 SUMMARY OF TEST RESULTS

The EUT has been tested according to the following specifications:

| APPLIED STANDARD: FCC Part 15, Subpart C |                                                                                         |        |                                                                                |
|------------------------------------------|-----------------------------------------------------------------------------------------|--------|--------------------------------------------------------------------------------|
| Standard Section                         | Test Type and Limit                                                                     | Result | Remark                                                                         |
| 15.207                                   | AC Power Conducted Emission                                                             | PASS   | Meet the requirement of limit. Minimum passing margin is -15.33dB at 0.185MHz. |
| 15.247(a)(2)                             | Spectrum Bandwidth of a Direct Sequence Spread Spectrum System<br>Limit : min. 500kHz   | PASS   | Meet the requirement of limit.                                                 |
| 15.247(b)                                | Maximum Peak Output Power<br>Limit: max. 30dBm                                          | PASS   | Meet the requirement of limit.                                                 |
| 15.247(d)                                | Transmitter Radiated Emissions<br>Limit: Table 15.209                                   | PASS   | Meet the requirement of limit. Minimum passing margin is -2.74dB at 47.495MHz. |
| 15.247(e)                                | Power Spectral Density<br>Limit: max. 8dBm                                              | PASS   | Meet the requirement of limit.                                                 |
| 15.247(d)                                | Band Edge Measurement<br>Limit: 20 dB less than the peak value of fundamental frequency | PASS   | Meet the requirement of limit.                                                 |

### 2.1 MEASUREMENT UNCERTAINTY

Where relevant, the following measurement uncertainty levels have been estimated for tests performed on the EUT as specified in CISPR 16-4-2:

| Measurement         | Frequency    | Uncertainty |
|---------------------|--------------|-------------|
| Conducted emissions | 9kHz ~ 30MHz | 2.44 dB     |
| Radiated emissions  | 30MHz ~ 1GHz | 3.75 dB     |
|                     | 1GHz ~ 40GHz | 2.89 dB     |

This uncertainty represents an expanded uncertainty expressed at approximately the 95% confidence level using a coverage factor of k=2.

### 3 GENERAL INFORMATION

#### 3.1 GENERAL DESCRIPTION OF EUT

|                              |                                                                 |
|------------------------------|-----------------------------------------------------------------|
| <b>PRODUCT</b>               | Tablet PC                                                       |
| <b>MODEL NO.</b>             | E100, E100N                                                     |
| <b>FCC ID</b>                | MAUE03                                                          |
| <b>POWER SUPPLY</b>          | 12Vdc from adapter or 7.4Vdc from battery                       |
| <b>MODULATION TYPE</b>       | CCK, DQPSK, DBPSK for DSSS<br>64QAM, 16QAM, QPSK, BPSK for OFDM |
| <b>MODULATION TECHNOLOGY</b> | DSSS, OFDM                                                      |
| <b>TRANSFER RATE</b>         | 802.11b:11/5.5/2/1Mbps<br>802.11g: 54/48/36/24/18/12/9/6Mbps    |
| <b>FREQUENCY RANGE</b>       | 2412MHz ~ 2462MHz                                               |
| <b>NUMBER OF CHANNEL</b>     | 11                                                              |
| <b>MAXIMUM OUTPUT POWER</b>  | 45.290mW for 802.11b<br>22.699mW for 802.11g                    |
| <b>ANTENNA TYPE</b>          | PIFA antenna (UFL connector) with 0.70dBi gain                  |
| <b>DATA CABLE</b>            | Refer to user's manual                                          |
| <b>I/O PORTS</b>             | N/A                                                             |
| <b>ACCESSORY DEVICE</b>      | Refer to note 4 as below                                        |

#### NOTE:

1. The EUT is a Personal Computer with IEEE 802.11b/g and Bluetooth functions.

2. The EUT has following models as follows:

| Brand      | Model | Panel Size | Resolution | Differentiation              |
|------------|-------|------------|------------|------------------------------|
| MTC; GETAC | E100  | 8.4"       | 800 x 600  | Marketing<br>Differentiation |
|            | E100N | 8.9"       | 1024 x 768 |                              |

After pre-tested both models, found **model: E100N** was the worst, therefore, all test results came out from this.

3. This report covered IEEE 802.11b/g function. Bluetooth function showed in another report, which report no. is RF960910A10D-1.

4. The EUT was power supplied from the following power adapter and batteries:

| Item    | Brand     | Model          | Rating                                                                                                       |
|---------|-----------|----------------|--------------------------------------------------------------------------------------------------------------|
| Adapter | FSP       | FSP050-1AD101C | AC I/P: 100~240V, 1.3A, 50~60Hz<br>DC O/P: DC12V, 4.16A MAX<br>(50W MAX)<br>Non-shielded DC (1.8m), AC 2-pin |
| Battery | Panasonic | BP2S2P2550     | 7.2Vdc                                                                                                       |
| Battery | Sanyo     | BP2S2P2600     | 7.4Vdc                                                                                                       |

After pre-tested both batteries, found **Sanyo battery** was the worst, therefore, all test results came out from this.

5. The wireless LAN card, operates in the 2.4GHz frequency range, lets you connect IEEE 802.11g or IEEE 802.11b devices to the network. With its high-speed data transmissions of up to 54Mbps.

6. The above EUT information was declared by the manufacturer and for more detailed features description, please refer to the manufacturer's specifications or User's Manual.

## 3.2 DESCRIPTION OF TEST MODES

11 channels are provided to this EUT.

| CHANNEL | FREQ. (MHz) | CHANNEL | FREQ. (MHz) |
|---------|-------------|---------|-------------|
| 1       | 2412        | 7       | 2442        |
| 2       | 2417        | 8       | 2447        |

### 3.2.1 CONFIGURATION OF SYSTEM UNDER TEST

#### Mode A:

#### Mode B:

### 3.2.2 TEST MODE APPLICABILITY AND TESTED CHANNEL DETAIL

| EUT Configure Mode | Applicable to |       |                    |      | Description                                   |
|--------------------|---------------|-------|--------------------|------|-----------------------------------------------|
|                    | PLC           | RE<1G | RE <sup>3</sup> 1G | APCM |                                               |
| A                  | √             | √     | √                  | √    | EUT with adapter (Powered from adapter)       |
| B                  | Note          | √     | -                  | -    | EUT with Sanyo battery (Powered from battery) |

Where PLC: Power Line Conducted Emission RE<1G RE: Radiated Emission below 1GHz  
 RE≥1G: Radiated Emission above 1GHz APCM: Antenna Port Conducted Measurement

**NOTE:** No need to concern of Conducted Emission due to the EUT is powered by battery.

#### POWER LINE CONDUCTED EMISSION TEST:

- ☒ Pre-Scan has been conducted to determine the worst-case mode from all possible combinations between available modulations, data rates and antenna ports (if EUT with antenna diversity architecture).
- ☒ Following channel(s) was (were) selected for the final test as listed below.

| EUT Configure Mode | Mode    | Available Channel | Tested Channel | Modulation Technology | Modulation Type | Data Rate (Mbps) |
|--------------------|---------|-------------------|----------------|-----------------------|-----------------|------------------|
| A                  | 802.11b | 1 to 11           | 1, 6, 11       | DSSS                  | DBPSK           | 1                |

#### RADIATED EMISSION TEST (BELOW 1 GHz):

- ☒ Pre-Scan has been conducted to determine the worst-case mode from all possible combinations between available modulations, data rates, X,Y,Z Axis and antenna ports (if EUT with antenna diversity architecture).
- ☒ Following channel(s) was (were) selected for the final test as listed below.

| EUT Configure Mode | Mode    | Available Channel | Tested Channel | Modulation Technology | Modulation Type | Data Rate (Mbps) | AXIS |
|--------------------|---------|-------------------|----------------|-----------------------|-----------------|------------------|------|
| A                  | 802.11b | 1 to 11           | 1              | DSSS                  | DBPSK           | 1                | X    |
| B                  | 802.11b | 1 to 11           | 1              | DSSS                  | DBPSK           | 1                | X    |

#### RADIATED EMISSION TEST (ABOVE 1 GHz):

- ☒ Pre-Scan has been conducted to determine the worst-case mode from all possible combinations between available modulations, data rates, X,Y,Z Axis and antenna ports (if EUT with antenna diversity architecture).
- ☒ Following channel(s) was (were) selected for the final test as listed below.

| EUT Configure Mode | Mode    | Available Channel | Tested Channel | Modulation Technology | Modulation Type | Data Rate (Mbps) | AXIS |
|--------------------|---------|-------------------|----------------|-----------------------|-----------------|------------------|------|
| A                  | 802.11b | 1 to 11           | 1, 6, 11       | DSSS                  | DBPSK           | 1                | X    |
| A                  | 802.11g | 1 to 11           | 1, 6, 11       | OFDM                  | BPSK            | 6                | X    |

**BANDEDGE MEASUREMENT:**

- ☒ Pre-Scan has been conducted to determine the worst-case mode from all possible combinations between available modulations, data rates and antenna ports (if EUT with antenna diversity architecture).
- ☒ Following channel(s) was (were) selected for the final test as listed below.

| EUT Configure Mode | Mode    | Available Channel | Tested Channel | Modulation Technology | Modulation Type | Data Rate (Mbps) |
|--------------------|---------|-------------------|----------------|-----------------------|-----------------|------------------|
| A                  | 802.11b | 1 to 11           | 1, 11          | DSSS                  | DBPSK           | 1                |
| A                  | 802.11g | 1 to 11           | 1, 11          | OFDM                  | BPSK            | 6                |

**ANTENNA PORT CONDUCTED MEASUREMENT:**

- ☒ Pre-Scan has been conducted to determine the worst-case mode from all possible combinations between available modulations, data rates and antenna ports (if EUT with antenna diversity architecture).
- ☒ Following channel(s) was (were) selected for the final test as listed below.

| EUT Configure Mode | Mode    | Available Channel | Tested Channel | Modulation Technology | Modulation Type | Data Rate (Mbps) |
|--------------------|---------|-------------------|----------------|-----------------------|-----------------|------------------|
| A                  | 802.11b | 1 to 11           | 1, 6, 11       | DSSS                  | DBPSK           | 1                |
| A                  | 802.11g | 1 to 11           | 1, 6, 11       | OFDM                  | BPSK            | 6                |

### 3.3 GENERAL DESCRIPTION OF APPLIED STANDARDS

The EUT is a RF product. According to the specifications of the manufacturer, it must comply with the requirements of the following standards:

**FCC Part 15, Subpart C (15.247)**

**ANSI C63.4-2003**

All test items have been performed and recorded as per the above standards.

### 3.4 DESCRIPTION OF SUPPORT UNITS

The EUT has been tested as an independent unit together with other necessary accessories or support units. The following support units or accessories were used to form a representative test configuration during the tests.

| NO. | PRODUCT         | BRAND     | MODEL NO. | SERIAL NO.    | FCC ID           |
|-----|-----------------|-----------|-----------|---------------|------------------|
| 1   | USB<br>KEYBOARD | BTC       | 5200U     | G09302046659  | E5XKB5122U       |
| 2   | USB MOUSE       | MICROSOFT | X800898   | 9241804-30608 | FCC DoC Approved |

| NO. | SIGNAL CABLE DESCRIPTION OF THE ABOVE SUPPORT UNITS                                  |
|-----|--------------------------------------------------------------------------------------|
| 1   | 1.5 m braid shielded wire, terminated with USB connector via drain wire, w/o core.   |
| 2   | 1.8 m foil shielded wire, terminated with USB connector via drain wire, with 1 core. |

**NOTE:** All power cords of the above support units are non shielded (1.8m).

## 4 TEST TYPES AND RESULTS

### 4.1 CONDUCTED EMISSION MEASUREMENT

#### 4.1.1 LIMITS OF CONDUCTED EMISSION MEASUREMENT

| FREQUENCY OF EMISSION (MHz) | CONDUCTED LIMIT (dBμV) |          |
|-----------------------------|------------------------|----------|
|                             | Quasi-peak             | Average  |
| 0.15 ~ 0.5                  | 66 to 56               | 56 to 46 |
| 0.5 ~ 5                     | 56                     | 46       |
| 5 ~ 30                      | 60                     | 50       |

- NOTE:**
1. The lower limit shall apply at the transition frequencies.
  2. The limit decreases in line with the logarithm of the frequency in the range of 0.15 to 0.50 MHz.
  3. All emanations from a class A/B digital device or system, including any network of conductors and apparatus connected thereto, shall not exceed the level of field strengths specified above.

#### 4.1.2 TEST INSTRUMENTS

| DESCRIPTION & MANUFACTURER                                 | MODEL NO.       | SERIAL NO.   | CALIBRATED UNTIL |
|------------------------------------------------------------|-----------------|--------------|------------------|
| ROHDE & SCHWARZ Test Receiver                              | ESCS 30         | 838251/021   | Nov. 23, 2007    |
| ROHDE & SCHWARZ Artificial Mains Network (for EUT)         | ESH3-Z5         | 100218       | Nov. 21, 2007    |
| LISN With Adapter (for EUT)                                | AD10            | C10Ada-001   | Nov. 21, 2007    |
| ROHDE & SCHWARZ Artificial Mains Network (for peripherals) | ESH3-Z5         | 100219       | Nov. 07, 2007    |
| ROHDE & SCHWARZ Artificial Mains Network (for peripherals) | ESH3-Z5         | 100220       | Oct. 26, 2007    |
| Software                                                   | ADT_Conf_V7.3.2 | NA           | NA               |
| Software                                                   | ADT_ISN_V7.3.2  | NA           | NA               |
| RF cable (JYEBAO)                                          | 5D-FB           | Cable-C10.01 | Mar. 01, 2008    |
| SUHNTER Terminator (For ROHDE & SCHWARZ LISN)              | 65BNC-5001      | E1-010773    | Feb. 11, 2008    |

- NOTE:**
1. The calibration interval of the above test instruments is 12 months and the calibrations are traceable to NML/ROC and NIST/USA.
  2. The test was performed in ADT Shielded Room No. 10.
  3. The VCCI Site Registration No. C-1852.

### **4.1.3 TEST PROCEDURES**

- a. The EUT was placed 0.4 meters from the conducting wall of the shielded room with EUT being connected to the power mains through a line impedance stabilization network (LISN). Other support units were connected to the power mains through another LISN. The two LISNs provide 50 ohm/ 50uH of coupling impedance for the measuring instrument.
- b. Both lines of the power mains connected to the EUT were checked for maximum conducted interference.
- c. The frequency range from 150kHz to 30MHz was searched. Emission levels under (Limit - 20dB) were not recorded.

### **4.1.4 DEVIATION FROM TEST STANDARD**

No deviation.

#### 4.1.5 TEST SETUP

**Note: 1.**Support units were connected to second LISN.

**2.**Both of LISNs (AMN) are 80 cm from EUT and at least 80 from other units and other metal planes

For the actual test configuration, please refer to the attached file (Test Setup Photo).

#### 4.1.6 EUT OPERATING CONDITIONS

- a. Connected the EUT with an AC adapter placed on testing table.
- b. Set the EUT under transmission/receiving condition continuously at specific channel frequency.

## 4.1.7 TEST RESULTS

### CONDUCTED WORST-CASE DATA

|                          |                          |               |              |

| 2  | 0.252          | 0.20                    | 41.21         | -   | 41.41          | -   | 61.71     | 51.71 | -20.30 | -   |
| 3  | 0.310          | 0.20                    | 38.71         | -   | 38.91          | -   | 59.97     | 49.97 | -21.06 | -   |
| 4  | 0.435          | 0.21                    | 36.36         | -   | 36.57          | -   | 57.15     | 47.15 | -20.59 | -   |
| 5  | 4.688          | 0.43                    | 33.53         | -   | 33.96          | -   | 56.00     | 46.00 | -22.04 | -   |
| 6  | 20.219         | 1.41                    | 32.45         | -   | 33.86          | -   | 60.00     | 50.00 | -26.14 | -   |

- REMARKS:**
1. Q.P. and AV. are abbreviations of quasi-peak and average individually.
  2. "-": The Quasi-peak reading value also meets average limit and measurement with the average detector is unnecessary.
  3. The emission levels of other frequencies were very low against the limit.
  4. Margin value = Emission level - Limit value
  5. Correction factor = Insertion loss + Cable loss
  6. Emission Level = Correction Factor + Reading Value.

  6. Emission Level = Correction Factor + Reading Value.

## 4.2 RADIATED EMISSION MEASUREMENT

### 4.2.1 LIMITS OF RADIATED EMISSION MEASUREMENT

Emissions radiated outside of the specified bands, shall be according to the general radiated limits in 15.209 as following:

| Frequencies (MHz) | Field strength (microvolts/meter) | Measurement distance (meters) |
|-------------------|-----------------------------------|-------------------------------|
| 0.009-0.490       | 2400/F(kHz)                       | 300                           |
| 0.490-1.705       | 24000/F(kHz)                      | 30                            |
| 1.705-30.0        | 30                                | 30                            |
| 30-88             | 100                               | 3                             |
| 88-216            | 150                               | 3                             |
| 216-960           | 200                               | 3                             |
| Above 960         | 500                               | 3                             |

**NOTE:**

1. The lower limit shall apply at the transition frequencies.
2. Emission level (dBuV/m) = 20 log Emission level (uV/m).
3. As shown in 15.35(b), for frequencies above 1000MHz, the field strength limits are based on average detector, however, the peak field strength of any emission shall not exceed the maximum permitted average limits, specified above by more than 20dB under any condition of modulation.

## 4.2.2 TEST INSTRUMENTS

| DESCRIPTION & MANUFACTURER        | MODEL NO.                | SERIAL NO.           | CALIBRATED UNTIL |
|-----------------------------------|--------------------------|----------------------|------------------|
| HP Preamplifier                   | 8447D                    | 2432A03504           | May 09, 2008     |
| HP Preamplifier                   | 8449B                    | 3008A01292           | Aug. 05, 2008    |
| ROHDE & SCHWARZ TEST RECEIVER     | ESI7                     | 836697/012           | Oct. 24, 2007    |

| Software                          | ADT_Radiated_V<br>7.6.15 | NA                   | NA               |
| SUHNER RF cable                   | SF104-26.5               | CABLE-CH6-17<br>m-01 | Dec. 11, 2007    |
| ROHDE & SCHWARZ Spectrum Analyzer | FSP 40                   | 100036               | Mar. 13, 2008    |

- NOTE:**
1. The calibration interval of the above test instruments is 12 months. And the calibrations are traceable to NML/ROC and NIST/USA.
  2. The horn antenna and HP preamplifier (model: 8449B) are used only for the measurement of emission frequency above 1GHz if tested.
  3. The test was performed in ADT Chamber No. 6.
  4. The Industry Canada Reference No. IC 3789-6.

### 4.2.3 TEST PROCEDURES

- a. The EUT was placed on the top of a rotating table 0.8 meters above the ground at a 3 meters semi-anechoic chamber. The table was rotated 360 degrees to determine the position of the highest radiation.
- b. The EUT was set 3 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower.
- c. The antenna is a broadband antenna, and its height is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement.
- d. For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters and the rotatable table was turned from 0 degrees to 360 degrees to find the maximum reading.
- e. The test-receiver system was set to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode.
- f. If the emission level of the EUT in peak mode was lower than the limit specified, then testing could be stopped and the peak values of the EUT would be reported. Otherwise the emissions would be re-tested one by one using peak, quasi-peak method or average method as specified and then reported in data sheet.

**NOTE:**

1. The resolution bandwidth of test receiver/spectrum analyzer is 120kHz for Quasi-peak detection at frequency below 1GHz.
2. The resolution bandwidth is 1MHz and video bandwidth of test receiver/spectrum analyzer is 3MHz for Peak detection at frequency above 1GHz. The resolution bandwidth of test receiver/spectrum analyzer is 1 MHz for Average detection (AV) at frequency above 1GHz.
3. For measurement of frequency above 1000 MHz, the EUT was set 3 meters away from the interference-receiving antenna.

### 4.2.4 DEVIATION FROM TEST STANDARD

No deviation.

## 4.2.5 TEST SETUP

For the actual test configuration, please refer to the attached file (Test Setup Photo).

## 4.2.6 EUT OPERATING CONDITIONS

Same as item 4.1.6.

## 4.2.7 TEST RESULTS

### RADIATED WORST-CASE DATA: 802.11b DSSS MODULATION (BELOW 1GHz)

  4. Margin value = Emission level – Limit value.

## 4.3 6dB BANDWIDTH MEASUREMENT

### 4.3.1 LIMITS OF 6dB BANDWIDTH MEASUREMENT

The minimum of 6dB Bandwidth Measurement is 0.5 MHz.

### 4.3.2 TEST INSTRUMENTS

| DESCRIPTION & MANUFACTURER | MODEL NO. | SERIAL NO. | CALIBRATED UNTIL |
|----------------------------|-----------|------------|------------------|
| SPECTRUM ANALYZER          | FSP 40    | 100036     | Mar. 13, 2008    |

**NOTE:** The calibration interval of the above test instruments is 12 months and the calibrations are traceable to NML/ROC and NIST/USA.

### 4.3.3 TEST PROCEDURE

The transmitter output was connected to the spectrum analyzer through an attenuator. The bandwidth of the fundamental frequency was measured by spectrum analyzer with 100 kHz RBW and 300kHz VBW. The 6dB bandwidth is defined as the total spectrum the power of which is higher than peak power minus 6dB.

### 4.3.4 DEVIATION FROM TEST STANDARD

No deviation.

#### 4.3.5 TEST SETUP

For the actual test configuration, please refer to the related Item – Photographs of the Test Configuration.

#### 4.3.6 EUT OPERATING CONDITIONS

The software provided by client to enable the EUT under transmission condition continuously at lowest, middle and highest channel frequencies individually.

## 4.3.7 TEST RESULTS

## 4.4 MAXIMUM PEAK OUTPUT POWER

### 4.4.1 LIMITS OF MAXIMUM PEAK OUTPUT POWER MEASUREMENT

The Maximum Peak Output Power Measurement is 30dBm.

### 4.4.2 TEST INSTRUMENTS

| Description & Manufacturer           | Model No. | Serial No. | Calibrated Until |
|--------------------------------------|-----------|------------|------------------|
| ROHDE & SCHWARZ<br>Spectrum Analyzer | FSP 40    | 100036     | Mar. 13, 2008    |
| ROHDE & SCHWARZ<br>Signal Generator  | SMR 40    | 100231     | Mar. 27, 2008    |
| Tektronix Oscilloscope               | TDS1012   | C019167    | Jan. 16, 2008    |
| Narda Detector                       | 4503A     | FSCM99899  | NA               |

**NOTE:** The calibration interval of the above test instruments is 12 months and the calibrations are traceable to NML/ROC and NIST/USA.

### 4.4.3 TEST PROCEDURES

1. A detector was used on the output port of the EUT. An oscilloscope was used to peak the response of the detector.
2. Replaced the EUT by the signal generator. The center frequency of the S.G was adjusted to the center frequency of the measured channel.
3. Adjusted the power to have the same peak reading on oscilloscope. Record the power level.

### 4.4.4 DEVIATION FROM TEST STANDARD

No deviation.

### 4.4.5 TEST SETUP

### 4.4.6 EUT OPERATING CONDITIONS

Same as 4.3.6.

## 4.4.7 TEST RESULTS

## 4.5 POWER SPECTRAL DENSITY MEASUREMENT

### 4.5.1 LIMITS OF POWER SPECTRAL DENSITY MEASUREMENT

The Maximum of Power Spectral Density Measurement is 8dBm.

### 4.5.2 TEST INSTRUMENTS

| DESCRIPTION & MANUFACTURER | MODEL NO. | SERIAL NO. | CALIBRATED UNTIL |
|----------------------------|-----------|------------|------------------|
| R&S SPECTRUM ANALYZER      | FSP 40    | 100036     | Mar. 13, 2008    |

**NOTE:** The calibration interval of the above test instruments is 12 months and the calibrations are traceable to NML/ROC and NIST/USA.

### 4.5.3 TEST PROCEDURE

The transmitter output was connected to the spectrum analyzer through an attenuator, the bandwidth of the fundamental frequency was measured with the spectrum analyzer using 3kHz RBW and 30kHz VBW, set sweep time = span/3kHz. The power spectral density was measured and recorded.

The sweep time is allowed to be longer than span/3kHz for a full response of the mixer in the spectrum analyzer.

### 4.5.4 DEVIATION FROM TEST STANDARD

No deviation.

### 4.5.5 TEST SETUP

### 4.5.6 EUT OPERATING CONDITIONS

Same as 4.3.6.

## 4.5.7 TEST RESULTS

### 802.11b DSSS MODULATION

|                      |               |                          |                          |

## 4.6 BAND EDGES MEASUREMENT

### 4.6.1 LIMITS OF BAND EDGES MEASUREMENT

Below -20dB of the highest emission level of operating band (in 100kHz Resolution Bandwidth).

### 4.6.2 TEST INSTRUMENTS

| DESCRIPTION & MANUFACTURER | MODEL NO. | SERIAL NO. | CALIBRATED UNTIL |
|----------------------------|-----------|------------|------------------|
| R&S SPECTRUM ANALYZER      | FSP 40    | 100036     | Mar. 13, 2008    |

**NOTE:** The calibration interval of the above test instruments is 12 months and the calibrations are traceable to NML/ROC and NIST/USA.

### 4.6.3 TEST PROCEDURE

The transmitter output was connected to the spectrum analyzer via a low loss cable. Set both RBW and VBW of spectrum analyzer to 100kHz and 300kHz with suitable frequency span including 100MHz bandwidth from band edge. The band edges was measured and recorded.

The spectrum plots (Peak RBW=100kHz, VBW=300kHz; Average RBW=1MHz, VBW= 10Hz) are attached on the following pages.

### 4.6.4 DEVIATION FROM TEST STANDARD

No deviation.

### 4.6.5 EUT OPERATING CONDITION

Same as 4.3.6.

## 4.6.6 TEST RESULTS

The spectrum plots are attached on the following 12 images. D1 line indicates the highest level, and D2 line indicates the 20dB offset below D1. It shows compliance with the requirement in part 15.247(d).

### 802.11b DSSS MODULATION

**NOTE 1:** The band edge emission plot on the next page shows 47.55dBc between carrier maximum power and local maximum emission in restrict band (2.3360GHz). The emission of carrier strength list in the test result of channel 1 at the item 4.2.7 is 106.08dBuV/m (Peak), so the maximum field strength in restrict band is  $106.08 - 47.55 = 58.53\text{dBuV/m}$  which is under 74dBuV/m limit.

The band edge emission plot of on the next page shows 50.68dBc between carrier maximum power and local maximum emission in restrict band (2.3350GHz). The emission of carrier strength list in the test result of channel 1 at the item 4.2.7 is 101.32dBuV/m (Average), so the maximum field strength in restrict band is  $101.32 - 50.68 = 50.64\text{dBuV/m}$  which is under 54dBuV/m limit.

**NOTE 2:** The band edge emission plot on the next second page shows 47.53dBc between carrier maximum power and local maximum emission in restrict band (2.4876GHz). The emission of carrier strength list in the test result of channel 11 at the item 4.2.7 is 104.64dBuV/m (Peak), so the maximum field strength in restrict band is  $104.64 - 47.53 = 57.11\text{dBuV/m}$  which is under 74dBuV/m limit.

The band edge emission plot on the next third page shows 51.60dBc between carrier maximum power and local maximum emission in restrict band (2.4876GHz). The emission of carrier strength list in the test result of channel 11 at the item 4.2.7 is 100.29dBuV/m (Average), so the maximum field strength in restrict band is  $100.29 - 51.60 = 48.69\text{dBuV/m}$  which is under 54dBuV/m limit.

### 802.11g OFDM MODULATION

**NOTE 1:** The band edge emission plot on the next page shows 41.24dBc between carrier maximum power and local maximum emission in restrict band (2.3258GHz). The emission of carrier strength list in the test result of channel 1 at the item 4.2.7 is 103.02dBuV/m (Peak), so the maximum field strength in restrict band is  $103.02 - 41.24 = 61.78\text{dBuV/m}$  which is under 74dBuV/m limit.

The band edge emission plot of on the next page shows 48.19dBc between carrier maximum power and local maximum emission in restrict band (2.3250GHz). The emission of carrier strength list in the test result of channel 1 at the item 4.2.7 is 92.61dBuV/m (Average), so the maximum field strength in restrict band is  $92.61 - 48.19 = 44.42\text{dBuV/m}$  which is under 54dBuV/m limit.

**NOTE 2:** The band edge emission plot on the next second page shows 42.25dBc between carrier maximum power and local maximum emission in restrict band (2.4850GHz). The emission of carrier strength list in the test result of channel 11 at the item 4.2.7 is 101.71dBuV/m (Peak), so the maximum field strength in restrict band is  $101.71 - 42.25 = 59.46\text{dBuV/m}$  which is under 74dBuV/m limit.

The band edge emission plot on the next third page shows 47.96dBc between carrier maximum power and local maximum emission in restrict band (2.4835GHz). The emission of carrier strength list in the test result of channel 11 at the item 4.2.7 is 90.83dBuV/m (Average), so the maximum field strength in restrict band is  $90.83 - 47.96 = 42.87\text{dBuV/m}$  which is under 54dBuV/m limit.

## **4.7 ANTENNA REQUIREMENT**

### **4.7.1 STANDARD APPLICABLE**

For intentional device, according to FCC 47 CFR Section 15.203, an intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device.

And according to FCC 47 CFR Section 15.247 (b), if transmitting antennas of directional gain greater than 6dBi are used, the power shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6dBi.

### **4.7.2 ANTENNA CONNECTED CONSTRUCTION**

The antenna type used in this product is PIFA antenna with UFL connector. The maximum Gain of the antenna is -0.15dBi gain.
