TEST REPORT

Report No: KST-FCR-160005(1)

Applicant	Name	Midland Radio Corporation
	Address	5900 Parretta Drive, Kansas City, Missouri United States 64120
Manufacturer	Name	Global Link Corporation Ltd.
	Address	Room 13B, China, Minmentals Tower, 79 Chatham Road South, Tsim Sha Tsui, Kowloon, Hong Kong
Equipment	Name	GMRS / FRS
	Model No	LXT600PA
	Brand	None
	FCC ID	MMALXT600PA
Test Standard	FCC CFR 47, Part 95 RSS-210 ANSI/TIA-603-D-2010	
Received Date	2016. 06. 24	
Test Date(s)	2016. 06. 27 - 2016. 06. 28	
Issue Date	2016. 06. 29	
Test Result	Compliance	
Note	-	

Supplementary Information

The device bearing the brand name and FCC ID specified above has been shown to comply with the applicable technical standards as indicated in the measurement report and was tested in accordance with measurement procedures specified in ANSI/TIA-603-D-2010.

We attest to the accuracy of data and all measurements reported herein were performed by KOSTEC Co., Ltd. and were made under Chief Engineer's supervision. We assume full responsibility for the completeness of these measurements and vouch for the qualifications of all persons taking them.

Tested by	Lee, Mi-Young	Approved by	Park, Gyeong-Hyeon

1. GENERAL INFORMATION

1.1 Test Facility

Test laboratory and address

KOSTEC Co., Ltd.

128(175-20,Annyeong-dong)406-gil sejaro, Hwaseong-si Gyeonggi-do, Korea

The open area field test site and conducted measurement facility are used for these testing. This site at was fully described in a reports submitted to the Federal Communications Commission (FCC).

The facility also complies with the radiated and conducted test site criteria set forth in ANSI C 63.4-2014 and ANSI/TIA-603-D-2010.

The Federal Communications Commission (FCC) has the reports on file and KOSTEC Co., Ltd. is listed under FCC Registration No.525762. The test site has been approved by the FCC for public use and is List in the FCC Public Access Link CORES (Commission Registration System)

Registration information

KCC (Korea Communications Commission) Number : KR0041

KOLAS(Korea Laboratory Accreditation Scheme) Number : 232

FCC Registration Number(FRN) : 525762

IC Registration Site Number : 8305A

1.2 Location

Head office & Test Lab: 28(175-20,Annyeong-dong)
406-gil sejaro, Hwaseong-si Gyeonggi-do, Korea
Tel: +82-31-222-4251 / Fax: +82-31-222-4252

2. EQUIPMENT DESCRIPTION

The product specification described herein was declared by manufacturer. And refer to user's manual for the details.

Equipment Name	GMRS / FRS
Model No	LXT600PA
Type of Equipment	Family Radio Face Held Transmitter
Intended Operating Environment	General population/Uncontrolled exposure
Serial Number	Prototype
Primary User Functions of EUT	2-Way Wireless Voice Communication
Rated output power	0.6 W (GMRS) / 0.4 W (FRS)
Max. E.R.P	0.74 W (GMRS) / 0.45 W (FRS)
Operating Frequency Range	GMRS/FRS : 462.562 5 MHz - 462.712 5 MHz FRS : 467.562 5 MHz - 467.712 5 MHz GMRS : 462.550 0 MHz - 462.725 0 MHz
Channel Number	22 EA
Channel Spacing	12.5 kHz
Modulation	FM
Occupied Bandwidth (99%)	9.92 kHz (GMRS) / 9.79 kHz (FRS)
Emission Designation	11K0F3E
Power Source	Ni-MH battery pack / 3.6 VDC nominal / 700 mAh
Antenna Description	Fixed external antenna, 0.5 dBi
FCC ID	MMALXT600PA
IC ID	3690A-LXT600PA
Remark	The above DUT's information was declared by manufacturer. Please refer to the specifications or user manual for more detailed description.

Head office & Test Lab: 28(175-20,Annyeong-dong)
406-gil sejaro, Hwaseong-si Gyeonggi-do, Korea
Tel: +82-31-222-4251 / Fax: +82-31-222-4252

3. SYSTEM CONFIGURATION FOR TEST

3.1 Characteristics of equipment

The Equipment Under Test (EUT) is a Two Ways Radio of GMRS, FRS.

3.2 Used peripherals list

Description	Model No.	Serial No.	Manufacture	Remark
AC/DC adaptor	S004LV090030	None	Midland Radio Corporation	
Charger	18CVP12	None	Midland Radio Corporation	
Battery	BATT3R	None	Midland Radio Corporation	
ear/mic	AVP-1	None	Midland Radio Corporation	

3.3 Product Modification

N/A

3.4 Operating Mode

* Constantly transmitting with a carrier at maximum power.

3.5 Test Setup of EUT

The measurements were taken in continuous transmit mode.

5. MEASUREMENT RESULTS

5.1 RF Output Power

5.1.1 Standard Applicable [FCC Part 95.639(a)(d) / RSS-210 A6.1.4,A6.2.4]

FCC Part 95.639(a) A GMRS transmitter may transmit with a maximum power of 5.0 W e.r.p.

FCC Part 95.639(d) For FRS, the maximum permissible transmitter output power under any operating conditions is 0.5 W effective radiated power (e.r.p.).

RSS-210 A6.1.4 The maximum permissible transmitter output power under any operating conditions is 0.5 W effective radiated power (e.r.p.). The radio shall be equipped with an integral antenna.

RSS-210 A6.2.4 A GMRS transmitter may transmit with a maximum power of 2 W e.r.p.

5.1.2 Test Environment conditions

- Ambient temperature : (25 - 26) ℃
- Relative Humidity : (65 - 67) % R.H.

5.1.3 Measurement Procedure

The EUT was setup according to ANSI/TIA 603D:2010 for compliance to FCC 47CFR part 95 requirements.

As a below test procedure (①~⑬), The result value of measurement is performed to condition of the below; The EUT will operate in continuous transmission mode during the time necessary to perform the measured of the frequency. Substitution method was performed to determine the actual P_{erp}(or P_{eirp}) emission levels of the EUT.

The following test procedure as below;

The test is performed in a fully pyramidal chamber to determine the accurate frequencies, after maximum emissions level will be checked on a test chamber and measuring distance is 3 m from EUT to test antenna.

① The EUT was set on with continuous transmission mode and placed on a 1.5 meter high non-conductive table on the chamber.

② The test antenna is used on Bi-Log antenna at above 30 ㎒, and used on Horn antenna at 1 ㎓ and then the measurements are repeated with the test antenna for vertical and horizontal polarization. The output of the test antenna will be connected to a measuring receiver, and it is set to tuned over the required standard measuring frequency range.

③ At each frequency at which a relevant spurious component is detected, the test antenna will be raised and lowered through the specified range of heights until an maximum signal level is detected on the measuring receiver.

④ The EUT is position x, y, z axis on rotating through 360 degrees in the horizontal plane, until the Max. signal level is detected by the measuring receiver.

⑤ The receiver is scanned from requested measuring frequency band and then the maximum meter reading is recorded. The radiated emissions were measured with requested standard specification (detector and resolution bandwidth etc.)

⑥ The EUT was then removed and replaced with substitution antenna .The center of the antenna was approximately at the same location as the center of the EUT, and calibrated for the frequency of the spurious component detected.

⑦ Signal generator output port connected with substitution antenna input port. If necessary, may use shield cable between signal generator and substitution antenna

⑧ The frequency of the calibrated signal generator is set to frequency of the spurious component detected, and the input attenuator setting of the measuring receiver was adjust in order to increase the sensitivity of the measuring receiver, if necessary

Head office & Test Lab: 28(175-20,Annyeong-dong)
406-gil sejaro, Hwaseong-si Gyeonggi-do, Korea
Tel: +82-31-222-4251 / Fax: +82-31-222-4252

⑨ The test antenna was raised and lowered through the specified range of heights to ensure that maximum signal is received.

⑩ The input signal to the substitution antenna was be adjusted until an equal or a known related level to that detected from the transmitter is obtained on the measuring receiver.

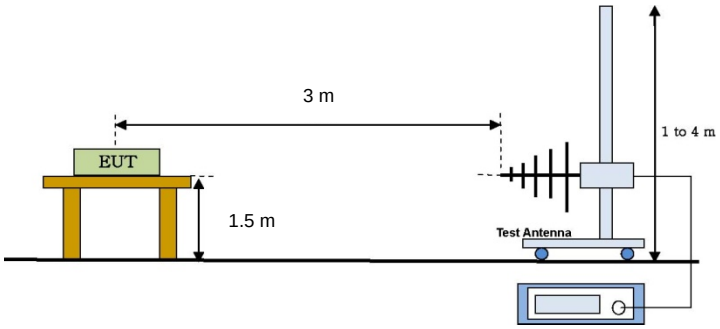
⑪ The input signal to the substitution antenna was be recorded as a power level and corrected for any change of input attenuator setting of the measuring receiver

⑫ The measure of P_{erp}(or P_{eirp}) the spurious components is the larger of the two power levels recorded for each spurious component at the input to the substitution antenna, corrected for the gain of the substitution antenna, if necessary.

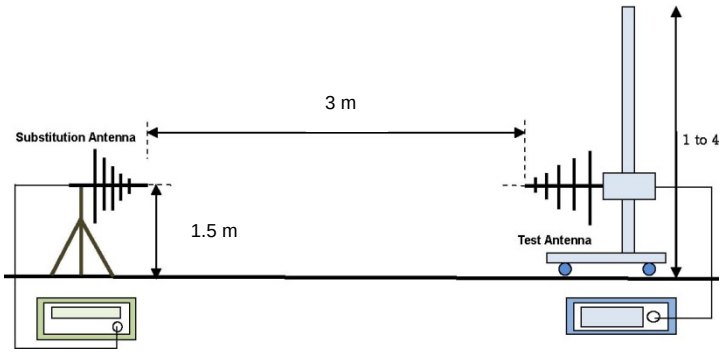
⑬ It is correction to signal generator's offset value. In this case of P_{erp}(or P_{eirp}) shall calculated as follow as formula ;

• P_{erp}(or P_{eirp}) = Signal generator level (㏈m) – Cable loss(㏈)

5.1.5 Test Setup



[Radiated measurement setup_Below than 1 ㎓]



[Effective Radiated Power measurement setup]

※ Above the test antenna is used on Horn antenna at above 1 ㎓.

5.2 Modulation Characteristecs

5.2.1 Standard Applicable [FCC Part 95.637(a)(b), Part 2.1047(a) / RSS-210 A6.1.2, A6.2.2]

Part 95.637(a) A GMRS transmitter that transmits emission type F3E must not exceed a peak frequency deviation of plus or minus 5 kHz. A FRS unit that transmits emission type F3E must not exceed a peak frequency deviation of plus or minus 2.5 kHz, and the audio frequency response must not exceed 3.125 kHz.

Part 95.637(b) Each GMRS transmitter, except a mobile station transmitter with a power output of 2.5 W or less, must automatically prevent a greater than normal audio level from causing over-modulation. The transmitter also must include audio frequency low pass filtering, unless it complies with the applicable paragraphs of § 95.631 (without filtering.) The filter must be between the modulation limiter and the modulated stage of the transmitter. At any frequency (f in kHz) between 3 and 20 kHz, the filter must have an attenuation of at least 60 log10 (f/3) dB greater than the attenuation at 1 kHz. Above 20 kHz, it must have an attenuation of at least 50 dB greater than the attenuation at 1 kHz.

Part 2.1047(a) A curve or equivalent data showing the frequency response of the audio modulating circuit over a range of 100 to 5000 Hz shall be submitted. For equipment required to have an audio low-pass filter, a curve showing the frequency response of the filter, or of all circuitry installed between the modulation limiter and the modulated stage shall be submitted.

RSS-210 A6.1.2 (c) The peak frequency deviation shall not exceed ±2.5 kHz. The limiter shall be followed by a low-pass filter to remove unwanted harmonics.

RSS-210 A6.2.2 (b) For emission types F1D, G1D, G3E, F3E or F2D, the peak frequency deviation shall not exceed ±5 kHz. GMRS transmitters must include an audio frequency low-pass filter, unless they comply with the appropriate emission masks in Section A6.2.5 below. The filter must be between the modulation limiter and the modulated stage of the transmitter. The filter attenuation must be as follows: for 3 kHz ≤ f ≤ 20 kHz, the attenuation is at least 60 log10(f, kHz/3) dB greater than the attenuation at 1 kHz; and for f > 20 kHz, the attenuation is at least 50 dB greater than the attenuation at 1 kHz.

5.2.2 Test Environment conditions

- Ambient temperature : (25 - 26) ℃
- Relative Humidity : (65 - 67) % R.H.

5.2.3 Measurement Procedure

- **Modulation Limit**

The carrier frequency deviation was measured with the tone adjust the audio input for 60 % of rated system deviation at 1 kHz using this level as a reference (0 dB) and vary the input level from –20 to +20 dB. Record the frequency deviation obtained as a function of the input level at frequencies 0.1, 0.5, 1.0, 3.0 and 5.0 kHz. The maximum deviation was recorded at each test condition.

- **Audio frequency response**

The audio input level needed for a particular percentage of modulation was measured in accordance with ANSI/TIA 603-D: 2010. Adjust the audio input for 20% of rated system deviation at 1kHz using this level as a reference. Vary the Audio frequency from 100 Hz to 5 kHz and record the frequency deviation. Audio Frequency Response =20log10 (V_{FREQ}/V_{REF}).

- **Audio Low Pass Filter Response**

Apply a 1000 Hz tone from the audio signal generator and adjust the level per manufacturer's specifications. Record the dB level of the 1000 Hz tone as LEV_{REF}. Set the audio signal generator to the desired test frequency between 3000 Hz and the upper low pass filter limit. Record the dB level at the test frequency as LEV_{FREQ}. Calculate the audio frequency response at the test frequency as: low pass filter response = LEV_{FREQ} - LEV_{REF}

5.3 Occupied Bandwidth

5.3.1 Standard Applicable [FCC Part 95.633(a)(c), Part 2.1049 / RSS-210 A6.1.3, A6.2.3]

The Emission bandwidth, that is the frequency bandwidth such that, below its lower and above its upper frequency limits.

FCC Part 95.633(a) / RSS-210 A6.2.3:

GMRS: The authorized bandwidth for emission types H1D, J1D, R1D, H3E, J3E and R3E is 4 kHz; for emission types A1D and A3E, it is 8 kHz; and for emission types F1D, G1D, F3E, G3E and F2D, it is 20 kHz.

FCC Part 95.633(c) / RSS-210 A6.1.3:

FRS: The authorized bandwidth for an FRS unit is 12.5 kHz.

5.3.2 Test Environment conditions

- Ambient temperature : (25 - 26) ℃
- Relative Humidity : (65 - 67) % R.H.

5.3.3 Measurement Procedure

1. The EUT was modulated by 2.5 kHz Sine wave audio signal, The level of the audio signal employed is 16 dB greater than that necessary to produce 50 % of rated system deviation. Rated system deviation is 2.5 kHz (12.5 kHz channel spacing).
2. The transmitter output (antenna port) was connected to the spectrum analyzer in peak hold mode.
3. Measure the maximum width of the emission that is 26 dB down from the peak of the emission. The 99 % occupied bandwidth is the frequency bandwidth of the signal power at the 99 % channel power of occupied bandwidth.

The spectrum analyzer is set to the as follows :

- RBW : 300 Hz
- VBW : >3 x RBW
- Detector function : peak
- Trace : max hold

5.4 Emission Mask

5.4.1 Standard Applicable [FCC Part 95.635(b)(1)(3)(7) / RSS-210 A6.1.5, A6.2.5]

GMRS&FRS: Unwanted emissions shall be attenuated below the unmodulated carrier power in accordance with the following:

(1) At least 25 dB (decibels) on any frequency removed from the center of the authorized bandwidth by more than 50 % up to and including 100% of the authorized bandwidth.

(3) At least 35 dB on any frequency removed from the center of the authorized bandwidth by more than 100 % up to and including 250 % of the authorized bandwidth.

(7) At least 43 + 10 log10 (T) dB on any frequency removed from the center of the authorized bandwidth by more than 250 %.

5.4.2 Test Environment conditions

- Ambient temperature : (25 - 26) ℃
- Relative Humidity : (65 - 67) % R.H.

5.4.3 Measurement Procedure

The EUT was modulated by 2.5kHz Sine wave audio signal; the level of the audio signal employed is 16 dB greater than that necessary to produce 50% of rated system deviation. Rated system deviation is 2.5 kHz.

The spectrum analyzer is set to the as follows

- RBW = 300 Hz
- VBW: >3xRBW

5.4.4 Test setup

5.5 Transmitter Radiated Unwanted Emissions

5.5.1 Standard Applicable [FCC Part 95.635(b7) / RSS-201 A6.1.5, A6.2.5]

According to FCC section 95.635(b7), the unwanted emission should be attenuated below TP by at least 43+10 log (Transmit Power) dB.

5.5.2 Test Environment conditions

- Ambient temperature : (25 - 26) ℃
- Relative Humidity : (65 - 67) % R.H.

5.5.3 Measurement Procedure

Refer 5.1.3

5.5.4 Test Setup

Refer 5.1.4

5.5.5 Measurement Result

The following frequencies were selected based on the output power results.

Channel Description	CH	Freq. [MHz]	ERP power	
			[dBm]	[W]
GMRS	7	462.712 5	28.72	0.74

Emission Frequency [Mhz]	Ant Pol	Level below Carrier [dBc]	Margin [dB]	Limit [dBc]	Test Results
923.2	V	71.1	29.4	41.7	Compliance
1 387.2	V	74.3	32.6	41.7	Compliance
1 850.2	V	76.5	34.8	41.7	Compliance
Note: The formula for limit is below; 43+10 log (P) where, P = EUT's output power in W Therefore 43+10log(0.74) = 41.7					

Channel Description	CH	Freq. [MHz]	ERP power	
			[dBm]	[W]
FRS	12	467.662 5	26.50	0.45

Emission Frequency [Mhz]	Ant Pol	Level below Carrier [dBc]	Margin [dB]	Limit [dBc]	Test Results
933.2	V	74.9	35.4	39.5	Compliance
1 397.1	V	77.3	37.8	39.5	Compliance
Note: The formula for limit is below; 43+10 log (P) where, P = EUT's output power in W Therefore 43+10log(0.45) = 41.7

5.6 Frequency Stability

5.6.1 Standard Applicable [FCC Part 95.621(b), Part 95.627(b) / RSS-210 A6.1.6, A6.2.6]

The carrier frequency stability is the ability of the transmitter to maintain an assigned carrier frequency.
FCC Part 95.621(b) / RSS-210 A6.1.6, RSS-210 A6.2.6
GMRS: The carrier frequency tolerance shall be better than ±5 ppm.
FRS: The carrier frequency tolerance shall be better than ±2.5 ppm.

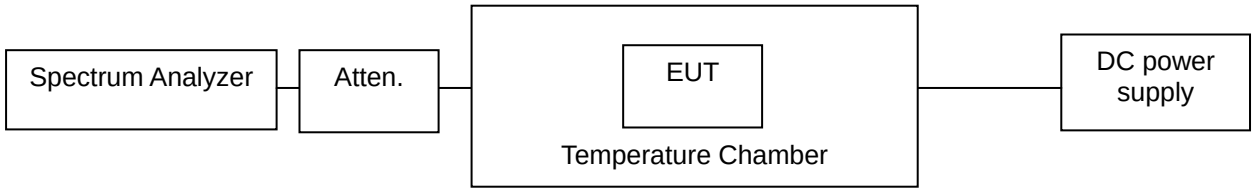
5.6.2 Test Environment conditions

- Ambient temperature : (25 - 26) ℃
- Relative Humidity : (65 - 67) % R.H.

5.6.3 Measurement Procedure

EUT connect to Spectrum analyzer, test is performed in T&H chamber.
These measurements shall also be performed at normal and extreme test conditions.
▪ Test Method : ANSI/TIA-603-D-2010, clause 3.2.2 for frequency stability tests
-Frequency stability with respect to ambient temperature
-Frequency stability when varying supply voltage

5.6.4 Test setup



5.6.5 Measurement Result
