RE: FCC ID: MOIPULS67

The Millimeter wave procedure was used as a guide during testing in which hand held measurements were made in and around the EUT as described in the procedure to determine worst-case emission. There were no discernable emission from the EUT even when hand held measurements were made. Furthermore, the aforementioned procedure was also consulted in determining the calculations in the application.

Sincerely,

A handwritten signature in blue ink that reads "Desmond A. Fraser".
