(4) EUT Photo

The photograph shows a custom green PCB populated with an Arduino Uno microcontroller. The microcontroller is centrally located, surrounded by numerous surface-mount components including resistors (labeled R1 through R32) and capacitors (labeled C1 through C10). A USB Type-C connector is visible on the left side of the board. The PCB is populated with various passive components, including resistors and capacitors, and features a USB Type-C connector on the left side. The board is populated with various passive components, including resistors and capacitors, and features a USB Type-C connector on the left side.
