Subject: RE: Telular FCC application

David and Andy, I have spent considerable time in reviewing the newest test report submitted, but do not see how the measurements have changed from the previous report. It appears as though you may have submitted a report that has not been updated. I could not find measurement plots in the report that used the stated 1MHz RBW and 1MHz VBW as stated in the text from you on September 28th. All plots seem to show RBW of 10kHz and VBW of 1kHz, thus making the measurements video filtered (or video averaged), not peak measurements.

Please let me know if I am in error. I am attaching both copies of the report for your reference.

Best regards,

Chris Harvey

Chris,

Please find the attached report in connection to the application for FCC certification for the Telular SX4e product.

Any queries or questions please do not hesitate in contacting myself or Andy Crisp.

best regards

David Trevayne-Smith
