2. Photograph for the worst case configuration

3. Sample Calculation

The emission level measured in decibels above one microvolt $(dB\mu V)$ was converted into microvolt per meter $(\mu V/m)$ as shown in following sample calculation.

For example:

	Measured Value at	393,68MHz	4.5	$dB\mu$
*	Antenna Factor		20.4	dB
*	Cable Loss		3.7	dB
	Preamplifier		0.0	dB
	Distance Correction Factor *		0.0	dB

= Radiated Emission 28.6 dB μ N/m (= 26.9 μ N/m)

 Extrapolated from the measured distance(1.5m) to the specified distance(3m) by an inverse linear distance extrapolation.
