Welcome to the installation guide !

As you may notice, this is no longer on paper but online now. Same guide, just smarter.

Duration : 10 min

Go!

Choose the right spot for your device

This device acts as a motion sensor. The right spot is :

✅ On a wall, on a door or on a window

✅ Between 1,80m and 2m from the ground

I found the perfect place!

Choose your setup option

Select mounted on a door or window if you want your sensor to act as a contact sensor

Mounted on a door or window

Occupancy and contact sensor

Mounted on a wall

Occupancy sensor only

Choose your setup option

Select mounted on a door or window if you want your sensor to act as a contact sensor

Standard wall mounting

45° angle wedge

Stick or screw your standard wall mount on the door panel

Be sure to install your wall mount on the door panel (mobile part of the door) and not the door frame.

Next

Stick your Sensor magnet on the door frame

Make sure the magnet is maximum 4cm away from the wall mount.

Next

Remove the protective tab from the battery

The LED should turn on green for a few seconds.

Next

Clip your sensor on your wall mount

After a few seconds the LED will glow white.

Next

Installation

Configure your Sensor in your app

Open the app in which you want to configure your Sensor. You will have to scan the Matter QR code from the manual

Open Home + Security app

Open Apple Home app

Open Google Home app

Open Amazon Alexa app

Open SmartThings app

Finish
