ENGINEERING TEST REPORT

ON:

PARADOX SECURITY SYSTEMS
"GPS 880 CARD READER"

FCC ID: N4CPOSIPROX

IN ACCORDANCE WITH: FCC PART 15, SUBPART C, PARAGRAPH 15.209 GENERAL LIMITS FOR LOW POWER TRANSMITTERS

PROJECT NO.: 8R00488.2

TESTED FOR:

PARADOX SECURITY SYSTEMS 780 INDUSTRIAL BLVD. STE EUSTACHE, QUEBEC J7R 5V3

TESTED BY:

KTL OTTAWA INC. 3325 RIVER ROAD, R.R. 5 OTTAWA, ONTARIO K1V 1H2

NVLAP LAB CODE: 100351-0

JULY 1998

This document contains 18 pages including this one.

KTL Ottawa Inc. authorizes the above named company to reproduce this report provided it is reproduced in its entirety and for use by the company's employees only.

Any use which a third party makes of this report, or any reliance on or decisions to be made based on it, are the responsibility of such third parties. KTL Ottawa Inc. accepts no responsibility for damages, if any, suffered by any third party as a result of decisions made or actions based on this report.

This report applies only to the items tested.

Master: ktlPT15209 Date: August 5, 1998

Theory of Operation

The E.U.T. generates a pulsed carrier at 125 kHz continuously. When the ID card is placed within this field, the card is powered by the 125 kHz field and "wakes up" to transmit its unique ID number. If the ID number is valid it is decoded by the reader and sent to the host controller via data cables. The host controller provides 12.5 Vdc power to the reader.

Section 3. Powerline Conducted Emissions

NAME OF TEST: Powerline Conducted Emissions PARA. NO.: 15.207

TESTED BY: DATE:

Test Conditions: Standard Temperature and Humidity

Standard Test Voltage

Minimum Standard:

Frequency	Maximum Powerlin	♦ Aducted RF Voltage		
(MHz)	(μV)	(dBµV)		
0.45 - 30.0	250	48		

Test Results: Complies / Does not concly. See attached graph(s).

Measurement Data: See attached eta. (s).

Method of Measurement: (Proced SI C63.4-1992)

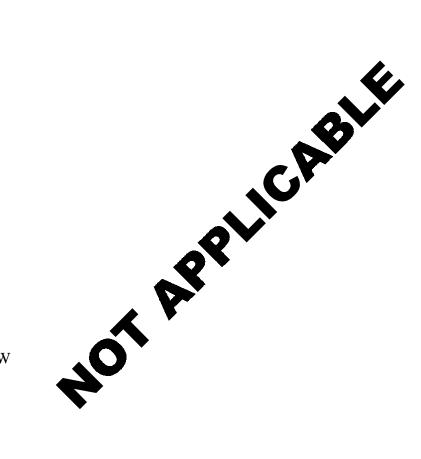

Measurements were made using a spectrum analyzer with 10 kHz RBW, Peak Detector. Any emissions that are close to the limit are measured using a test receiver with 10 kHz bandwidth, CISPR Quasi-Peak Detector.

Section 4. Radiated Emissions

NAME OF TEST: Radiated Emissions PARA. NO.: 15.209

TESTED BY: Tom Tidwell DATE: July 31, 1998

Minimum Standard: The field strength of emissions from the device shall not exceed the following limits.

Fundamental	Field Strength	Field Strength		
(MHz)	(mV/m)	(dBµV)		
0.009 - 0.490	2400/F(kHz) @ 300m	_		
0.490 - 1.705	24000/F(kHz) @ 30m	_		
1.705 - 30	30 @ 30m	_		
30 - 88	100	40.0		
88 - 216	150	43.5		
216 - 960	200	46.0		
Above 960	500	54.0		

Test Results: Complies. The worst-case emission level is $51.5 \text{ dB}\mu\text{V/m}$ @ 3m at 0.1258 MHz. This is 33.1 dB below the specification limit.

Measurement Data: (Procedure ANSI C63.4-1992)

Maximizing Emission Levels:

For hand held equipment or equipment that may be mounted in a variety of positions, the E.U.T. was tested on three orthogonal axis to determine orientation of worst-case emission levels. Below 30 MHz an active loop antenna is used at a fixed height of 1 meter. The loop is rotated about it's vertical axis to obtain worst-case results.

Spectrum Searched:

The spectrum was searched from the lowest frequency generated in the E.U.T. up to 1000 MHz, or the 10th harmonic of the fundamental emission.

Near-Field Measurement:

Emissions below 30 MHz are measured in the near-field and an extrapolation factor of 40 dB per decade is used to determine the 10m limit.

Example: Measurement Distance = 10m

Specification Distance = 300m

10m Limit: Specified limit (at 300m) - (40 Log $\frac{10}{300}$)

Thus for measurement at 10m the specified limit is increased by 59 dB.

EQUIPMENT: GPS 880 Card Reader

FCC ID: N4CPOSIPROX

Test Data - Radiated Emissions

			Test Distance (meters): 10		Range: A Tower		ceiver: SH-3		RBW(kHz): 10 kHz		Detector: Peak

Section 5. Occupied Bandwidth

NAME OF TEST: Occupied Bandwidth PARA. NO.: N/A

TESTED BY: Tom Tidwell DATE: July 31, 1998

Minimum Standard: Not specified.

Test Results: The 99% power occupied bandwidth is 377 Hz.

Measurement Data: See attached graph(s).

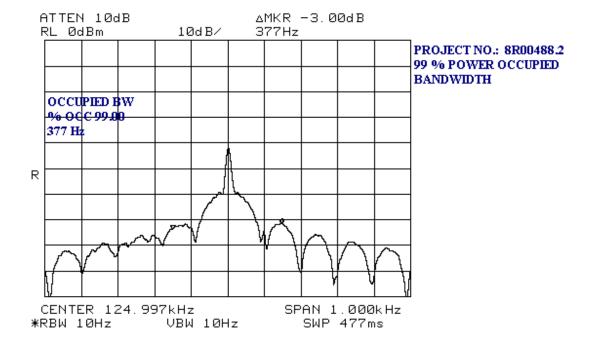

Method of Measurement:

A spectrum analyzer was used to measure the 99% power occupied bandwidth of the fundamental emission. This value is used as the bandwidth for the emission designator.
