Dear Nick,

Recently I have sent to you a SAT, PAT and RAT for photographing for the inclusion of the photographs in our FCC application.

As you have noticed the labels on these devices do not match the requirements of the FCC. The reason for this is because we have not yet produced tags for sale in the US and hence labels.

Therefore, inserted into this document are the electronic versions of the labels for the FCC variants of our TAG transmitters. Please note that the images appended are black and white when in fact the colours will be identical to those shown on the actual tags. All extra text though will be in black.

Yours sincerely

Stephen Grant
