Prepared by:

**TUV Rheinland of North America, Inc.**

The test results contained in this report refer exclusively to the product(s) presented for testing. No liability may be assumed for models or products not referred to herein. This test report may not be published or duplicated in part without permission of the testing body. This test report by itself does not constitute authorization for the use of any TUV Rheinland test mark. The report must not be used by the client to claim product certification, approval, or endorsement by A2LA or any agency of the Federal Government.

## Manufacturer's statement - attestation

The manufacturer; OMNI-ID, as the responsible party for the equipment tested, hereby affirms:

- a) That they have reviewed and concurs that the test shown in this report are reflective of the operational characteristics of the device for which certification is sought;
- b) That the device in this test report will be representative of production units;
- c) That all changes (in hardware and software/firmware) to the subject device will be reviewed.
- d) That any changes impacting the attributes, functionality or operational characteristics documented in this report will be communicated to the body responsible for approving (certifying) the subject equipment.

The test results contained in this report refer exclusively to the product(s) presented for testing. No liability may be assumed for models or products not referred to herein. This test report may not be published or duplicated in part without permission of the testing body. This test report by itself does not constitute authorization for the use of any TUV Rheinland test mark. The report must not be used by the client to claim product certification, approval, or endorsement by A2LA or any agency of the Federal Government.

## **1 General Information**

### **1.1 Scope**

This report is intended to document the status of conformance with the requirements of the FCC Part 15C, RSS-210 Issue 8 and ANSI C63.10 based on the results of testing performed on 3/23/2015 on the Active RFID Tag, Model Number. CP8563, manufactured by OMNI-ID. This report only applies to the specific samples tested under the stated test conditions. It is the responsibility of the manufacturer to assure that additional production units of this model are manufactured with identical or EMI equivalent electrical and mechanical components. This report is further intended to document changes and modifications to the EUT throughout its life cycle. All documentation will be included as a supplement.

### **1.2 Purpose**

Testing was performed to evaluate the performance of the EUT (Equipment Under Test) in accordance with the applicable requirements, procedures, and criteria defined in the application of regulations and application of standards listed in this report.

The test results contained in this report refer exclusively to the product(s) presented for testing. No liability may be assumed for models or products not referred to herein. This test report may not be published or duplicated in part without permission of the testing body. This test report by itself does not constitute authorization for the use of any TÜV Rheinland test mark. The report must not be used by the client to claim product certification, approval, or endorsement by A2LA or any agency of the Federal Government.

### 1.3 Summary of Test Results

The test results contained in this report refer exclusively to the product(s) presented for testing. No liability may be assumed for models or products not referred to herein. This test report may not be published or duplicated in part without permission of the testing body. This test report by itself does not constitute authorization for the use of any TUV Rheinland test mark. The report must not be used by the client to claim product certification, approval, or endorsement by A2LA or any agency of the Federal Government.

## 2 Laboratory Information

### 2.1 Accreditations & Endorsements

#### 2.1.1 US Federal Communications Commission

TUV Rheinland of North America located at, 710 Resende Road, Webster, NY 14580 is accredited by the commission for performing testing services for the general public on a fee basis. This laboratory test facilities have been fully described in reports submitted to and accepted by the FCC (Registration No 90575). The laboratory scope of accreditation includes: Title 47 CFR Part 15, and 18. The accreditation is updated every 3 years.

#### 2.1.2 A2LA

This is a program which is administered under the auspices of the National Institute of Standards and Technology. The laboratory has been assessed and accredited in accordance with ISO Standard 17025:2005 (Lab code: 3331.08). The scope of laboratory accreditation includes emission and immunity testing. The accreditation is updated annually.

#### 2.1.3 VCCI

VCCI Accredited test lab. Registration numbers A-0203

#### 2.1.4 Industry Canada

(Registration No.: 482B-1) The 10m Semi-Anechoic Chamber has been accepted by Industry Canada to perform testing to 3 and to 10m, based on the test procedures described in ANSI C63.4-2013.

#### 2.1.5 BSMI

Registration No.: SL2-IN-E-050R. The BSMI accreditation was obtained by NIST MRA with the BSMI.

#### 2.1.6 Korea

Recognized by Radio Research Agency as an accredited Conformity Assessment Body (CAB) under the terms of Phase I of the APEC TEL.

The test results contained in this report refer exclusively to the product(s) presented for testing. No liability may be assumed for models or products not referred to herein. This test report may not be published or duplicated in part without permission of the testing body. This test report by itself does not constitute authorization for the use of any TUV Rheinland test mark. The report must not be used by the client to claim product certification, approval, or endorsement by A2LA or any agency of the Federal Government.

### 2.1.7 Sample Calculation – radiated & conducted emissions

The field strength is calculated by subtracting the Amplifier Gain and adding the Cable Loss and Antenna Correction Factor to the measured reading. The basic equation is as follows:

$$\text{Field Strength (dB}\mu\text{V/m)} = \text{RAW} - \text{AMP} + \text{CBL} + \text{ACF}$$

Where: RAW = Measured level before correction (dB $\mu$ V)

AMP = Amplifier Gain (dB)

CBL = Cable Loss (dB)

ACF = Antenna Correction Factor (dB/m)

$$\mu\text{V/m} = 10^{\frac{\text{dB}\mu\text{V/m}}{20}}$$

#### Sample radiated emissions calculation @ 30 MHz

**Measurement +Antenna Factor–Amplifier Gain+Cable loss=Radiated Emissions (dBuV/m)**

$$25 \text{ dBuV/m} + 17.5 \text{ dB} - 20 \text{ dB} + 1.0 \text{ dB} = 23.5 \text{ dBuV/m}$$

### 2.2 Measurement Uncertainty Emissions

	U <sub>lab</sub>	U <sub>cispr</sub>
<b>Radiated Disturbance @ 10m</b>		
30 MHz – 1,000 MHz	4.57 dB	5.2 dB
<b>Conducted Disturbance @ Mains Terminals</b>		
150 kHz – 30 MHz	2.62 dB	3.6 dB
<b>Disturbance Power</b>		
30 MHz – 300 MHz	3.88 dB	4.5 dB

### 2.3 Calibration Traceability

All measurement instrumentation is traceable to the National Institute of Standards and Technology (NIST). Measurement method complies with ANSI/NCSL Z540-1-1994 and ISO Standard 17025:2005. Equipment calibration records are kept on file at the test facility.

The test results contained in this report refer exclusively to the product(s) presented for testing. No liability may be assumed for models or products not referred to herein. This test report may not be published or duplicated in part without permission of the testing body. This test report by itself does not constitute authorization for the use of any TÜV Rheinland test mark. The report must not be used by the client to claim product certification, approval, or endorsement by A2LA or any agency of the Federal Government.

## 2.4 Measurement Equipment Used

Pressure/Temperature/RH	Extech	SD700	C480	Q668876	12-Aug-14	12-Aug-15	

The test results contained in this report refer exclusively to the product(s) presented for testing. No liability may be assumed for models or products not referred to herein. This test report may not be published or duplicated in part without permission of the testing body. This test report by itself does not constitute authorization for the use of any TÜV Rheinland test mark. The report must not be used by the client to claim product certification, approval, or endorsement by A2LA or any agency of the Federal Government.

### 3 Product Information

#### 3.1 Equipment Modifications

No modifications were needed to bring product into compliance.

#### 3.2 Test Plan

The EUT product information, test configuration, mode of operation, test types, test procedures, test levels, pass/failure criteria, in this report were carried out per the product test plan located in appendix A of this report.

Duty Cycle

Ton = 10mS

Toff = 15 Seconds

So Duty Cycle =  $100 * (10\text{mS}) / (10\text{mS} + 15 \text{ Seconds}) = .067\%$

Antenna Information:

Center Freq.: 433MHz Recom.

Freq. Range: 429–437MHz

Wavelength:  $\frac{1}{4}$ -wave

VSWR:  $\leq 1.9$  typ. at center

Peak Gain: –6.4dBi Impedance:

50-ohms

Oper. Temp. Range: –40°C to +130°C

Connection: Surface-mount

The test results contained in this report refer exclusively to the product(s) presented for testing. No liability may be assumed for models or products not referred to herein. This test report may not be published or duplicated in part without permission of the testing body. This test report by itself does not constitute authorization for the use of any TÜV Rheinland test mark. The report must not be used by the client to claim product certification, approval, or endorsement by A2LA or any agency of the Federal Government.

Figure 1 – External Photo of EUT (front)

Figure 2 – External Photo of EUT (back)

The test results contained in this report refer exclusively to the product(s) presented for testing. No liability may be assumed for models or products not referred to herein. This test report may not be published or duplicated in part without permission of the testing body. This test report by itself does not constitute authorization for the use of any TUV Rheinland test mark. The report must not be used by the client to claim product certification, approval, or endorsement by A2LA or any agency of the Federal Government.

## 4 Emissions

### 4.1 Radiated Emissions

This test measures the electromagnetic levels of spurious signals generated by the EUT that radiated from the EUT and may affect the performance of other nearby electronic equipment.

#### 4.1.1 Over View of Test

Results	Complies (as tested per this report)					Date	3/23/2015		
Standard	FCC Part 15.209 and RSS - 210 Issue 8								
Product Model	CP8563				Serial#	TS-1			
Configuration	Tested in 10m Semi-Anechoic Chamber								
Test Set-up	Tested in 10m Semi-Anechoic Chamber, placed on turn-table at 3 meters, see test plans for details								
EUT Powered By	3 VDC	Temp	24°C	Humidity	52%	Pressure	1013mbar		
Frequency Range	30 - 1000 MHz @ 3m Spurious emissions to 2500 Mhz								
Perf. Criteria	Class B. (Below Limit)			Perf. Verification		Readings Under Limit			
Mod. to EUT	None			Test Performed By		Randall Masline			

#### 4.1.2 Test Procedure

Radiated FCC emissions tests were performed using the procedures of ANSI C63.10:2013 including methods for signal maximizations and EUT configuration. The photos included with the report show the EUT in its maximized configuration. Further radiated emission tests were performed per the procedures stated in the other emissions standards listed in this report.

The frequency range from 30 - 1000 MHz was investigated for radiated emissions.

Radiated emission testing was first performed at a distance of 3 meters in the semi-anechoic chamber in order to identify the specific frequencies for which these measurements will be made on the 10 m OATS, at a distance of 3 meters.

#### 4.1.3 Deviations

There were no deviations from the test methodology listed in the test plan for the radiated emission test.

The test results contained in this report refer exclusively to the product(s) presented for testing. No liability may be assumed for models or products not referred to herein. This test report may not be published or duplicated in part without permission of the testing body. This test report by itself does not constitute authorization for the use of any TÜV Rheinland test mark. The report must not be used by the client to claim product certification, approval, or endorsement by A2LA or any agency of the Federal Government.

## 4.2 Fundamental Field Strength and Harmonic Emissions

This test evaluates the field strength of the fundamental and field strength of the spurious emissions.

### 4.2.1 Test Over View

Results	Complies (as tested per this report)					Date	3/12/2015	
Standard	FCC Part 15.231 and RSS - 210 Issue 8							
Product Model	CP8563				Serial#	TS-1		
Configuration	Tested in 10m Semi-Anechoic Chamber							
Test Set-up	EUT placed on table      Tested in 10m Semi-Anechoic Chamber							
EUT Powered By	3 VDC	Temp	21° C	Humidity	48%	Pressure	1021mbar	
Perf. Criteria	15.231 (Below Limit)			Perf. Verification		Readings under Limit		
Mod to EUT	None			Test Performed By		Randall Masline		

### 4.2.2 Test Procedure

The EUT was placed on a table 3 meters from the antenna and all 3 orthogonal positions were investigated for highest field strength and highest spurious emissions. The fundamental frequency of the EUT is 433 MHz, therefore in addition to the requirements of 15.205 the EUT was tested to meet the following requirements in 15.231(b)

Fundamental frequency (MHz)	Field strength of fundamental (microvolts/meter)	Field strength of spurious emissions (microvolts/meter)
40.66-40.70.....	2,250.....	225
70-130.....	1,250.....	125
130-174.....	\1\ 1,250 to 3,750	\1\ 125 to 375
174-260.....	3,750.....	375
260-470.....	\1\ 3,750 to 12,500.	\1\ 375 to 1,250
Above 470.....	12,500.....	1,250

### 4.2.3 Deviations

There were no deviations from the test methodology listed in the test plan for the harmonic current emissions test.

The test results contained in this report refer exclusively to the product(s) presented for testing. No liability may be assumed for models or products not referred to herein. This test report may not be published or duplicated in part without permission of the testing body. This test report by itself does not constitute authorization for the use of any TÜV Rheinland test mark. The report must not be used by the client to claim product certification, approval, or endorsement by A2LA or any agency of the Federal Government.

#### 4.2.4 Final Test

All final measurements were below (in compliance) the limits.

#### 4.2.5 Final Data

Figure 5 – Peak Field Strength Horizontal Polarity is 81.57 dBuV

Ton = 10mS

Toff = 15 Seconds

Duty Cycle =  $100 * (10\text{mS}) / (10\text{mS} + 15 \text{ Seconds}) = .067\%$  Limit is then raised by 20db to 100.82 dBuV/m

Per FCC Section 15.35 for a peak emission

### 4.3 Bandwidth

This test measures the Bandwidth of the fundamental emission.

#### 4.3.1 Test Over View

Results	Complies (as tested per this report)					Date	3/23/2015	
Standard	FCC Part 15.231 and RSS - 210 Issue 8							
Product Model	CP8563				Serial#	TS-1		
Configuration	Tested in 10m Semi-Anechoic Chamber							
Test Set-up	EUT placed on table							
EUT Powered By	3 VDC	Temp	21° C	Humidity	48%	Pressure	1021mbar	
Perf. Criteria	Part 15.231 (Below Limit)			Perf. Verification		Readings under Limit		
Mod to EUT	None			Test Performed By		Randall Masline		

#### 4.3.2 Test Procedure

Bandwidth measurements were made according to FCC part 15.31 and FCC part 15.231(c). For Industry Canada the bandwidth measurements were made in accordance with RSS – 210 Issue 8

The bandwidth of the emission shall be no wider than 0.25% of the center frequency for devices operating above 70 MHz and below 900 MHz. For devices operating above 900 MHz, the emission shall be no wider than 0.5% of the center frequency. Bandwidth is determined at the points 20 dB down from the modulated carrier.

The Fundamental Frequency is 433 MHz therefore 0.25% of 433 MHz is 1082.5 Mhz

#### 4.3.3 Deviations

There were no deviations from the test methodology.

#### 4.3.4 Final Test

All final measurements were within (in compliance) the limits.

The test results contained in this report refer exclusively to the product(s) presented for testing. No liability may be assumed for models or products not referred to herein. This test report may not be published or duplicated in part without permission of the testing body. This test report by itself does not constitute authorization for the use of any TUV Rheinland test mark. The report must not be used by the client to claim product certification, approval, or endorsement by A2LA or any agency of the Federal Government.

Date: 24.FEB.2015 01:22:02

#### 4.4 Deactivation of Transmitter

A manually operated transmitter shall employ a switch that will automatically deactivate the transmitter within not more than 5 seconds of being released.

##### 4.4.1 Over View of Test

Results	Complies (as tested per this report)					Date	5/19/2015	
Standard	FCC Part 15.231(a)							
Product Model	CP8563				Serial#	TS-1		
Configuration	See test plan for details							
Test Set-up	EUT placed on table see test plans for details							
EUT Powered By	3.0 VDC Battery	Temp	22° C	Humidity	37%	Pressure	1004mbar	
Frequency Range	433.27 MHz							
Perf. Criteria	5 Seconds (Below Limit )		Perf. Verification					
Mod. to EUT	None		Test Performed By		Randall Masline			

##### 4.4.2 Test Procedure

Testing was performed by sweeping the fundamental frequency for 30 seconds and manually operating the transmitter. The EUT does employ a manual switch – in normal operation of the device the active tag transmits once every 6 hours for a duration of 1.7ms for each transmission.

##### 4.4.3 Deviations

There were no deviations from the test methodology listed in the test plan for the conducted emission test.

##### 4.4.4 Final Test

All final measurements were below (in compliance) the limits.

NOTE: In normal operation of the device the active tag transmits once every 6 hours for a duration of 1.7ms for each transmission.

## Appendix A

### 6 Test Plan

This test report is intended to follow this test plan outlined here in unless other wise stated in this here report. The following test plan will give details on product information, standards to be used, test set ups and refer to TUV test procedures. The test procedures will give the steps to be taken when performing the stated test. The product information below came via client, product manual, product itself and or the internet.

#### 6.1 General Information

<b>Client</b>	OMNI-ID
<b>Address 1</b>	21200 Ridgeway Avenue
<b>Address 2</b>	Rochester, NY 14615
<b>Contact Person</b>	Len Desmond
<b>Telephone</b>	585-713-1021
<b>Fax</b>	
<b>e-mail</b>	len.desmond@omni-id.com

#### 6.2 Model(s) Name

CP8563

#### 6.3 Type of Product

Active RFID Tag

The test results contained in this report refer exclusively to the product(s) presented for testing. No liability may be assumed for models or products not referred to herein. This test report may not be published or duplicated in part without permission of the testing body. This test report by itself does not constitute authorization for the use of any TUV Rheinland test mark. The report must not be used by the client to claim product certification, approval, or endorsement by A2LA or any agency of the Federal Government.

#### 6.4 Equipment Under Test (EUT) Description

The 8564 is an active RFID tag that operates at 433 MHz

#### 6.5 Modifications

No modifications were necessary to meet the requirements.

#### 6.6 Product Environment

<input checked="" type="checkbox"/>	Residential	<input type="checkbox"/>	Hospital
