Pursuant to 15.255 this devices needs to meet the following requirements:

(e) Except as specified paragraph (e)(1) of this section, the peak transmitter conducted output power shall not exceed 500 mW. Depending on the gain of the antenna, it may be necessary to operate the intentional radiator using a lower peak transmitter output power in order to comply with the EIRP limits specified in paragraph (b) of this section.

8/25/15 - CT - The conducted output power at -10.6 dBm is below the 500 mw limit.

(b) Except as indicated in paragraph (b)(1)(ii) of this section, the average power of any emission shall not exceed 40 dBm and the peak power of any emission shall not exceed 43 dBm

8/25/15 - CT - The EIRP at 9.4 dBm is well below the radiated limit of 40 dBm.
