

## RF Exposure Evaluation declaration

Product Name : IEEE 802.11b/g Bluetooth 2.0+  
EDR and GPS MiniCard  
Model No. : M230-M  
FCC ID. : N89-MM230M

Applicant : CyberTAN Technology, Inc.

Address : 99 Park Avenue 3, Science Park Hsinchu 308,  
Taiwan, R.O.C.

Date of Receipt : 2008/01/06  
Date of Declaration : 2008/01/08  
Report No. : 081090R-RFUSP06V01-Exp

The declaration results relate only to the samples calculated.

The declaration shall not be reproduced except in full without the written approval of QuieTek Corporation.

## 1. RF Exposure Evaluation

### 1.1. Limits

According to FCC 1.1310: The criteria listed in the following table shall be used to evaluate the environment impact of human exposure to radio frequency (RF) radiation as specified in 1.1307(b)

#### LIMITS FOR MAXIMUM PERMISSIBLE EXPOSURE (MPE)

| Frequency Range (MHz)                                     | Electric Field Strength (V/m) | Magnetic Field Strength (A/m) | Power Density (mW/cm <sup>2</sup> ) | Average Time (Minutes) |
|---|-------------------------------|-------------------------------|-------------------------------------|------------------------|
| (A) Limits for Occupational/ Control Exposures            |                               |                               |                                     |                        |
| 300-1500  | --                            | --                            | F/300                               | 6                      |
| 1500-100,000  | --                            | --                            | 5                                   | 6                      |
| (B) Limits for General Population/ Uncontrolled Exposures |                               |                               |                                     |                        |
| 300-1500  | --                            | --                            | F/1500                              | 6                      |
| 1500-100,000  | --                            | --                            | 1                                   | 30                     |

F= Frequency in MHz

Friis Formula

Friis transmission formula:  $P_d = (P_{out} \cdot G) / (4 \cdot \pi \cdot r^2)$

Where

$P_d$  = power density in mW/cm<sup>2</sup>

$P_{out}$  = output power to antenna in mW

$G$  = gain of antenna in linear scale

$\pi$  = 3.1416

$R$  = distance between observation point and center of the radiator in cm

$P_d$  is the limit of MPE, 1 mW/cm<sup>2</sup>. If we know the maximum gain of the antenna and the total power input to the antenna, through the calculation, we will know the distance  $r$  where the MPE limit is reached.

### 1.2. Test Procedure

Software provided by client enabled the EUT to transmit and receive data at lowest, middle and highest channel individually.

The temperature and related humidity: 18°C and 78% RH.

### 1.3. Test Result of RF Exposure Evaluation

|                |  |
|----------------|--|
| Product        | IEEE 802.11b/g Bluetooth 2.0+ EDR and GPS MiniCard |
| Test Mode      | Mode 1: Transmit                                   |
| Test Condition | RF Exposure Evaluation                             |

#### Antenna Gain

Antenna Gain: The maximum Gain measured in fully anechoic chamber is 2.51dBi or 1.782 in linear scale.

#### Output Power into Antenna & RF Exposure Evaluation Distance:

| 1M-GFSK Modulation, PRBS Packet Type |                         |                              |  |
|--------------------------------------|-------------------------|------------------------------|--|
| Bluetooth Function                   |                         |                              |  |
| Channel                              | Channel Frequency (MHz) | Output Power to Antenna (mW) | Power Density at R = 20 cm (mW/cm <sup>2</sup> ) |
| 1                                    | 2402.00                 | 2.4889                       | 0.00088  |
| 6                                    | 2441.00                 | 2.1478                       | 0.00076  |
| 11                                   | 2480.00                 | 2.1232                       | 0.00075  |

The power density Pd (4th column) at a distance of 20 cm calculated from the Friis transmission formula is far below the limit of 1 mW/cm<sup>2</sup>.

|                |  |
|----------------|--|
| Product        | IEEE 802.11b/g Bluetooth 2.0+ EDR and GPS MiniCard |
| Test Mode      | Mode 1: Transmit                                   |
| Test Condition | RF Exposure Evaluation                             |

### Antenna Gain

Antenna Gain: The maximum Gain measured in fully anechoic chamber is 2.51dBi or 1.782 in linear scale.

### Output Power into Antenna & RF Exposure Evaluation Distance:

| 2M-pi/4 Modulation, PRBS Packet Type |                         |                              |  |
|--------------------------------------|-------------------------|------------------------------|--|
| Bluetooth Function                   |                         |                              |  |
| Channel                              | Channel Frequency (MHz) | Output Power to Antenna (mW) | Power Density at R = 20 cm (mW/cm <sup>2</sup> ) |
| 1                                    | 2402.00                 | 1.4723                       | 0.00052  |
| 6                                    | 2441.00                 | 1.4355                       | 0.00051  |
| 11                                   | 2480.00                 | 1.2618                       | 0.00045  |

The power density Pd (4th column) at a distance of 20 cm calculated from the Friis transmission formula is far below the limit of 1 mW/cm<sup>2</sup>.

|                |  |
|----------------|--|
| Product        | IEEE 802.11b/g Bluetooth 2.0+ EDR and GPS MiniCard |
| Test Mode      | Mode 1: Transmit                                   |
| Test Condition | RF Exposure Evaluation                             |

### Antenna Gain

Antenna Gain: The maximum Gain measured in fully anechoic chamber is 2.51dBi or 1.782 in linear scale.

### Output Power into Antenna & RF Exposure Evaluation Distance:

| 3M-8DPSK Modulation, PRBS Packet Type |                         |                              |  |
|---------------------------------------|-------------------------|------------------------------|--|
| Bluetooth Function                    |                         |                              |  |
| Channel                               | Channel Frequency (MHz) | Output Power to Antenna (mW) | Power Density at R = 20 cm (mW/cm <sup>2</sup> ) |
| 1                                     | 2402.00                 | 1.4125                       | 0.00050  |
| 6                                     | 2441.00                 | 1.4421                       | 0.00051  |
| 11                                    | 2480.00                 | 1.2647                       | 0.00045  |

The power density Pd (4th column) at a distance of 20 cm calculated from the Friis transmission formula is far below the limit of 1 mW/cm<sup>2</sup>.
