

# FCC DFS Test Report

FCC ID : N8J-WFMD001  
Equipment : Wireless module  
Brand Name : JEM  
Model Name : WM-AC201  
Applicant : JOINSOON ELECTRONICS MFG., CO., LTD.  
19F, NO. 79, Sec 1, Sintai 5th Rd., Sijhih Dist.,  
New Taipei City 221, Taiwan(R.O.C)  
Manufacturer : JOINSOON ELECTRONICS MFG., CO., LTD.  
19F, NO. 79, Sec 1, Sintai 5th Rd., Sijhih Dist.,  
New Taipei City 221, Taiwan(R.O.C)  
Standard : 47 CFR FCC Part 15.407

The product was received on Oct. 02, 2019, and testing was started from Mar. 13, 2020 and completed on Mar. 13, 2020. We, SPORTON INTERNATIONAL INC. EMC & Wireless Communications Laboratory, would like to declare that the tested sample has been evaluated in accordance with the procedures given in KDB 905462 D02 UNII DFS Compliance Procedures New Rules v02 and shown compliance with the applicable technical standards.

The report must not be used by the client to claim product certification, approval, or endorsement by TAF or any agency of United States government.

The test results in this report apply exclusively to the tested model / sample. Without written approval of SPORTON INTERNATIONAL INC. EMC & Wireless Communications Laboratory, the test report shall not be reproduced except in full.

Approved by: Allen Lin

## Summary of Test Result

| Report Clause | Ref. Std. Clause   | Test Items                                                               | Result (PASS/FAIL) | Remark                                  |
|---------------|--------------------|--------------------------------------------------------------------------|--------------------|-----------------------------------------|
| 3.3           | KDB 905462 7.8.1   | DFS: UNII Detection Bandwidth Measurement                                | PASS               | 100% of the 99% BW                      |
| 3.4           | KDB 905462 7.8.2.1 | DFS: Initial Channel Availability Check Time                             | PASS               | CAC $\geq$ 60 sec                       |
| 3.4           | KDB 905462 7.8.2.2 | DFS: Radar Burst at the Beginning of the Channel Availability Check Time | PASS               | Detection Threshold: -63 dBm            |
| 3.4           | KDB 905462 7.8.2.3 | DFS: Radar Burst at the End of the Channel Availability Check Time       | PASS               | Detection Threshold: -63 dBm            |
| 3.5           | KDB 905462 7.8.3   | DFS: In-Service Monitoring for Channel Move Time (CMT)                   | PASS               | CMT $\leq$ 10sec                        |
| 3.5           | KDB 905462 7.8.3   | DFS: In-Service Monitoring for Channel Closing Transmission Time (CCTT)  | PASS               | CCTT $\leq$ 60 ms starting at CMT 200ms |
| 3.5           | KDB 905462 7.8.3   | DFS: In-Service Monitoring for Non-Occupancy Period (NOP)                | PASS               | NOP $\geq$ 30 min                       |
| 3.6           | KDB 905462 7.8.4   | DFS: Statistical Performance Check                                       | PASS               | Table 5 - 7 (KDB 905462)                |
| 3.1.4         | KDB 905462 8.1     | User Access Restrictions                                                 | PASS               | DFS controls                            |

### Declaration of Conformity:

The test results with all measurement uncertainty excluded are presented in accordance with the regulation limits or requirements declared by manufacturers.

### Comments and explanations:

None

| Note 1: IEEE Std. 802.11n modulation consists of HT20 and HT40 (HT: High Throughput). Then EUT support HT20 and HT40.<br>Note 2: HT20 and HT40 use a combination of OFDM-BPSK, QPSK, 16QAM, 64QAM modulation.<br>Note 3: IEEE Std. 802.11ac modulation consists of VHT20, VHT40 and VHT80 (VHT: Very High Throughput). Then EUT support VHT20, VHT40 and VHT80.<br>Note 4: VHT20, VHT40 and VHT80 use a combination of OFDM-BPSK, QPSK, 16QAM, 64QAM, 256QAM modulation.<br>Note 5: Modulation modes consist of below configuration:<br>11a: IEEE 802.11a, HT20/HT40: IEEE 802.11n, VHT20/VHT40/VHT80: IEEE 802.11ac |                                 |                 |

**1.1.2 Antenna Information**

| Ant. | Brand    | Model Name       | Antenna Type | Connector | Remark  |
|------|----------|------------------|--------------|-----------|---------|
| 1    | JEM      | JEMPCBWIFI-2     | PIFA         | I-Pex     | Group 1 |
| 2    | JEM      | JEMPCBWIFI-1     | PIFA         | I-Pex     |         |
| 3    | JEM      | JEMPDIPOLEWIFI-1 | Dipole       | I-Pex     | Group 2 |
| 4    | JEM      | JEMPDIPOLEWIFI-1 | Dipole       | I-Pex     |         |
| 5    | FEIYUXIN | 3.07.XXXX        | Dipole       | I-Pex     | Group 3 |
| 6    | FEIYUXIN | 3.07.XXXX        | Dipole       | I-Pex     |         |

| Ant. | Port | Gain (dBi) |
|------|------|------------|
|      |      | 5G         |
| 1    | 1    | 3.58       |
| 2    | 2    | 2.60       |
| 3    | 1    | 3.53       |
| 4    | 2    | 3.53       |
| 5    | 1    | 3.72       |
| 6    | 2    | 3.72       |

**For 5GHz function:**

For IEEE 802.11 a/n/ac mode (2TX/2RX)

Port 1 and port 2 could transmit/receive simultaneously.

### 1.1.3 DFS Band Carrier Frequencies

There are three bandwidth systems.

For 20MHz bandwidth systems, use Channel 52, 56, 60, 64, 100, 104, 108, 112, 116, 132, 136, 140, 144.

For 40MHz bandwidth systems, use Channel 54, 62, 102, 110, 134, 142.

For 80MHz bandwidth systems, use Channel 58, 106, 138.

| Frequency Band            | Channel No. | Frequency | Channel No. | Frequency |
|---------------------------|-------------|-----------|-------------|-----------|
| 5250~5350 MHz<br>U-NII-2A | 52          | 5260 MHz  | 60          | 5300 MHz  |
|                           | 54          | 5270 MHz  | 62          | 5310 MHz  |
|                           | 56          | 5280 MHz  | 64          | 5320 MHz  |
|                           | 58          | 5290 MHz  | -           | -         |
| 5470~5725 MHz<br>U-NII-2C | 100         | 5500 MHz  | 132         | 5660 MHz  |
|                           | 102         | 5510 MHz  | 134         | 5670 MHz  |
|                           | 104         | 5520 MHz  | 136         | 5680 MHz  |
|                           | 106         | 5530 MHz  | 138         | 5690 MHz  |
|                           | 108         | 5540 MHz  | 140         | 5700 MHz  |
|                           | 110         | 5550 MHz  | 142         | 5710 MHz  |
|                           | 112         | 5560 MHz  | 144         | 5720 MHz  |
|                           | 116         | 5580 MHz  | -           | -         |

## 1.2 Testing Applied Standards

According to the specifications of the manufacturer, the EUT must comply with the requirements of the following standards:

- ◆ KDB 905462 D02 UNII DFS Compliance Procedures New Rules v02

## 1.3 Testing Location Information

| Testing Location                           |               |                                                                                  |                         |             |

(Notes 1 and 2). |
| U-NII Detection Bandwidth                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Minimum 100% of the 99% power bandwidth (Note 3).                                                     |
| Note 1: Channel Move Time and the Channel Closing Transmission Time should be performed with Radar Type 0. The measurement timing begins at the end of the Radar Type 0 burst.<br>Note 2: The Channel Closing Transmission Time is comprised of 200 milliseconds starting at the beginning of the Channel Move Time plus any additional intermittent control signals required to facilitate Channel changes (an aggregate of 60 milliseconds) during the remainder of the 10 second period. The aggregate duration of control signals will not count quiet periods in between transmissions.<br>Note 3: During the U-NII Detection Bandwidth detection test, radar type 0 is used and for each frequency step the minimum percentage of detection is 90%. Measurements are performed with no data traffic. |                                                                                                       |

| Table D.2: Interference threshold values                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                  |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|
| Maximum Transmit Power                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Value (see note) |
| EIRP $\geq$ 200 mW                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | -64 dBm          |
| EIRP < 200 mW and PSD < 10dBm/MHz                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | -62 dBm          |
| EIRP < 200 mW and PSD $\geq$ 10dBm/MHz                                                                                                                                                                                                                                                                                                                                                                                                                                                              | -64 dBm          |
| Note 1: This is the level at the input of the receiver assuming a 0 dBi receive antenna.<br>Note 2: Throughout these test procedures an additional 1 dB has been added to the amplitude of the test transmission waveforms to account for variations in measurement equipment. This will ensure that the test signal is at or above the detection threshold level to trigger a DFS response.<br>Note3: EIRP is based on the highest antenna gain. For MIMO devices refer to KDB Publication 662911. |                  |

### 3.1.2 Applicability of DFS Requirements Prior to Use of a Channel

| Requirement                     | DFS Operational mode |                                |                             |
|---------------------------------|----------------------|--------------------------------|-----------------------------|
|                                 | Master               | Client without radar detection | Client with radar detection |
| Non-Occupancy Period            | Yes                  | Not required<br>(See the note) | Yes                         |
| DFS Detection Threshold         | Yes                  | Not required                   | Yes                         |
| Channel Availability Check Time | Yes                  | Not required                   | Not required                |
| U-NII Detection Bandwidth       | Yes                  | Not required                   | Yes                         |

Note :

According to KDB 905462 D03 Client Without DFS New Rules v01r02 (b) 6."An analyzer plot that contains a single 30-minute sweep on the original channel "

### 3.1.3 Applicability of DFS Requirements during Normal Operation

| Requirement                       | DFS Operational mode |                                |                             |
|-----------------------------------|----------------------|--------------------------------|-----------------------------|
|                                   | Master               | Client without radar detection | Client with radar detection |
| DFS Detection Threshold           | Yes                  | Not required                   | Yes                         |
| Channel Closing Transmission Time | Yes                  | Yes                            | Yes                         |
| Channel Move Time                 | Yes                  | Yes                            | Yes                         |
| U-NII Detection Bandwidth         | Yes                  | Not required                   | Yes                         |

| Additional requirements for devices with multiple bandwidth modes | Master Device or Client with Radar Detection | Client Without Radar Detection                       |
|-------------------------------------------------------------------|----------------------------------------------|------------------------------------------------------|
| U-NII Detection Bandwidth and Statistical Performance Check       | All BW modes must be tested                  | Not required                                         |
| Channel Move Time and Channel Closing Transmission Time           | Test using widest BW mode available          | Test using the widest BW mode available for the link |
| All other tests                                                   | Any single BW mode                           | Not required                                         |

**Note:** Frequencies selected for statistical performance check (Section 7.8.4) should include several frequencies within the radar detection bandwidth and frequencies near the edge of the radar detection bandwidth. For 802.11 devices it is suggested to select frequencies in each of the bonded 20 MHz channels and the channel center frequency.

**3.1.4 User Access Restrictions**

| User Access Restrictions            |                                                                                                                                                                                                                                              |
|-------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <input checked="" type="checkbox"/> | DFS controls (hardware or software) related to radar detection are NOT accessible to the user. Manufacturer statement confirming that information regarding the parameters of the detected Radar Waveforms is not available to the end user. |

**3.1.5 Channel Loading/Data Streaming**

|                                     |                                                                                                |
|-------------------------------------|------------------------------------------------------------------------------------------------|
| <input type="checkbox"/>            | The data file (MPEG-4) has been transmitting in a streaming mode.                              |
| <input checked="" type="checkbox"/> | Software to ping the client is permitted to simulate data transfer with random ping intervals. |
| <input checked="" type="checkbox"/> | Minimum channel loading of approximately 17%.                                                  |
| <input type="checkbox"/>            | Unicast protocol has been used.                                                                |

## 3.2 Radar Test Waveform Calibration

### 3.2.1 Short Pulse Radar Test Waveforms

| Radar Type                                                                                                                                  | Pulse Width (μsec) | PRI (μsec)                                      | Number of Pulses                                                                                         | Minimum Percentage of Successful Detection | Minimum Trials |
|---------------------------------------------------------------------------------------------------------------------------------------------|--------------------|-------------------------------------------------|----------------------------------------------------------------------------------------------------------|--------------------------------------------|----------------|
| 0                                                                                                                                           | 1                  | 1428                                            | 18                                                                                                       | See Note 1                                 | See Note 1     |
| 1A                                                                                                                                          | 1                  | 15 unique PRI in KDB 905462 D02 Table 5a        | $\text{Roundup}\left\{\left(\frac{1}{360}\right) \times \left(\frac{19 \times 10^6}{PRI}\right)\right\}$ | 60%                                        | 15             |
| 1B                                                                                                                                          | 1                  | 15 unique PRI within 518-3066, Excluding 1A PRI |                                                                                                          | 60%                                        | 15             |
| 2                                                                                                                                           | 1-5                | 150-230                                         | 23-29                                                                                                    | 60%                                        | 30             |
| 3                                                                                                                                           | 6-10               | 200-500                                         | 16-18                                                                                                    | 60%                                        | 30             |
| 4                                                                                                                                           | 11-20              | 200-500                                         | 12-16                                                                                                    | 60%                                        | 30             |
| Aggregate (Radar Types 1-4)                                                                                                                 |                    |                                                 |                                                                                                          | 80%                                        | 120            |
| <b>Note 1:</b> Short Pulse Radar Type 0 should be used for the detection bandwidth test, channel move time, and channel closing time tests. |                    |                                                 |                                                                                                          |                                            |                |

A minimum of 30 unique waveforms are required for each of the short pulse radar types 1 through 4. If more than 30 waveforms are used for short pulse radar types 1 through 4, then each additional waveform must also be unique and not repeated from the previous waveforms. The aggregate is the average of the percentage of successful detections of short pulse radar types 1-4.

### 3.2.2 Long Pulse Radar Test Waveform

| Radar Type | Pulse Width (μsec) | Chirp Width (MHz) | PRI (μsec) | Number of Pulses per Burst | Number of Bursts | Minimum Percentage of Successful Detection | Minimum Trials |
|------------|--------------------|-------------------|------------|----------------------------|------------------|--------------------------------------------|----------------|
| 5          | 50-100             | 5-20              | 1000-2000  | 1-3                        | 8-20             | 80%                                        | 30             |

Each waveform is defined as follows:

- The transmission period for the Long Pulse Radar test signal is 12 seconds.
- There are a total of 8 to 20 Bursts in the 12 second period, with the number of Bursts being randomly chosen. This number is Burst Count.
- Each Burst consists of 1 to 3 pulses, with the number of pulses being randomly chosen. Each Burst within the 12 second sequence may have a different number of pulses.
- The pulse width is between 50 and 100 microseconds, with the pulse width being randomly chosen. Each pulse within a Burst will have the same pulse width. Pulses in different Bursts may have different pulse widths.
- Each pulse has a linear FM chirp between 5 and 20 MHz, with the chirp width being randomly chosen. Each pulse within a transmission period will have the same chirp width. The chirp is centered on the pulse. For example, with a radar frequency of 5300 MHz and a 20 MHz chirped signal, the chirp starts at 5290 MHz and

ends at 5310 MHz.

- If more than one pulse is present in a Burst, the time between the pulses will be between 1000 and 2000 microseconds, with the time being randomly chosen. If three pulses are present in a Burst, the time between the first and second pulses is chosen independently of the time between the second and third pulses.
- The 12 second transmission period is divided into even intervals. The number of intervals is equal to Burst Count. Each interval is of length  $(12,000,000 / \text{Burst Count})$  microseconds. Each interval contains one Burst. The start time for the Burst, relative to the beginning of the interval, is between 1 and  $[(12,000,000 / \text{Burst Count}) - (\text{Total Burst Length}) + (\text{One Random PRI Interval})]$  microseconds, with the start time being randomly chosen. The step interval for the start time is 1 microsecond. The start time for each Burst is chosen independently.

### 3.2.3 Frequency Hopping Radar Test Waveform

| Radar Type | Pulse Width (μsec) | PRI (μsec) | Pulses per Hop | Hopping Rate (kHz) | Hopping Sequence Length (ms) | Minimum Percentage of Successful Detection | Minimum Trials |
|------------|--------------------|------------|----------------|--------------------|------------------------------|--------------------------------------------|----------------|
| 6          | 1                  | 333        | 9              | 0.333              | 300                          | 70%                                        | 30             |

The FCC Type 6 waveform uses a static waveform with 100 bursts in the instruments ARB. In addition, the RF list mode is operated with a list containing 100 frequencies from a randomly generated list and it had be ensured that at least one of the random frequencies falls into the UNII Detection Bandwidth of the DUT. Each burst from the waveform file initiates a trigger pulse at the beginning that switches the RF list from one item to the next one.

### 3.2.4 DFS Threshold Level

| DFS Threshold Level                                                                                                                                                                                        |                                                             |  |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------|--|
| DFS Threshold level: -63 dBm                                                                                                                                                                               | <input type="checkbox"/> at the antenna connector           |  |
|                                                                                                                                                                                                            | <input checked="" type="checkbox"/> in front of the antenna |  |
| The Interference <b>Radar Detection Threshold Level</b> is $-64 \text{ dBm} + 0 [\text{dBi}] + 1 \text{ dB} = -63 \text{ dBm}$ . That had been taken into account the output power range and antenna gain. |                                                             |  |

### 3.2.7 Test Setup

A spectrum analyzer is used as a monitor to verify that the EUT has vacated the Channel within the (Channel Closing Transmission Time and Channel Move Time, and does not transmit on a Channel during the Non-Occupancy Period after the detection and Channel move.

## 3.2.8 Data traffic Plot

### 3.3 UNII Detection Bandwidth

#### 3.3.1 UNII Detection Bandwidth Limit

| Channel Bandwidth (MHz) | 99% Occupied Bandwidth (MHz) | UNII Detection Bandwidth Min. Limit (MHz) |
|-------------------------|------------------------------|-------------------------------------------|
| 20                      | 18.402                       | 19                                        |
| 40                      | 37.577                       | 38                                        |
| 80                      | 76.517                       | 77                                        |

UNII Detection Bandwidth is minimum 100% of the 99% power bandwidth. A single radar Burst is generated for a minimum of 10 trials, and the response of the UUT is noted. The UUT must detect the Radar Waveform 90% or more of the time.

#### 3.3.2 Measuring Instruments

Refer a test equipment and calibration data table in this test report.

#### 3.3.3 Test Procedures

| Test Method                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <input checked="" type="checkbox"/> During the U-NII Detection Bandwidth detection test, radar type 0 is used and for each frequency step the minimum percentage of detection is 90 percent. Measurements are performed with no data traffic. The EUT is set up as a standalone device (no associated Client and no traffic). The radar frequency is increased in 1 MHz steps, repeating the above test sequence, until the detection rate falls below 90%. The highest frequency at which detection is greater than or equal to 90% is denoted as $F_H$ . The radar frequency is decreased in 1 MHz steps, repeating the above test sequence, until the detection rate falls below 90%. The lowest frequency at which detection is greater than or equal to 90% is denoted as $F_L$ . UNII Detection Bandwidth = $F_H - F_L$ . |

### 3.3.4 Test Result of UNII Detection Bandwidth

| EUT Frequency=5500 MHz                      |                                                     |   |   |   |   |   |   |   |   |    |                    |

### 3.4 Channel Availability Check (CAC)

#### 3.4.1 Channel Availability Check Limit

| Channel Availability Check Limit    |                                                                                                                                                                                                                |
|-------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <input checked="" type="checkbox"/> | The EUT shall perform a Channel Availability Check to ensure that there is no radar operating on the channel. After power-up sequence, receive at least 1 minute (60 sec) on the intended operating frequency. |

#### 3.4.2 Measuring Instruments

Refer a test equipment and calibration data table in this test report.

#### 3.4.3 Test Procedures

| Test Method                         |                                                                                                                                                                                                                                                                                                       |
|-------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <input checked="" type="checkbox"/> | For Initial Channel Availability Check Time. The EUT does not emit beacon, control, or data signals on the test Channel until the power-up sequence has been completed and the UNII device checks for Radar Waveforms for one minute on the test Channel. This test does not use any Radar Waveforms. |
| <input checked="" type="checkbox"/> | For Radar Burst at the Beginning of the Channel Availability Check Time. To verify successful radar detection on the selected Channel during a period equal to the Beginning of the Channel Availability Check Time.                                                                                  |
| <input checked="" type="checkbox"/> | For Radar Burst at the End of the Channel Availability Check Time. To verify successful radar detection on the selected Channel during a period equal to the End of the Channel Availability Check Time.                                                                                              |

### 3.4.4 Test Result of Initial Channel Availability Check Time

| Modulation Mode  | Freq.    | Radar Test Signal |
|------------------|----------|-------------------|
| 802.11ac (VHT80) | 5530 MHz | N/A               |

The EUT does not transmit any beacon or data transmissions until at least 1 minute after the completion of the power-on cycle (21.06 sec). The initial power up time of the EUT is indicated by marker 1 (21.06 sec). Initial beacons/data transmissions are indicated by marker 2 (81.06 sec).

**Test Result**
**Complied**

### 3.4.5 Test Result of Radar Burst at the Beginning of the Channel Availability Check Time

| Modulation Mode  | Freq. (MHz) | Radar Type Signal |
|------------------|-------------|-------------------|
| 802.11ac (VHT80) | 5530 MHz    | N/A               |

Visual indication on the EUT of successful detection of the radar Burst will be recorded and reported. Observation of emissions will continue for 278.250 seconds after the radar Burst has been generated. Verify that during the 300 seconds measurement window no EUT transmissions occurred.

**Test Result**
**Complied**

### 3.4.6 Test Result of Radar Burst at the End of the Channel Availability Check Time

| Modulation Mode  | Freq. (MHz) | Radar Type Signal |
|------------------|-------------|-------------------|
| 802.11ac (VHT80) | 5530 MHz    | N/A               |

Visual indication on the EUT of successful detection of the radar Burst will be recorded and reported. Observation of emissions will continue for 228.13 seconds after the radar Burst has been generated. Verify that during the 300 seconds measurement window no EUT transmissions occurred.

**Test Result**
**Complied**

### 3.5 In-service Monitoring

#### 3.5.1 In-service Monitoring Limit

| In-service Monitoring Limit       |                                                               |
|-----------------------------------|---------------------------------------------------------------|
| Channel Move Time                 | 10 sec                                                        |
| Channel Closing Transmission Time | 200 ms + an aggregate of 60 ms over remaining 10 sec periods. |
| Non-occupancy period              | Minimum 30 minutes                                            |

#### 3.5.2 Measuring Instruments

Refer a test equipment and calibration data table in this test report.

#### 3.5.3 Test Procedures

| Test Method                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|-------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <input checked="" type="checkbox"/> | Verified during In-Service Monitoring; Channel Closing Transmission Time, Channel Move Time. Client Device will associate with the EUT. Observe the transmissions of the EUT at the end of the radar Burst on the Operating Channel for duration greater than 10 seconds. Measure and record the transmissions from the EUT during the observation time (Channel Move Time). Compare the Channel Move Time and Channel Closing Transmission Time limits. |
| <input checked="" type="checkbox"/> | Verified during In-Service Monitoring; Channel Closing Transmission Time, Channel Move Time. One 12sec plot needs to be reported for the Short Pulse Radar Types 0. And zoom-in a 60 ms plot verified channel closing time for the aggregate transmission time starting from 200ms after the end of the radar signal to the completion of the channel move.                                                                                              |
| <input checked="" type="checkbox"/> | Verified during In-Service Monitoring; Non-Occupancy Period. Client Device will associate with the EUT. Observe the transmissions of the EUT at the end of the radar Burst on the Operating Channel for duration greater than 10 seconds. Measure and record the transmissions from the EUT during the observation time (Non-Occupancy Period). Compare the Non-Occupancy Period limits.                                                                 |

### 3.5.4 Test Result of In-service Monitoring

**Modulation Mode:** 802.11ac (VHT80)

| Parameter                                     | Test Result | Limit         |
|-----------------------------------------------|-------------|---------------|
|                                               | Type 0      |               |
| Test Channel (MHz)                            | 5530 MHz    | -             |
| Channel Move Time (sec.)                      | 0.523       | < 10s         |
| Channel Closing Transmission Time (ms) (Note) | 3.300       | < 60ms        |
| Non-Occupancy Period (min.)                   | $\geq 30$   | $\geq 30$ min |

Note: The Channel Closing Transmission Time is comprised of 200 milliseconds starting at the beginning of the Channel Move Time plus any additional intermittent control signals required to facilitate a Channel move (an aggregate of 60 milliseconds) during the remainder of the 10 seconds period. The aggregate duration of control signals will not count quiet periods in between transmissions.

### 3.5.5 Test Plot of In-Service Monitoring for Channel Move Time

### 3.5.6 Test Plot of In-Service Monitoring for Channel Closing Transmission Time

| Modulation Mode  | Freq.    | Radar Type |
|------------------|----------|------------|
| 802.11ac (VHT80) | 5530 MHz | 0          |

Channel Closing Transmission Time is comprised of 1200 ms starting at the beginning of the Channel Move Time plus 60ms additional intermittent control signals

### 3.5.7 Test Plot of In-Service Monitoring for Non-Occupancy Period

| Modulation Mode  | Freq.    |
|------------------|----------|
| 802.11ac (VHT80) | 5530 MHz |

#### Non-Occupancy Period

During the 30 minutes observation time, UUT did not make any transmissions on a channel after a radar signal was detected on that channel by either the Channel Availability Check or the In-Service Monitoring.

### 3.6 Statistical Performance Check

#### 3.6.1 Statistical Performance Check Limit

| Radar Type                  | Minimum Percentage of Successful Detection (Pd) | Minimum Trials |
|-----------------------------|-------------------------------------------------|----------------|
| 1                           | 60%                                             | 30             |
| 2                           | 60%                                             | 30             |
| 3                           | 60%                                             | 30             |
| 4                           | 60%                                             | 30             |
| Aggregate (Radar Types 1-4) | 80%                                             | 120            |
| 5                           | 80%                                             | 30             |
| 6                           | 70%                                             | 30             |

The percentage of successful detection is calculated by:

$$\frac{\text{TotalWaveformDetections}}{\text{TotalWaveformTrials}} \times 100 = \text{Probability of Detection Radar Waveform}$$

In addition an aggregate minimum percentage of successful detection across all Short Pulse Radar Types 1-4 is required and is calculated as follows:

$$\frac{Pd1 + Pd2 + Pd3 + Pd4}{4}$$

#### 3.6.2 Measuring Instruments

Refer a test equipment and calibration data table in this test report.

#### 3.6.3 Test Procedures

| Test Method                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <input checked="" type="checkbox"/> For Statistical Performance Check test. Demonstrating a minimum channel loading of approximately 17% or greater of the test. Observe the transmissions of the UUT at the end of the Burst on the Operating Channel for duration greater than 10 seconds for Short Pulse Radar Types 1-4 and 6 to ensure detection occurs. Then Observe the transmissions of the UUT at the end of the Burst on the Operating Channel for duration greater than 22 seconds for Long Pulse Radar Type 5 to ensure detection occurs. The device can utilize a test mode to demonstrate when detection occurs to prevent the need to reset the device between trial runs. |

### 3.6.4 Test Result of Statistical Performance Check

Modulation Mode: 802.11ac (VHT20)

## 4 Test Equipment and Calibration Data

| Instrument              | Manufacturer | Model No.    | Serial No. | Spec.             | Calibration Date | Calibration Due Date |
|-------------------------|--------------|--------------|------------|-------------------|------------------|----------------------|
| Spectrum Analyzer       | Keysight     | N9010A       | MY55150165 | 9kHz~7GHz         | 26/ Nov/2019     | 25/ Nov/2020         |
| Vector Signal Generator | Keysight     | N5182B       | MY53051912 | 9kHz ~ 6GHz       | 23/Dec/2019      | 22/Dec/2020          |
| Horn Antenna            | COM-POWER    | AH-118       | 10091      | 1GHz ~ 18GHz      | 10/Jun/2019      | 09/Jun/2020          |
| Horn Antenna            | COM-POWER    | AHA-118      | 711064     | 1GHz ~ 18GHz      | 27/Dec/2019      | 26/Dec/2020          |
| RF cable 8m             | HUBER+SUHNER | SUCOFLEX 104 | CB222      | 25 MHz ~ 26.5 GHz | 21/Mar/2019      | 20/Mar/2020          |
| RF cable 3m             | HUBER+SUHNER | SUCOFLEX 104 | 302338/4   | 25 MHz ~ 26.5 GHz | 21/Mar/2019      | 20/Mar/2020          |

## 5 Measurement Uncertainty

| Test Items        | Uncertainty | Remark                   |
|-------------------|-------------|--------------------------|
| Radiated Emission | 3.9 dB      | Confidence levels of 95% |
| Temperature       | 0.7 °C      | Confidence levels of 95% |
| Humidity          | 4 %         | Confidence levels of 95% |
