Product Name: ASK Ranger II
Model: ASKZ2100HH
FCC ID: N8KASKZ21A
IC ID: 6657A-ASKZ21A

Model Difference Letter

This product is a handheld remote control with a maximum of 21 buttons. The handheld can have anywhere from 1 to 21 buttons. This is determined on a per-order basis. The arrangement of which button slots are populated is determined on a per-order basis as well. That is, if there are 10 buttons populated, they could be the upper 10 buttons, the lower 10 buttons, or 10 buttons randomly distributed among the possible 21 positions.

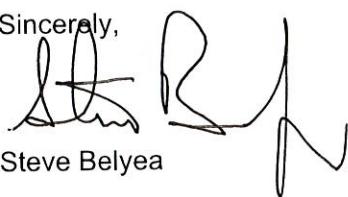

The number of buttons dictates the model number. A 21-button handheld has the model number ASKZ2100HH, a 13 button handheld is ASKZ1300HH, and a 6 button handheld is ASKZ600HH.

The addition of a button involves drilling a hole in the plastic enclosure and inserting a rubber button. There are no changes to the printed circuit board or to the RF section.

Included in the package will be only a single image of the exterior of the handheld because there are hundreds of combinations of the button patterns that we could have, prohibitively more than we could individually photograph.

Thank you for your cooperation.

Sincerely,

Steve Belyea
