TeleEye III

TeleEye III is a transmission unit that can accept up to 4 video inputs: Channel 1 to Channel 4 are all Line In video sources. TeleEye III compresses the video signal and transmits it to PC through a RJ45 network cable. The PC acts as a receiver that decompresses the signal data to reproduce the video image. Besides, TeleEye III has four alarm inputs and one switch output for control purpose. The two dedicated RS232 ports are used for future development.
