To Whom It May Concern;

In the case of the X-Tech models 4418 and 4318, the GSM modem module output power for GSM850 is limited to +33dBm and +30dBm for PCS1900. Our antenna is fairly inefficient and has some losses. In addition, we have inserted a 50 ohm 10db attenuator in the transmitter path to ensure the transmitter always "sees" a stable load. The measured Total Radiated Power (TRP) is within the expected range.
