

INTERTEK TESTING SERVICES

Purpose of Application

The purpose of this application is to report changes in the latest certified product for reason of costing control and enhancing sensitivity of the unit. The RF module of base unit and handset are identical in, construction, dimensions, and electrical circuits except the PCB layout due to the changed of Combo IC format from QFP to Dice format. Other modifications are stated as follows:

Base Unit: 1. The transmitter antenna changes from a spiral type antenna to a soft wire.
2. The receiver antenna changes from a soft wire to a spiral type.

These changes don't intend for maximum power and don't change on field strength ratings. Other designs including electronic, electrical, mechanical design, and cosmetics are remained the same.
