

INTERTEK TESTING SERVICES

Purpose of Application

The purpose of this application is to report changes in the previous certified product for production reason. The main modification is 2 PCBs (power amp and melody ringer) were combined into one PCB assembly. The RF module of base unit is identical in, construction, dimensions, and electrical circuits except the PCB layout due to the changed of Combo IC format from Chip IC (QFP) to Dice format. This change doesn't intend for maximum power and doesn't change on field strength ratings. In addition, there is no any change on handset. All design including electronic, electrical, mechanical, and cosmetics design are remained the same.
