

Labeling

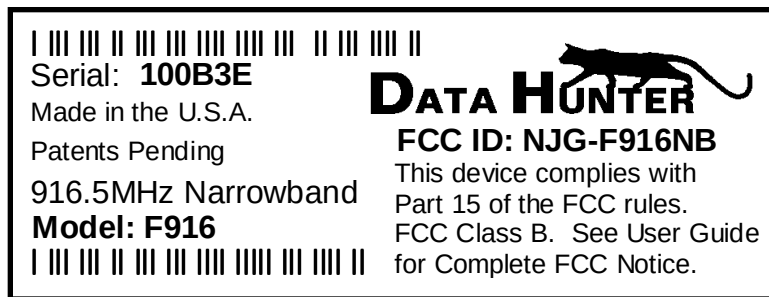

“The Finger” is a miniature data radio designed for OEM (Original Equipment Manufacturers) and does not have the form-factor or space available for a viable external label.

Thus, there are two labeling requirements:

1. The label on the bag containing the component Finger Data Radio Transceiver as it is shipped to the OEM for installation in their device.
2. The external label on the OEM’s device upon which the Finger Data Radio Transceiver will be installed.

Label 1: Primary Label Located on OEM Shipping Bag.

In addition to appropriate notices in the User Manual , Data Sheets and Specifications, each Data Radio delivered to the OEM is labeled with the serial number, model number and FCC information on each individual plastic bag containing a Data Radio.

Since the OEM is producing the final product which incorporates the Finger Data Radio Transceiver, the OEM is responsible for final product labeling.

Label 2: OEM Labeling Requirements

The OEM’s device must display an external label which contains the following language:

**This device contains a previously certified
RF Transceiver module FCC ID: NJG-F916NB**
