

Integrated Technology Co.

**WIRELESS MICROPHONE
M/N DM536A**

OPERATIONAL DESCRIPTION

The DM536A Wireless Microphone is intended for karaoke applications.

The end users voice is converted from analog audio to digital form at the front end of the microphones input. This digital data is then transmitted via a digitally modulated signal to a remote receiver. The transmit frequency is manually selected and displayed on the LCD screen.

In order to prevent interference the end user may select from 6 frequencies ranging 903.5 MHz to 926.4 Mhz.
