

Dear Mr. Leimer,

After confirmation with our customer I can give following reply.

1) The User's Manual and application say that this is an 8 channel device.

However, only 433 MHz was tested. Please explain what is meant by 8 channel?

>> 8 channel means that 8 "digital" coded channels are selected to operate the receiver. The carrier frequency remains 433MHz.

2) Submit data showing compliance with the timing requirements of Section 15.231.

>> The unit complies with 15.231 (1): The unit is a manual operated

transmitter using a switch that automatically deactivates the transmitter within not more than 5 seconds after being released.

Hope by this info you can complete the application request with reference nr.
