## 2. Photograph for the worst case configuration

## 3. Sample Calculation

The emission level measured in decibels above one microvolt  $(dB\mu V)$  was converted into microvolt per meter  $(\mu V/m)$  as shown in following sample calculation.

## For example:

	Measured Value at	907.62MHz	8.2 dBµV
+	Antenna Factor		29.1 dB
+	Cable Loss		5.9 dB
_	Preamplifier		0.0 dB
-	Distance Correction Factor *		0.0 dB
=	Radiated Emission		43.2 dB <i>p</i> V/m
			(= 144.5  /N/m)

<sup>\*</sup> Extrapolated from the measured distance(1.5m) to the specified distance(3m) by an inverse linear distance extrapolation.
