

2. Photograph for the worst case configuration

3. Sample Calculation

The emission level measured in decibels above one microvolt ($\text{dB}\mu\text{V}$) was converted into microvolt per meter ($\mu\text{V}/\text{m}$) as shown in following sample calculation.

For example :

	Measured Value at	59.14MHz	5.5 $\text{dB}\mu\text{V}$
+	Antenna Factor		8.0 dB
+	Cable Loss		1.4 dB
-	Preamplifier		0.0 dB
-	Distance Correction Factor *		0.0 dB
<hr/>			
=	Radiated Emission		14.9 $\text{dB}\mu\text{V}/\text{m}$ (= 5.6 $\mu\text{V}/\text{m}$)

* Extrapolated from the measured distance(1.5m) to the specified distance(3m) by an inverse linear distance extrapolation.
