

RF Exposure Information for Accuspeed Unit

According to OET Bulletin 65, page 41, paragraph three; this unit is excluded from evaluation with respect to MPE limits since its radiated power is under 3 watts, which is the limit for equipment operating at frequencies above 1.5 GHz.

This unit's radiated power has been measured to be 100 mW (EIRP), which is substantially lower than the threshold stated in that document. The transceiver in this unit outputs about 5 mW of power at the frequency of 24.125 GHz.
