Re: **FCC ID NUF-P350-1006**

Applicant: **Time Domain Corporation**

Correspondence Reference Number: **32772**

731 Confirmation Number: **EA897318**

Dear Mrs. Elliot:

In response to the FCC ID labeling issue on the TAG. We have a short-term and long-term solution.

Short-term:

We have produced approximately 3000 of the housing bottoms that have the FCC ID in the incorrect format. We intend to over label that area with the FCC ID in the correct format and the unit S/N. I have submitted the PDF of the new label (320-0173), the label stock is from Zebra, and the ribbon from Zebra. We use Zebra Ultimate 3000T label stock with the 5100 series resin based ribbon. The label size needed for the TAG will be custom. In the interim we will use a larger label stock and cut to size.

Long-term:

We will have the characters removed from the tool and have a nondescript bottom. In final assembly we will continue to use the label as recommended in the short-term. The current tool is a "soft-tool" with a limited production life. When we order a new tool we will include the FCC ID in the correct format as shown in our newly submitted drawing.

Cal Tag:

When a tag is installed in the antenna housings the FCC ID label (320-0173) will be placed as shown in the antenna assembly drawing (10A-0058E).

Yours truly,
