The test report 02-101.pdf (SLG RS422) also is valid for the SLG RS232 because:

The difference between MOBY U SLG U92 RS232 and MOBY U SLG U92 RS422 is the
interface to the external computer. These 2 units have the same PCB, but
there is one IC (interface driver) different placed on the PCB.

The labelling on the photos is not the actual status. The correct labelling you can see on the drawings in Exhibit 1
(Label and Label placement).
