

RF EXPOSURE INFO

6.1 RF Safety Requirements to 2.1093

According to Section 3 of Supplement C to OET Bulletin 65, Part 15 Transmitters are categorically excluded from Routine Environmental Evaluation by measurement or precise computations unless otherwise required by the Commissions

The unit under evaluation has an external antenna of 3 dBi gain with a measured output power output of 0.0682 Watts at the antenna terminals.

Due to the low power of the EUT, environmental evaluation should be deemed unnecessary since the EUT's operational frequency range is 902-928 MHz and the ERP is considerably less than 1.5 Watts.
