

RF Safety Requirements to 2.1091

According to Section 3 of Supplement C to OET Bulletin 65, Part 15 Transmitters are categorically excluded from Routine Environmental Evaluation by measurement or precise computations unless otherwise required by the Commissions

The unit under evaluation has an internal antenna of 0 dBi gain with an calculated power output of 0.005 Watts when measured via a radiated method at 3 meters (see section 2.7 of report).

Due to the low power of the EUT, environmental evaluation should be deemed unnecessary since the EUT's operational frequency range is 2.4-2.4835 GHz and the ERP is considerably less the 3 Watts.
