

## Federal Communications Commission Authorization and Evaluation Division

June 12, 2024

To whom it may concern:

A sentence will be added to the important safety information pages in the manual, as follows:

**To satisfy FCC RF exposure guidelines, this device must be connected to a suitable antenna in order to produce the specific characteristics of a 100w FM signal operating at 30 meters height above average terrain (HAAT).**

**At minimum, for general public exposure this device and its antenna must operate with a separation distance of at least 4 meters from all persons. Limited exposure at closer distances may be undertaken for maintenance purposes, but RF exposure guidelines should be respected and RF meters used to measure actual exposure levels.**

Sincerely,

Tony Peterle
