> Question #1: Please provide additional external photos to show 4
buttons.
>
> Question #2: Page 9 of the test report indicates that "The upper
frequency range of this test was 5 GHz". Since the fundamental frequency
is 907.1695MHz, based upon FCC15.33(a), you should investigate upto the
10th harmonic of the highest fundamental frequency, which is 9.1GHz.
Please provide additional radiated spurious emission test from 5-9.1GHz.
