The Transmitter Model ELA RTT is part of an emergency lighting unit. The emergency lighting unit is equipped with a battery charger circuitry to detect AC power failures. The lighting unit provides 90 minutes of emergency lighting along a path of egress. The unit also contains a RF receiver circuit that controls a solid state switch. This solid state switch acts as a test switch for the unit. Pressing the button on the RF remote transmitter remotely activates this test switch via the RF receiver circuit.

The SAW stabilized transmitter is based on the well-known Colpitts oscillator topology. This design is a single transistor type that performs both the function of the oscillation and transmission via a printed circuit coil, which serves as the transmitting antenna.

June 20, 2000

I, an officer of LITHONIA LIGHTING, do hereby authorize Intertek Testing Services to act on our behalf in front of the Federal Communications Commission with respect to all matters relating to certification of equipment under Part 15 of the FCC Rules until further notice.

The applicant certifies that, in case of an individual applicant, he or she is not subject to a denial of federal benefits, that includes FCC benefits, pursuant to Section 5301 of the Anti-Drug Abuse Act of 1988, 21 U.S.C. 853(a), or, in the case of a non-individual applicant (e.g. corporation, partnership or other unincorporated association), no party to the application is subject to a denial of federal benefits, that includes FCC benefits, pursuant to that section.
