FCC/IC – Test report

Report Number : **60/790.15.004.01** Date of Issue: April 1, 2015

Model : **Joule GPS Plus**

Product Type : **GPS Bike Computer**

Applicant : **DAYTON INDUSTRIAL CO.,LTD**

Address : **2-12 Kwai Fat Road,11-A Kwai Chung,New Territories,Hong Kong**

Production Facility : **KENDY ENTERPISE LTD**

Address : **2-12 Kwai Fat Road,11-A Kwai Chung,New Territories,Hong Kong**

Test Result : ☒ **Positive** ☐ **Negative**

Total pages including Appendices : **44**

TÜV SÜD Hong Kong Ltd. is a subcontractor to TÜV Product Service, GmbH according to the principles outlined in ISO 17025.

TÜV SÜD Hong Kong Ltd. reports apply only to the specific samples tested under stated test conditions. Construction of the actual test samples has been documented. It is the manufacturer's responsibility to assure that additional production units of this model are manufactured with identical electrical and mechanical components. The manufacturer/importer is responsible to the Competent Authorities in Europe for any modifications made to the production units which result in non-compliance to the relevant regulations. TÜV SÜD Hong Kong Ltd. shall have no liability for any deductions, inferences or generalizations drawn by the client or others from TÜV SÜD Hong Kong Ltd. issued reports.

This report is the confidential property of the client. As a mutual protection to our clients, the public and ourselves, extracts from the test report shall not be reproduced except in full without our written approval.

3. Description of the Equipment Under Test

Description of the Equipment Under Test

Product:	GPS Bike Computer
Model no.:	Joule GPS Plus
Serial number:	NIL
Options and accessories:	NIL
FCC ID:	O4GJ2BLE
IC:	7666A-J2BLE
Rated Voltage:	3.7 VDC
Rated Current:	NIL
Rated Power:	NIL
Frequency:	2402-2480MHz
RF Transmission Frequency:	2402-2480MHz
Antenna gain:	0 dBi
No. of Operated Channel:	40
Modulation:	GFSK
Description of the EUT:	Battery operated –Internal 3.7Vrechargeable battery

4. Summary of Test Standards

g

Test Standards	
FCC Part 15 Subpart C, Intentional Radiators, 10-1-12 Edition	PART 15 – RADIO FREQUENCY DEVICES Subpart C – Intentional Radiators
RSS-Gen Issue 4 November 2014	General Requirements and Information for the Certification of Radio Apparatus
RSS-210 Issue 8 December 2010	RSS-210 — Licence-exempt Radio Apparatus (All Frequency Bands): Category I Equipment
ANSI C63.10:2013	American National Standard of Procedures for Compliance Testing of Unlicensed Wireless Devices

5. Mode of Operation

All the test modes were carried out with the EUT in normal operation, which was shown in this test report and defined as:

Test Mode
Mode 1: GFSK Continuous Transmitting Mode
Mode 2: BT Link Mode
--

Note:

The EUT was programmed to be in continuously transmitting mode and the transmit duty cycle is not less than 98%.
By preliminary testing and verifying three axis (X, Y and Z) position of EUT transmitted status, it was found that “X axis” position was the worst, then the final test was executed the worst condition and test data were recorded in this report.

6. Summary of Test Standards and Results

7. General Remarks

Remarks

This submittal(s) (test report) is intended for FCC ID: O4GJ2BLE complies with the FCC Part 15, Subpart C Rules.

This submittal(s) (test report) is intended for IC: 7666A-J2BLE, complies with the IC RSS 210 and RSS-GEN Rules.

All the configurations of the product were tested and only the worst test results are listed in the report.

SUMMARY:

All tests according to the regulations cited on page 6 were

- ☒ - Performed
- ☐ - **Not** Performed

The Equipment Under Test

- ☒ - **Fulfills** the general approval requirements.
- ☐ - **Does not** fulfill the general approval requirements.

8. Emission Test Results

8.1 AC Line Conducted Emissions

TEST CONFIGURATION

TEST PROCEDURE

1. The equipment was set up as per the test configuration to simulate typical actual usage per the user's manual. The EUT is a tabletop system; a wooden table with a height of 0.8 meters is used and is placed on the ground plane as per ANSI C63.4-2014.
2. Support equipment, if needed, was placed as per ANSI C63.4-2014.
3. All I/O cables were positioned to simulate typical actual usage as per ANSI C63.4-2014.
4. The EUT received AC120V/60Hz power through a Line Impedance Stabilization Network (LISN) which supplied power source and was grounded to the ground plane.
5. All support equipments received AC power from a second LISN, if any.
6. The EUT test program was started. Emissions were measured on each current carrying line of the EUT using a spectrum Analyzer / Receiver connected to the LISN powering the EUT. The LISN has two monitoring points: Line 1 (Hot Side) and Line 2 (Neutral Side). Two scans were taken: one with Line 1 connected to Analyzer / Receiver and Line 2 connected to a 50 ohm load; the second scan had Line 1 connected to a 50 ohm load and Line 2 connected to the Analyzer / Receiver.
7. Test setup set: RBW=200 Hz VBW=1 KHz for 9 KHz to 150 KHz and RBW=9 KHz VBW=50 KHz for 150 KHz to 30MHz.
7. Analyzer / Receiver scanned from 150 KHz to 30MHz for emissions in each of the test modes.
8. During the above scans, the emissions were maximized by cable manipulation.

CONDUCTED POWER LINE EMISSION LIMIT

For unintentional device, according to § 15.207 and RSS-Gen Line Conducted Emission Limits is as following :

Frequency (MHz)	Maximum RF Line Voltage (dBμV)			
	CLASS A		CLASS B	
	Q.P.	Ave.	Q.P.	Ave.
0.15 - 0.50	79	66	66-56*	56-46*
0.50 - 5.00	73	60	56	46
5.00 - 30.0	73	60	60	50

* Decreasing linearly with the logarithm of the frequency

8.2 Spurious Emissions at Antenna Terminals

TEST CONFIGURATION

TEST PROCEDURE

The Spurious RF conducted emissions compliance of RF radiated emission should be measured by following the guidance in ANSI C63.10-2013 with respect to maximizing the emission by rotating the EUT, measuring the emission while the EUT is situated in three orthogonal planes (if appropriate), adjusting the measurement antenna height and polarization etc. Set RBW=100 kHz and VBW= 300 KHz to measure the peak field strength, and measure frequency range from 9 KHz to 26.5GHz.

LIMIT

1. Below -20dB of the highest emission level in operating band.
2. Fall in the restricted bands listed in section 15.205. The maximum permitted average field strength is listed in section 15.209.

8.3 Spurious Radiated Emissions

TEST CONFIGURATION

Frequency range 9 KHz – 30MHz

Frequency range 30MHz – 1000MHz

Frequency range above 1GHz-25GHz

TEST PROCEDURE

1. The EUT was placed on a turn table which is 0.8m above ground plane for below 1GHz and EUT was placed on a turn table which is 1.5m above ground plane with absorber refer to ANSI C63.10:2013
2. Maximum procedure was performed by raising the receiving antenna from 1m to 4m and rotating the turn table from 0°C to 360°C to acquire the highest emissions from EUT
3. And also, each emission was to be maximized by changing the polarization of receiving antenna both horizontal and vertical.
4. Repeat above procedures until all frequency measurements have been completed.
- 5 The EUT minimum operation frequency was 32.768 KHz and maximum operation frequency was 2480MHz.so radiated emission test frequency band from 9 KHz to 25GHz.
6. Test antenna was located distance from the EUT on an adjustable mast, and the antenna used as below table.

Test frequency range	Test antenna used	Test Distance used
9KHz-30MHz	Loop Antenna	3m
30MHz-1GHz	Bilog Antenna	3m
1GHz-18GHz	Horn Antenna	3m
18GHz-26.5GHz	Horn Antenna	1m
26.5GHz-40GHz	Horn Antenna	1m

7. Set the spectrum analyzer/receiver in the following setting as:

9 KHz to 30MHz (Test Receiver):

RBW=200 Hz/VBW=1 KHz/Sweep=Auto/Dector: QP for 9 KHz to 150 KHz and RBW=9 KHz/VBW=120

KHz/Sweep=Auto/Dector: QP for 150 KHz to 30MHz

30MHz to 1 GHz (Test Receiver):

RBW=120 KHz/VBW=1MHz/Sweep=Auto/Dector: QP

Above 1 GHz (Spectrum analyzer)

a) Peak values: RBW=1MHz/VBW=3MHz/Sweep=Auto/Dector: Peak

b) Average values: RBW=1MHz/VBW=10Hz/Sweep=1s/Dector: Peak

RADIATION LIMIT

For intentional device, according to § 15.209(a), the general requirement of field strength of radiated emission from intentional radiators at a distance of 3 meters shall not exceed the following table.

Remark:

- The EUT was placed on the top of the turntable in test site area.
- The test shall be made in the operation mode. The turntable was rotated by 360 degrees to determine the position of the highest radiation.
- For emissions measurement, the receiving antenna was placed 3 meters far away from the turntable
- The antenna was fixed on the same height with the EUT to find each suspected emissions of both horizontal and vertical polarization.
- Adjust the emission and slightly rotate the turntable to locate the position with maximum reading.
- Adjust the emission and slightly height of the antenna to locate the position with maximum reading.
- Margin=Results-Limit

8.4 6dB & 99%Bandwidth

TEST CONFIGURATION

TEST PROCEDURE

The transmitter output was connected to the spectrum analyzer through an attenuator. The bandwidth of the fundamental frequency was measured by spectrum analyzer with RBW=100 KHz and VBW=300 KHz.

The 6dB bandwidth is defined as the total spectrum the power of which is higher than peak power minus 6dB.

According to KDB558074 D01 V03 for one of the following procedures may be used to determine the modulated DTS device signal bandwidth.

1. Set RBW = 100 kHz.
2. Set the video bandwidth (VBW) = 300 KHz.
3. Detector = Peak.
4. Trace mode = max hold.
5. Sweep = auto couple.
6. Allow the trace to stabilize.
7. Measure the maximum width of the emission that is constrained by the frequencies associated with the two outermost amplitude points (upper and lower frequencies) that are attenuated by 6 dB relative to the maximum level measured in the fundamental emission.
8. Measure the maximum width of the emission that use 99% occupied bandwidth function.

8.5 Peak Output Power Measurements

TEST CONFIGURATION

TEST PROCEDURE

According to KDB558074 D01 DTS Measurement Guidance Section 9.1 Maximum peak conducted output power, 9.1.1. The maximum peak conducted output power may be measured using a broadband peak RF power meter. The power meter shall have a video bandwidth that is greater than or equal to the DTS bandwidth and shall utilize a fast-responding diode detector.

LIMIT

The Maximum Peak Output Power Measurement is 30dBm.

TEST RESULTS

Date of test : March 9, 2015

Test requirement : FCC §15.247(b)

Test method : ANSI C63.10:2013 and KDB558074

Operating mode : Transmit mode

Frequency channel : 2402/2440/2480MHz

Remarks : Peak Output Power (Conducted)

Test Result
☒ Passed
☐ Not Passed

Frequency (MHz)	Conducted Output Power (dBm)	Limit (dBm)
2402	-1.60	30
2440	-2.42	30
2480	-3.42	30

Note: The relevant measured result has the offset with cable loss already.

8.6 100 kHz Bandwidth of Band Edges

TEST CONFIGURATION

TEST REQUIREMENT

In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement, provided the transmitter demonstrates compliance with the peak conducted power limits. If the transmitter complies with the conducted power limits based on the use of RMS averaging over a time interval, as permitted under paragraph (b)(3) of this section, the attenuation required under this paragraph shall be 30 dB instead of 20 dB. Attenuation below the general limits specified in §15.209(a) is not required. In addition, radiated emissions which fall in the restricted bands, as defined in §15.205(a), must also comply with the radiated emission limits specified in §15.209(a) (see §15.205(c)).

TEST PROCEDURE

1. The EUT was placed on a turn table which is 1.5m above ground plane with absorber refer to ANSI C63.10:2013
2. Maximum procedure was performed by raising the receiving antenna from 1m to 4m and rotating the turn table from 0°C to 360°C to acquire the highest emissions from EUT
3. And also, each emission was to be maximized by changing the polarization of receiving antenna both horizontal and vertical.
4. Repeat above procedures until all frequency measurements have been completed.
5. Test antenna was located 3 distances from the EUT on an adjustable mast.
6. Set the spectrum analyzer/receiver in the following setting as:
Above 1 GHz (Spectrum analyzer)
 - a) Peak values: RBW=1MHz/VBW=3MHz/Sweep=Auto/Dector: Peak
 - b) Average values: RBW=1MHz/VBW=10Hz/Sweep=1s/Dector: Peak

LIMIT

Below -20dB of the highest emission level in operating band.

Radiated emissions which fall in the restricted bands, as defined in § 15.205(a), must also comply with the radiated emission limits specified in § 15.209(a)

TEST RESULTS

Date of test : March 25, 2015

Test requirement : FCC §15.247(d)

Test method : ANSI C63.10:2013

Operating mode : Transmit mode

Frequency channel : 2402MHz & 2480MHz

Remarks : Bandwidth of Band Edges (Radiated)

Test Result
☒ Passed
☐ Not Passed

Channel	Frequency (MHz)	Result (dBuV/m)	Limit (dBuV/m)	Margin (dB)	Remark	Ant.Polar. H / V
2402MHz	2390	52.1	74.00	-21.9	peak	H
	2390	39.5	54.00	-14.5	Average	H
	2390	50.8	74.00	-23.2	peak	V
	2390	37.7	54.00	-16.3	Average	V
2480MHz	2483.5	51.4	74.00	-22.6	peak	H
	2483.5	40.5	54.00	-13.5	Average	H
	2483.5	52.2	74.00	-21.8	peak	V
	2483.5	39.6	54.00	-14.4	Average	V

Remark:

- The EUT was placed on the top of the turntable in test site area.
- The test shall be made in the operation mode. The turntable was rotated by 360 degrees to determine the position of the highest radiation.
- For emissions measurement, the receiving antenna was placed 3 meters far away from the turntable
- The antenna was fixed on the same height with the EUT to find each suspected emissions of both horizontal and vertical polarization.
- Adjust the emission and slightly rotate the turntable to locate the position with maximum reading.
- Adjust the emission and slightly height of the antenna to locate the position with maximum reading.
- Margin=Results-Limit

8.7 Power Spectral Density

TEST CONFIGURATION

TEST PROCEDURE

1. Use this procedure when the maximum peak conducted output power in the fundamental emission is used to demonstrate compliance.
2. Set the RBW = 3 kHz.
3. Set the VBW = 10 KHz.
4. Set the span to 1.5 times the DTS channel bandwidth.
5. Detector = peak.
6. Sweep time = auto couple.
7. Trace mode = max hold.
8. Allow trace to fully stabilize.
9. Use the peak marker function to determine the maximum power level.
10. If measured value exceeds limit, reduce RBW (no less than 3 kHz) and repeat.
11. The resulting peak PSD level must be 8 dBm.

LIMIT

For digitally modulated systems, the power spectral density conducted from the intentional radiator to the antenna shall not be greater than 8 dBm in any 3 kHz band during any time interval of continuous transmission.

TEST RESULTS

See next page.

Date of test : March 9, 2015

Test requirement : FCC §15.247(e)

Test method : ANSI C63.10:2013 and KDB558074

8.8 Antenna Requirement

LIMIT

For intentional device, according to 15.203, an intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device.

And According to 15.247 (b), if transmitting antennas of directional gain greater than 6 dBi are used, the power shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6dBi.

Antenna Connector Construction

The antenna used in this product is PCB antenna. And the maximum Gain of this antenna is 0.0 dBi.

Measurement Parameters

Measurement Parameter	
Detector	Peak
Sweep time	Auto
RBW	3 MHz
VBW	10 MHz
Trace	Max hold

TEST RESULTS

	Low Channel	Middle Channel	High Channel
Conducted power (dBm)	-1.60	-2.42	-3.42
Radiated power (dBm)	-1.80	-2.54	-3.55
Gain (dB)	-0.20	-0.12	-0.13
Measurement uncertainty	$\pm 1.5\text{dB(Cond.)}/3\text{dB(Rad.)}$		

9. Test Equipment List

Radiated Emission

10. System Measurement Uncertainty

For a 95% confidence level, the measurement expanded uncertainties for defined systems, in accordance with the recommendations of ISO 17025 were:

System Measurement Uncertainty

Items		Extended Uncertainty
RE	Field strength (dB μ V/m)	U=3.59dB(9kHz-30MHz) U=5.08dB(30MHz-1GHz) U=4.56dB (1GHz-18GHz) U=4.42dB (18GHz-25GHz)
CE	Disturbance Voltage (dB μ V)	U=2.7dB
