## Specific Absorption Rate information

THE DEVICE MEETS INTERNATIONAL GUIDELINES FOR EXPOSURE TO RADIO WAVES.

The device is a radio transmitter and receiver. It is designed not to exceed the limits for exposure to radio waves (radio frequency electromagnetic fields) recommended by international guidelines. The guidelines were developed by an independent scientific organization (ICNIRP) and **included** a substantial safety margin designed to assure the safety of all persons, regardless of age and health. The radio wave exposure guidelines use a unit of measurement known as the Specific Absorption Rate, or SAR.

Tests for SAR are conducted using standard operating positions with the device transmitting at its highest certified power level in all tested frequency bands. The highest SAR values under the ICNIRP guidelines for your device model are listed below:

Maximum SAR for this model and conditions under which it was recorded.				
EU/UK 10g SAR Limit (2.0 W/kg)	TB370FU	Body-worn (0mm)	WLAN, Bluetooth	1.48 W/kg
EU/UK 10g SAR Limit (4.0 W/kg)		Limb (0mm)	WLAN, Bluetooth	1.48 W/kg

- ⓘ The above information is for EU countries and UK. Please refer to the actual product for supported frequency bands in other countries.

During use, the actual SAR values for your device are usually well below the values stated. This is because, for purposes of system efficiency and to minimize interference on the network, the operating power of the device is automatically decreased when full power is not needed for the data connection. The lower the power output of the device, the lower its SAR value. If you are interested in further reducing your RF exposure, you can easily do so by limiting your usage or simply using a hands-free kit to keep the device away from the head and body.
