RE: 731 Confirmation Number: EA93291
Correspondence Reference Number: 7170

Dear Mr. Dichoso,

Regarding the First Access device FCC regulation limitations, we are trying to solve the problems which you pointed out and we would greatly appreciate if you would assist us in confirming some additional questions to those we asked yesterday:

1. (a) If we include a switch on the card that will cease its operation by the user, or (b) If the user will have to start the card operation by pushing this button, and subsequently transmission will cease automatically after several hours, will this solve the problem of the periodic operation?
2. If we decrease our field strength, will we stand within section 15.231(e).

All of this is based on the assumption that you received our declaration that we are sending only a recognition code as allowed in section 15.231(a). It is important to note that our application performs only recognition of the data transmission.

Thank you very much and Best Regards,

Amos
