Dear Mr. Dichoso,

Thank you for all the help you supplied trying to solve First Access' regulation problems.

We would like to have your opinion regarding First Access' product certification under section 15.231(e):

- 1) The product is the 430.92[MHz] band.
- 2) The product is under 4700 microvolt/meter.
- 3) The interval period is 10.3 seconds - the silence time is 10 seconds
- 4) The whole transmission time in one interval is no longer than 300 ms. Each transmission contains the Card ID (4 times with 4 peaks) so as to keep the silence to 10 seconds and the transmission time to 30 times less as required by section 15.231(e).

Kindly advise us of the following:

We are concerned that the problem of definition is due to our explanation of the process in English. I am sorry but we could not contact you at Friday. Is it possible that we could call you in order to clarify this issue? Can you please give me your phone number and the time that I should call?

Best Regards,

Amos
