

RC-03M product
Label Location
12/4/2012 MJM

The ability to add more information on the reader is simply not possible due to the fact that the label as it exists does not have room for more text as these can be installed in dark areas requiring larger print for the installer. Further, an additional label is not an option due to the fact that there is no room for another label. On one end we have only mounting screw access and on the other we have mounting screw access plus the tamper detection window which cannot be covered up.

Note: Label shown is for the RC-03 LF product as an example of label location on product only

On the left side the distance from the existing label to the left edge of the controller is 0.6" which includes the mounting hole. On the right side the distance from the right side of the tamper window edge to the right side of the controller is 1" which also includes the mounting hole. The largest open spot is between the tamper window right edge to the mounting hole which is 0.5".

I see no way to get another label applied.
