INTRODUCTION TO THE AUDIT PROFESSIONAL TIRE MANAGEMENT SYSTEM

1.1 **AUDIT** Professional Tire Management System Overview

The **AUDIT** Professional Tire Management System is a powerful, comprehensive, Windows-based software program combined with high tech electronic tire inspection tools, specifically designed for fleets and suppliers, to reduce operating costs by establishing and maintaining a professional tire management database of vehicles and associated tires.

The **AUDIT** System provides the means to survey the database tires to establish and record their current physical condition and to measure and record tread wear, using a **DATA AUDIT** hand held tool and a **TREAD AUDIT** electronic tread depth gauge. It also provides the means to check and record initial tire pressure and to implement any necessary inflation or deflation of the tire using an **AIR AUDIT** auto-inflate tool, remotely controlled by the hand held **DATA AUDIT** Tool. **AUDIT** also provides for the entering of tire pressure measurements made without the use of the **AIR AUDIT** Tool into the database.

In order to conduct a tire survey, the vehicle data is downloaded from the computer into the hand held **DATA AUDIT** Tool. After completion of the tire survey, the modified survey data is uploaded to the computer for review and appropriate action.

This User's Manual contains descriptions of the **AUDIT** Tire Survey Tools and accessories that enable downloading of vehicle data into the **DATA AUDIT** Tool, conducting of a tire survey, and the subsequent uploading of the audit survey data back into the computer. It also contains details of typical **DATA AUDIT** Tool screen displays that prompt and guide the user through the sequence of operations. A separate **AUDIT** Implementation Guide and Fleet Set-up Guide describing the **AUDIT** Professional Tire Management software program and its installation and use is available.

1.2 **AUDIT** Tire Survey Tools and Accessories Checklist.

ITEM	QTY	DESCRIPTION
1	1	DATA AUDIT Tool (including an installed DATA AUDIT Battery Pack)
2	1	TREDA AUDIT Tool
3	1	AIR AUDIT Tool
4	1	AUDIT BATTERY CHARGER/DOCKING Tool
5	2	DATA AUDIT Battery Pack (One already installed in the DATA AUDIT Tool)
6	2	AIR AUDIT Battery Pack
7	1	AC Power Cord Assembly
8	1	RS232 Interface Cable Assembly
9	1	AUDIT Air Hose
10	1	AIR AUDIT Input Hose
11	1	AIR AUDIT Output Quick-Connect Air Chuck

UNPACKING AND INSPECTION OF AUDIT TOOLS

2.1 Unpacking

Carefully unpack the AUDIT Tools and accessories to determine that all the items listed in the check off list in Section 1 are present.

2.2 Inspection

2.2.1 Carefully inspect all items to ensure that there is no obvious damage to any of the items received. Record and report any damage observed to International Marketing, Inc. via fax to 717-264-5483.

2.2.2 Check that the Battery Pack installed in the DATA **AUDIT** Tool is firmly seated. Press the ON/OFF button, hold it down until a screen display is seen.

2.2.3 Press the ENTER button and then the ON/OFF button to turn the DATA **AUDIT** Tool OFF. The screen display should extinguish.

2.2.4 Ensure that the DATA **AUDIT** Tool remains OFF when not in use, and has a battery pack installed, to ensure unnecessary drain on the internal back-up battery or the DATA **AUDIT** Battery Pack.

2.2.5 Install an AIR **AUDIT** Battery Pack into the AIR **AUDIT** Tool and press the Red ON/OFF button; the button should stay depressed and become back lit.

2.2.6 Press the ON/OFF button again. The back lighting should extinguish.

2.2.7 Ensure that the AIR **AUDIT** Tool remains OFF to ensure unnecessary drain on the AIR **AUDIT** Battery Pack.

2.3 Re-packing

2.3.1 Retain the packing boxes and packing materials in which the **AUDIT** equipment items were received.

2.3.2 If there is a need to return any items, return them in the boxes and packed in the packing materials in the manner in which they were received. All returns should be directed to:

Advanced Concepts Manufacturing, Inc.
325 Paul Avenue
St. Louis, MO 63135
Phone: 314-524-9870

AUDIT SYSTEM TOOLS AND ACCESSORIES

3.1 DATA AUDIT Tool

The DATA AUDIT Tool is a user friendly hand held unit designed to integrate with the AUDIT Professional Tire Management System software program, and with the other AUDIT System Tools and accessories, to provide the means to conduct a tire survey and audit on any selected set of up to 50 vehicles with up to 20 wheel positions each from the Tire Management software AUDIT database.

The DATA AUDIT Tool interfaces with the computer, in which the AUDIT database is installed, for downloading of vehicle data and uploading of AUDIT data. This is achieved by installing the DATA AUDIT Tool into the docking channel of the AUDIT Battery Charger/Docking Tool. This enables the DATA AUDIT Tool to interface with the computer via a serial port.

The DATA AUDIT Tool also interfaces with the TREAD AUDIT Tool, via a multi-wire cable connection, to measure tire tread depths.

The DATA AUDIT Tool also interfaces with the AIR AUDIT Tool, via a radio link, to make tire air pressure (psi) measurements and to perform tire inflation or deflation operations.

The DATA AUDIT Tool is powered by a DATA AUDIT Battery Pack, and has an ON/OFF button, which enables the DATA AUDIT Tool to be switched OFF, when not in use, to conserve DATA AUDIT Battery Pack power.

Operation of the DATA AUDIT Tool is controlled by means of a minimal number of keypad buttons, ergonomically sized, shaped and positioned for logical and easy operation. These buttons are conveniently situated on the front of the handle portion of the DATA AUDIT Tool.

Operational prompts, selections and directives, which guide the operator through a tire data audit, are presented on a series of progressive screens on a square liquid crystal graphic display located in the upper portion of the DATA AUDIT Tool. This display has contrast adjustment via + and – contrast buttons located at the top left of DATA AUDIT Tool for optimizing legibility of the display.

The downloaded vehicle data includes the vehicle identification numbers (Ids) which, with corresponding tire location diagrams, are displayed on the graphic screen. During the tire data audit each tire position to be audited is indicated, in turn, by a blinking ON and OFF of the wheel position graphic on the vehicle layout. As an audit on a tire is completed the next tire to be audited is indicated by the blinking of its wheel position on the graphic vehicle layout. Spare tires are also represented graphically. When the last vehicle wheel position tire has been audited, the spare tire graphics will blink ON and OFF in turn, as they are audited. Tires can be re-inspected, skipped or the inspection sequence changed by scrolling via the arrow keys.

3.2 TREAD AUDIT Tool

The **TREAD AUDIT** Tool is a hand held assembly with a sliding probe which is designed for insertion into tire tread grooves for the purpose of determining the tread depth at the point of measurement.

The **AUDIT** System is programmed for the user to take four tread depth measurements, each at a different point on the tire, for each tire.

To obtain a zero reference for tread depth measurements, the **TREAD AUDIT** Tool is placed on a flat surface to depress the probe so that it completely enters the body of the **TREAD AUDIT** Tool. At that point, the **RECORD** button on one side of the **TREAD AUDIT** assembly or the **ENTER** key on the **DATA AUDIT** is pressed to record the zero reference in the hand held **DATA AUDIT** Tool.

The interface between the **DATA AUDIT** Tool and the **TREAD AUDIT** Tool is via a multi-wire cable attached to the **TREAD AUDIT** Tool. A multi-pin connector on the end of this cable plugs into a matching multi-pin connector mounted on the top end of the **DATA AUDIT** Tool.

The **DATA AUDIT** Tool provides power to the **TREAD AUDIT** Tool via the multi-wire cable connection, and signals conveying the tread depth measurements are passed from the **TREAD AUDIT** Tool to the **DATA AUDIT** Tool via the multi-wire cable connection.

3.3 AIR AUDIT Tool

The **AIR AUDIT** Tool is a stand alone assembly which contains a pneumatic valve assembly, and the means to connect a local compressed air supply hose to the **INPUT** (**AIR IN**) of the **AIR AUDIT** Tool, and to connect an air hose to the **AIR AUDIT** Tool **OUTPUT** (**AIR OUT**) for connection to a tire being audited.

The **AIR AUDIT** Tool also contains circuitry that provides for radio reception of command signals from the hand held **DATA AUDIT** Tool, to operate the pneumatic valves, and for radio transmission of operational confirmation and measurement signals to the **DATA AUDIT** Tool.

The **AIR AUDIT** Tool responds to the commands from the **DATA AUDIT** Tool to record initial tire inflation pressure of a tire being audited. It also responds to commands to inflate or deflate the tire to reach a recommended psi as directed from the **DATA AUDIT** Tool. This air pressure parameter originates at the **AUDIT Database**. The **AIR AUDIT** will also confirm final pressure readings.

The **AIR AUDIT** Tool is powered by an **AIR AUDIT** Tool Battery Pack, and has a backlit ON/OFF button, which enables the **AIR AUDIT** Tool to be switched OFF, when not in use, to conserve **AIR AUDIT** Battery Pack power. The radio signals between the **DATA AUDIT** and **AIR AUDIT** Tools contain a pre-set equipment identification code that is unique to the **DATA AUDIT** and **AIR AUDIT** Tool pair that are part of an **AUDIT** System. This ensures that in a multi **AUDIT** System environment only the **DATA AUDIT** and **AIR AUDIT** Tools that belong to the same **AUDIT** System will be able to communicate with each other. Interference between different **AUDIT** Systems is thereby prevented.

Note: The red "Reset" button on the **DATA AUDIT** can be used to temporarily disable the **AIR AUDIT** if needed.

3.4 **AUDIT BATTERY CHARGER/DOCKING Tool**

The **AUDIT** Battery Charger/Docking Tool is a flat-surface mounting assembly, which provides a dual function. It provides docking positions and circuitry for recharging two of each type of **AUDIT** Battery Packs simultaneously, and a docking channel and circuitry to provide a link for the **DATA AUDIT** Tool to interface with the computer in which the **AUDIT** database is installed.

The **AUDIT** Battery Charger/Docking Tool is designed to be powered from a standard 100-125 volt 60Hz outlet. The accessory AC Power Cord Assembly (Item 9) is provided for this purpose. A replaceable miniature 250 Volts 250 milliampere (mA) rated fuse is installed in the AC input line connector assembly.

3.4.1 **AUDIT Battery Charger Section**

The **AUDIT** Battery Charger Section provides docking positions and associated circuitry for recharging two **DATA AUDIT** Battery Packs and two **AIR AUDIT** Battery Packs, simultaneously.

Each battery pack docking position is shaped to receive the appropriate **AUDIT** Battery Pack in the correct orientation.

An installed battery pack that has less than full charge will cause an associated Light Emitting Diode (LED) to light. When the battery becomes fully charged the LED will extinguish. Each battery pack charging position has an associated LED.

3.4.2 **DATA AUDIT Tool Docking Section**

The **AUDIT** Tool Docking Station provides a docking channel that links the **DATA AUDIT** Tool to the computer in which the **AUDIT** database is installed. It connects to the **DATA AUDIT** Tool via an infrared link. It connects to the serial port of the computer via a cable (Item 8) provided with the **AUDIT** system.

3.5 **AUDIT Battery Packs**

The DATA **AUDIT** Battery Pack and the AIR **AUDIT** Battery Pack are each designed to fit into the housing of their respective **AUDIT** Tool.

3.6 **AC Power Cord Assembly**

The AC power cord assembly is 8 feet long. It has a standard North American 100-125 volt AC polarized 3-pin plug at one end and a miniature 3-socket connector at the other end. The connector is designed to be inserted into the housing of the fused mating connector on the **AUDIT** Battery Charger/Docking Tool, and it is shaped to provide a polarized connection. The cable assembly is rated at 125 volts, 10 Amps AC.

3.7 **RS 232 Interface Cable Assembly**

The RS 232 interface cable assembly is approximately 6 feet long. It has a standard 9-pin socket connector at each end. It is provided to interconnect the RS232 connector on the **AUDIT** Battery Charger/Docking Tool to an RS 232 connector on the **AUDIT** Database Computer.

3.8 **AUDIT AIR HOSE**

The air hose supplied is 10 feet long. It is provided for connection between the AIR **AUDIT** Tool AIR OUT port and the valve of the tire being audited, via an appropriate adapter (not supplied).

The air hose has a 3/8-inch inside diameter and is rated at 350 psi.

INSTALLING AND REMOVING AUDIT BATTERY PACKS

4.1 DATA AUDIT Tool Battery Pack

4.1.1 Installation

The DATA **AUDIT** Battery Pack is installed by insertion into the handle portion of the DATA **AUDIT** Tool. The DATA **AUDIT** Tool housing internal section complements the “D” cross-section shape of the battery pack, which should be orientated to fit into the housing and then firmly pushed into the housing as far as it will go. A “click” sound as the battery pack is fully inserted indicates that the battery pack has been “locked” into position by engagement of the spring locking tongue of the battery pack housing with the complementary indentation in the DATA **AUDIT** housing.

4.1.2 Removal

The battery pack should be gripped firmly, the locking tongue depressed, and the battery pack pulled straight out of the DATA **AUDIT** housing keeping it parallel with the sides of the DATA **AUDIT** housing.

4.2 AIR AUDIT Tool Battery Pack

4.2.1 Installation

The AIR **AUDIT** Battery Pack is installed into the top face of the AIR **AUDIT** Tool. The AIR **AUDIT** Battery Pack has a rectangular cross-section and the AIR **AUDIT** Tool has a complementary rectangular depression in its top face. Position the AIR **AUDIT** Tool so that this top face is uppermost. The AIR **AUDIT** Tool should then be held firmly in this position. The battery assembly should be positioned at an angle, aligned with the complementary shape of the depression in the AIR **AUDIT** housing. The short side of the battery assembly opposite to the end with the locking tongue should be inserted and pressed against the short side of the AIR **AUDIT** rectangular depression, which is opposite the locking end. The battery pack end in contact with the AIR **AUDIT** housing should then be held tightly against the housing as if this formed a hinge and the free end of the battery assembly should then be lowered into the AIR **AUDIT** housing until the upper face of the battery pack becomes flush with the AIR **AUDIT** housing face. A “click” at this point will indicate that the battery pack is “locked” into position.

4.2.2 Removal

Position the AIR **AUDIT** Tool so that its bottom face is uppermost. Hold it firmly in this position. Insert a finger into the depression between the two housings at the locking end of the battery pack. Curl this finger to get a grip under the battery pack housing locking tongue. Firmly pull backward and upward against the locking end of the battery pack to hinge it out of the AIR **AUDIT** Tool.

CONDUCTING AN AUDIT DATABASE DOWNLOAD INTO THE DATA AUDIT TOOL

Take the DATA AUDIT Tool to the AUDIT Battery Charger/Docking Tool and proceed as follows:

- 6.1 Setting Date and Time on the DATA AUDIT Tool screen.
- 6.1.1 Press the ON/OFF button on the DATA AUDIT Tool until the following Introductory screen display appears. Press the + and - buttons to adjust the screen contrast to provide the best viewing contrast with the prevailing lighting conditions.

Introductory Screen

IMI/BUDINI
DATA AUDIT
INSPECTION
TOOL

Copyright 1998 ACM
Version 0.2

Press ENTER
to Continue

- 6.1.2 Press the ENTER button. The below-left Date and Time Screen will appear.

Date and Time Screen

Are the date and time
Correct ?

July 14, 1998

10:45 P.M.

-> Yes No

Select option, then
press ENTER

Correct the Date and Time Screen

Use arrow keys to
enter date and time

July 14, 1998

10:45 P.M.

(Month)

Press ENTER
to accept date

6.1.3 If the Date and Time are correct Press ENTER. The following Zero Tread Depth Probe Screen will appear. Continue to Step 6.2.

6.1.4 If the Date and/or Time are incorrect then proceed as follows:-

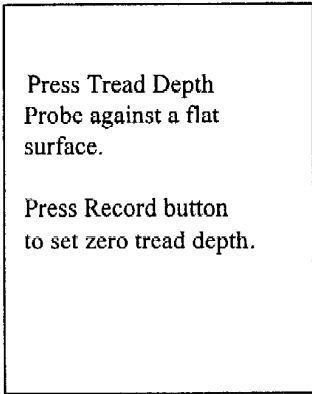

Select NO by pressing on the right-pointing arrow button and then pressing ENTER. The above-right Correct the Date and Time Screen will appear.

Follow the screen prompts and use the right-pointing arrow button to correct the date and/or time as necessary.

Press ENTER when date and/or time have been corrected.

The following Zero Tread Depth Probe Screen will appear.

Zero Tread Depth Probe Screen

A rectangular box representing a screen with two lines of text.

Press Tread Depth
Probe against a flat
surface.

Press Record button
to set zero tread depth.

6.2 Installing the DATA **AUDIT** Tool into the docking channel of the **AUDIT** Battery Charger/Docking Tool.

NOTE: Before installing the DATA **AUDIT** Tool into the **AUDIT** Battery Charger/Docking Tool, ensure that the **AUDIT** Battery Charger/Docking Tool is connected to a live standard 100-125 volt 60Hz outlet. Also ensure that the RS 232 cable is connected between the **AUDIT** Battery Charger/Docking Tool and the computer Com Port.

Also ensure that the required **AUDIT** database is in the computer and is ready to be downloaded into the DATA **AUDIT** Tool.

6.2.1 Place the DATA **AUDIT** Tool, with the screen side uppermost, into the docking channel in the **AUDIT** Battery Charger/Docking Tool.

6.3 Downloading the **AUDIT** Tire Database

- 6.3.1 Press ENTER. The following typical Vehicle Menu screen will appear if an **AUDIT** Tire Database is already loaded into the DATA **AUDIT** Tool.

However if there is no **AUDIT** Tire Database already loaded into the DATA **AUDIT** Tool, then this screen will appear but it will have no vehicle Ids and no vehicle and spare tire graphics.

Vehicle Menu Screen (typical)

```
Select Vehicle, then
press ENTER

→ 1000      |--|-----|
    1001      |
    1002      |
    1003      |
    1004      |
    1005      |
    2001      |--|-----|
    2002      |--|-----|
    3000
    3001      |||
```

- 6.3.2 Press the MENU button on the DATA **AUDIT** Tool. The following Select Option screen, on the left, will appear.

Select "Get data from PC", using the down arrow button, as shown to the right. Press the ENTER button.

Select Option Screen

```
Select Option, then
Press ENTER

--→ Go to Vehicle Menu

    Get data from PC

    Send data to PC

    Change the date
```

Select Option Screen with
"Get data from PC" selected

```
Select Option, then
Press ENTER

    Go to Vehicle Menu

--→ Get data from PC

    Send data to PC

    Change the date
```

- 6.3.3 If the **DATA AUDIT** Tool contains **AUDIT** data that has not been uploaded to the computer, the Previous Measurement screen will appear as shown below right.

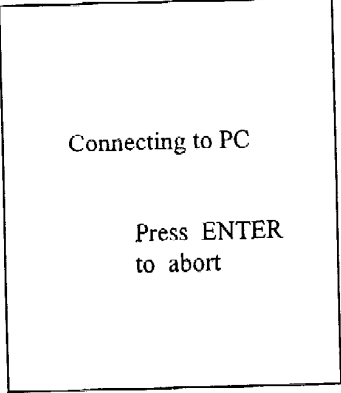

If you do not want to lose this data, select **NO** and press the **ENTER** button and you will be returned to the Menu screen. Refer to Section 9 for instructions on how to upload **AUDIT** data.

If you want to delete the previous data and continue with the download, select **YES** and press the **ENTER** button.

NOTE: If you select **YES** and press the **ENTER** button, previous data that was not uploaded will be lost and cannot be retrieved.

- 6.3.4 If you wish to proceed with the download, select **Yes**. The following Connecting to PC screen, on the left, will appear.

Select option, then
Press ENTER

- 6.3.5 When the connection between the computer and the **DATA AUDIT** Tool is established the following Connected screen will appear.

Connected Screen

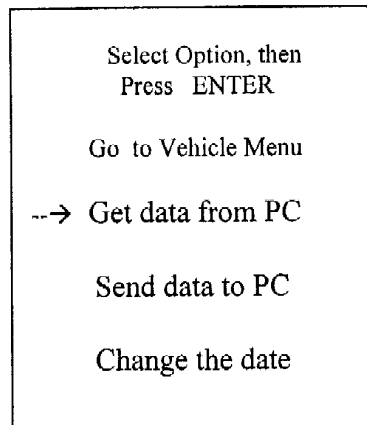

Connected

Downloading Data

Press ENTER
to abort

- 6.3.6 Upon completion of the download the Select Option Screen with “Get data from PC” selected will reappear, as follows.

Select Option Screen (with “Get data from PC” selected)

A screenshot of a menu screen titled "Select Option, then Press ENTER". The menu lists five options: "Go to Vehicle Menu", "--> Get data from PC", "Send data to PC", and "Change the date". The option "--> Get data from PC" is highlighted with a double arrow.

Select Option, then
Press ENTER

Go to Vehicle Menu

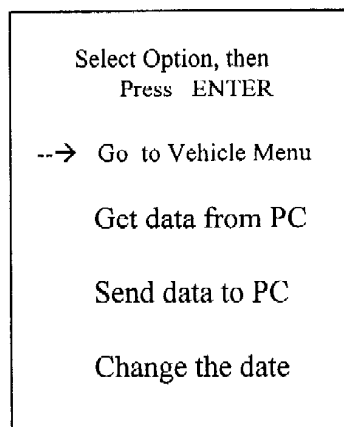

--> Get data from PC

Send data to PC

Change the date

- 6.3.7 Move the arrow to select “Go to Vehicle Menu”, as shown below.

Select Option Screen with “Go to Vehicle Menu” selected

A screenshot of a menu screen titled "Select Option, then Press ENTER". The menu lists five options: "--> Go to Vehicle Menu", "Get data from PC", "Send data to PC", and "Change the date". The option "--> Go to Vehicle Menu" is highlighted with a double arrow.

Select Option, then
Press ENTER

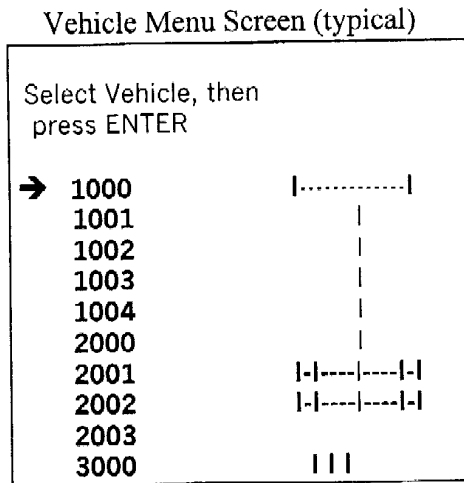

--> Go to Vehicle Menu

Get data from PC

Send data to PC

Change the date

- 6.3.8 Press ENTER. The Vehicle Menu screen will reappear but it will now have the vehicle ID list and vehicle and spare tire graphics of the newly downloaded vehicle data, as shown in the following typical Vehicle Menu screen

- 6.3.9 Remove the DATA **AUDIT** Tool from the docking channel and verify that the download is complete and correct, as follows.

6.4 Verifying the Download of the **AUDIT** Database into the DATA **AUDIT** Tool

- 6.4.1 Scan through the vehicle IDs to determine if all the required vehicles have been correctly downloaded into the DATA **AUDIT** Tool.

Do not make any database changes while making this check.

- 6.4.2 If it is determined that the download was successful, press the ON/OFF button to switch OFF the DATA **AUDIT** Tool.
- 6.4.3 Refer to Sections 7.0 and 8.0 to prepare for and to conduct an audit on the downloaded **AUDIT** Tire Database

SETTING UP THE AUDIT SYSTEM TOOLS TO PERFORM A TIRE AUDIT

7.1 Connecting the TREAD AUDIT Tool to the DATA AUDIT Tool

Connect the TREAD AUDIT Tool cable connector to the DATA AUDIT Tool mating connector, ensuring that the red dot on the TREAD AUDIT Tool connector is in line with the red dot on the DATA AUDIT Tool connector.

7.2 Connecting the AIR AUDIT Tool to the local compressed air supply.

Connect a Quick Connect air coupler with the appropriate quick connect end to suit the local compressed air supply hose, and with a male ¼ inch NPT end, to the AIR IN port of the AIR AUDIT Tool using the appropriate sized wrench. Do not exceed 150 psi input. **To ensure that the AIR AUDIT Tool external and internal bulkhead nuts do not rotate while connecting the air supply hose; hold the external bulkhead nut still using a ¾ inch wrench.**

7.3 Connecting the output quick connect coupler on the AIR AUDIT Tool with the output air hose.

Connect the 10-foot air hose supplied as part of the AUDIT System to the AIR OUT port of the AIR AUDIT Tool. Use a 7/16 inch wrench if a yellow air hose has been supplied and use a 9/16 wrench if a red air hose has been supplied.

To ensure that the AIR AUDIT Tool external and internal bulkhead nuts do not rotate while connecting the air supply hose, hold the external bulkhead nut still using a ¾ inch wrench.

The AUDIT System is not supplied with connectors for connecting the air supply hose to the AIR AUDIT. **The user must provide the appropriate connector for connection of the air supply hose to the AIR AUDIT.**

If any tire or tires to be audited are to have their air pressure adjusted manually, a hand held or other type of manually operated tire gauge will be needed. If all tires are to have their air pressure adjusted manually, there will be no need for the AIR AUDIT Tool or the AUDIT AIR HOSE.

In either case, the user must provide the appropriate adapter(s) for connection between the user's compressed air supply hose and the valve stems of all the tires to be audited.

7.3.1 Verify that the line pressure from the compressed air supply is in the range of 130 psi to 150 psi.

7.3.2 Refer to Section 8.0 for a description of the Tire Auditing Procedure, which covers the use of the AIR AUDIT Tool and also the use of manual tire pressure measurements.

PERFORMING A TIRE AUDIT.

Prepare the AUDIT Tools as described in Section 7. Then continue with the instructions listed below.

8.1 Setting the Date and Time on the DATA **AUDIT** Tool Screen.

- 8.1.1 Press the ON/OFF button on the DATA **AUDIT** Tool until the following typical introductory screen appears. Press the + and - buttons to adjust the screen contrast to provide the best viewing contrast with the prevailing lighting conditions.

Introductory Screen (typical)

July 14, 1998

10:45 P.M.

(Month)

Press ENTER
to accept date

- 8.1.3 If the Date and Time are correct Press ENTER. The following Zero Tread Depth Probe Screen will appear.
- 8.1.4 If the Date and/or Time are incorrect select NO by pressing on the right-pointing arrow button and then pressing ENTER. The above-right Correct the Date and Time Screen will appear. Follow the prompts and use the right-pointing arrow button to correct the date and/or time as necessary.

- 8.1.5 Press ENTER when date and/or time have been corrected. (or if no correction is needed). The following Zero Tread Depth Probe Screen will appear.

Zero Tread Depth Probe Screen

Press Tread Depth
Probe against a flat
surface.

Press Record button
to set zero tread depth.

8.2 Conducting the **AUDIT** Database Audit Procedure

- 8.2.1 Press the **TREAD AUDIT** Tool probe against a flat surface until the probe tip is flush with the flat face of the **TREAD AUDIT** Tool. Hold the **TREAD AUDIT** Tool firmly in this position and press the Record button. The following typical Vehicle Menu screen will appear.

Vehicle Menu Screen (typical)

Select Vehicle, then press ENTER		
→ 1000	1-----1	
1001	1	
1002	1	
1000	1	
1004	1	
2000	1	
2001	11 1 11	
2002	11-----11	
3000		
3001	111	

The initial Vehicle Menu screen has a listing of up to ten vehicle Identification Numbers (Ids). Each vehicle may be selected by using the up or down-pointing arrow buttons on the **DATA AUDIT** Tool to move the arrow at the left of the screen to point at the vehicle Id.

Additional screens, containing the remainder of the **AUDIT** database being audited, may be accessed by scrolling the down arrow off the bottom of each screen in turn.

Associated with each vehicle Id is a graphical representation of the corresponding vehicle showing all the wheel positions. Any spare tires associated with the selected vehicle are also graphically represented below the vehicle graphic.

- 8.2.2 Use the down-arrow button on the DATA **AUDIT** Tool to move the arrow on the screen to select the vehicle whose tires you wish to audit. Then press ENTER. The following typical Inspect Vehicle screen will appear.

Inspect Vehicle Screen (typical)

A rectangular screen with a black border. The text inside is centered and reads: "Inspect Vehicle" followed by "1000" on the next line. Below that is a right-pointing arrow followed by "Yes" and "No" on the same line. At the bottom, it says "Select option then, press ENTER".

- 8.2.3 Confirm that the vehicle Id number shown on this screen corresponds to the vehicle that you intended to select. If it does press ENTER and the following Enter Odometer Reading screen will appear.
- 8.2.4 If the vehicle Id number does not correspond to the vehicle you intended to select, use the right-pointing arrow button on the DATA **AUDIT** Tool to select NO and press ENTER. You will be returned to the Vehicle Menu screen to allow you to re-select a vehicle. Do so and press ENTER. The Inspect Vehicle screen will reappear, showing the reselected vehicle Id. Press ENTER. The following Enter Odometer Reading screen, on the left, will appear.

Enter Odometer Reading Screen

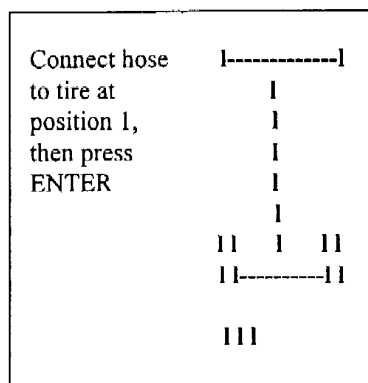

A rectangular screen with a black border. The text inside is centered and reads: "Use arrow keys to enter current odometer reading" followed by "0000000 miles" on the next line. Below that is a caret (^) symbol. At the bottom, it says "Press ENTER to continue".

Enter Odometer Reading Screen (typical)

A rectangular screen with a black border. The text inside is centered and reads: "Use arrow keys to enter current odometer reading" followed by "0123456 miles" on the next line. Below that is a caret (^) symbol. At the bottom, it says "Press ENTER to continue".

- 8.2.5 Note the selected vehicle odometer reading and enter it onto the screen, moving from left to right, by using the right pointing arrow button on the DATA **AUDIT** Tool to move to each odometer number position in turn. Use the up-pointing and down-pointing arrows to increase or decrease the number entered at each position. The left-pointing arrow may be used to backtrack for corrections or adjustments if necessary.
- 8.2.6 Upon completion of the odometer reading entry, as shown in the above-right screen, press ENTER. The following typical Connect Hose to Tire screen will appear.

Connect Hose to Tire Screen (typical)

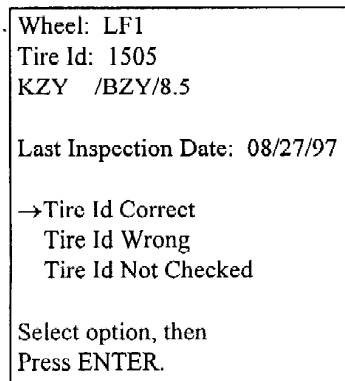

NOTE that the tire position 1 is blinking off and on.

The tire to be audited will be indicated by the blinking off and on of the graphic representing the wheel position.

- 8.2.7 Connect the hose assembly from the output port of the AIR **AUDIT** Tool to the tire at the wheel position that is blinking off and on. Make sure that the hose connection is secure and is not leaking air from the tire.
- 8.2.8 Switch the AIR **AUDIT** Tool ON by pushing the red button. This button will stay depressed and back-lit when the AIR **AUDIT** Tool is ON. Check the hose connections to ensure that there is no leaking air. Readjust the hose connections, if necessary, to stop any leaks. Then press ENTER. The following typical Wheel/Tire Id screen will appear.

Tire Id Screen (typical)

- 8.2.9 Check the tire being audited to determine if the wheel position and the actual tire Id correspond to those shown on the screen.
- 8.2.10 Select the appropriate option (Correct, Wrong or Not checked) by using the down-pointing arrow button and press ENTER. The following typical Air Pressure Adjustment screen will appear.

Air Pressure Adjustment Screen (typical)

Recommended Air Pressure:	100 psi
→Adjust tire to recommended air pressure.	
Skip tire pressure Adjustment.	
Select option, then Press ENTER.	

- 8.2.11 Press ENTER. The AIR **AUDIT** Tool will begin to measure the tire current air pressure and the following Waiting for Actual Air Pressure screen, on the bottom left, will appear.

Waiting for Actual Air Pressure Screen

Waiting for actual air pressure from automatic inflation unit
--

Actual Tire Pressure Screen (typical)

Actual tire pressure was # psi
Press ENTER to continue

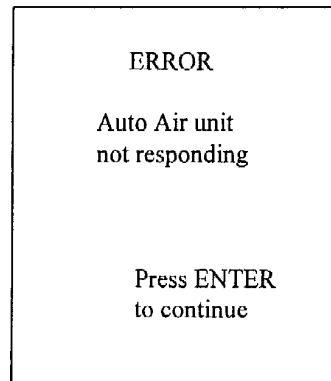

- 8.2.12 After a short time the above-right Actual Tire Pressure screen will appear automatically, with the tire pressure measured by the AIR **AUDIT** Tool in place of the “#” symbol. When this occurs, press ENTER and continue at Step 8.2.13.

NOTE 1: The AIR **AUDIT** Tool will not attempt to adjust the inflation of tires that are grossly over-inflated or under-inflated. See section 8.2.28.

NOTE 2: If, after about a minute, the following **AIR AUDIT ERROR** screen appears, it indicates that the radio connection between the **DATA AUDIT** and **AIR AUDIT** Tools is not operating correctly.

This may be due to the fact that the **AIR AUDIT** Tool is not switched ON, the reset button may have been depressed, or the distance between the **DATA AUDIT** and **AIR AUDIT** Tools may be too great, or it may be due to the use of **DATA AUDIT** and **AIR AUDIT** Tools with differently programmed identification codes.

AIR AUDIT ERROR screen

NOTE 3: If for any reason you need to halt a tire air pressure adjustment process, such as for example a bulge developing in the tire wall, press the **RESET** button. This will halt the tire air pressure adjustment immediately.

NOTE 4: Initial and final tire air pressure measurements, may be made with a hand held tire air pressure gauge or other type of manual air pressure gauge, instead of with an **AIR AUDIT** Tool, and the measurements made with the manual gauge may be recorded into the **DATA AUDIT** Tool database manually, as described in Step 8.3.

This manual operating procedure for adjusting the tire air pressure may be initiated by pressing **ENTER** when the above **ERROR** screen is displayed. It may also be initiated by selecting "Skip tire pressure adjustment" on the typical Air Pressure Adjustment Screen shown at Step 8.2.10.

8.2.13 After the Actual Tire Pressure screen appears with a valid tire air pressure measurement, and **ENTER** is pressed, the following Select Tire Status screen will appear. This screen, together with a following Add, Erase or Complete screen, will enable tire inspection status of tires being audited to be entered into **AUDIT** database.

NOTE: The AIR **AUDIT** Tool will continue to adjust the tire air pressure while the tire auditing inspections and entries are carried out. At the completion of the tire audit the typical Air Pressure Adjustment Completion screen shown at Step 8.2.28 will appear to confirm the completion of the tire pressure adjustment process.

Select Tire Status Screen

Inspect the tire and
select up to 4 status
descriptions

Status description
from last inspection

101 Large Side Wall
Damage

Press ENTER
to continue

NOTE: The most serious of the status descriptions from the previous audit of the tire will appear as a "Status description from last inspection". In this typical example the status "101 Large Side Wall Damage" is shown as being previously selected.

8.2.14 Press ENTER. The following typical Inspection Status Menu Screen will appear.

By scanning down through the options, using the down arrow button, a second typical Inspection Status Menu Screen 2, with additional typical damage descriptions, may be accessed.

Inspection Status Menu Screen 1 (typical)

Select description
then press ENTER

→ 302 Inspected
Normal

100 Imminent Danger
- Scrap

101 Large Side Wall Damage

102 Large Crown
Damage

103 Large Bead
Damage

Inspection Status Menu Screen 2 (typical)

Select description
then press ENTER

104 Ran Flat

105 Damaged Wheel

106 Immediate
Removal

107 Serious Vehicle
Problem

200 Warning Tire -
Scrap

8.2.15 Thoroughly inspect the tire and note all conditions that correspond to a listed option on the above screens.

NOTE: A total of four tire conditions can be entered into the DATA **AUDIT** for each tire surveyed.

8.2.16 Use the Up and Down arrow buttons to select the first applicable condition you wish to report. As an example it will be assumed, that “102 Large Crown Damage” is selected as the first condition to be entered.

8.2.17 Press ENTER. The following Add, Erase or Complete screen will appear.

Add, Erase or Complete Screen

102 Large Crown
Damage

Add Erase Complete
^
Select option, then
Press ENTER

NOTE that “102 Large Crown Damage” is entered, and that the previous “101 Large Side Wall Damage” does not appear. This will have to be reentered if the tire has not been replaced and you agree with the damage description.

8.2.18 With the arrow pointing to “Add” press ENTER to return to the Select Description (of inspection status) Screen 1. This screen will reappear with the selection arrow pointing to the first choice (302 Inspected Normal).

8.2.19 Move the arrow to your next condition description. (103 Large Bead Damage will be assumed to be your choice) and press ENTER.

The Add, Erase or Complete Screen will reappear with both of your selections listed, as shown in the following screen, to the left.

Add, Erase or Complete Screen

102 Large Crown
Damage
103 Large Bead
Damage

Add Erase Complete
^
Select option, then
Press ENTER

Add, Erase or Complete Screen

102 Large Crown
Damage
103 Large Bead
Damage

Add Erase Complete
^
Select option, then
Press ENTER

8.2.20 To enter these two choices into the **AUDIT** tire database, move the arrow on the screen so that it points to "Complete" as shown in the screen to the right above, and then press ENTER.

8.2.21 However if you decide to delete one of the description choices that you have made, move the arrow to "Erase" and press ENTER. The following Go Back screen will appear.

Go Back Screen

→ 102 Large Crown
Damage
103 Large Bead
Damage

Go Back

Select option, then
Press ENTER

8.2.22 Move the horizontal arrow to point at the entry you wish to remove. It will be assumed, for this example, that you wish to remove "102 Large Crown Damage". Press ENTER. You will be returned to the Add, Erase or Complete Screen. The "102 Large Crown Damage" is deleted, while "103 Large Bead Damage" remains, as shown below.

Add, Erase or Complete Screen

103 Large Bead
Damage

Add Erase Complete
^

Select option, then
Press ENTER

Add, Erase or Complete Screen

103 Large Bead
Damage

Add Erase Complete
^

Select option, then
Press ENTER

8.2.23 If this is the only entry you wish to make, move the arrow to point at “Complete” as at right above, and press ENTER. The following Tread Depth screen will appear.

Tread Depth Groove Screen

```
Measure tread depth
At groove 1.

→Tread Groove 1
---- 1/32 inch
Tread Groove 2
---- 1/32 inch
Tread Groove 3
---- 1/32 inch
Tread Groove 4
---- 1/32 inch

End
```

8.2.24 Press the **TREAD AUDIT** Tool against the tread of the tire under test, in four different tread grooves across the width of the tire, so that the probe is pressed into the body of the **TREAD AUDIT** Tool, as it contacts the bottom of each groove in turn.

When the **TREAD AUDIT** Tool probe is bottomed in the first tire groove, press the **RECORD** button on the side of the **TREAD AUDIT** Tool.

This will cause the depth of the tire tread at that point to be entered onto the Tread Depth Groove Screen in the Tread Groove 1 position. The measured value will replace the dotted line, as shown in the following screen. The number entered is the number of thirty seconds of an inch of tread depth.

Repeat this measuring process for each of the four test positions in turn. The measured groove depths will be entered onto the screen sequentially as indicated in the following four typical screens.

NOTE: The **ENTER** button on the **DATA AUDIT** Tool may always be used in place of the **RECORD** button on the **TREAD AUDIT** Tool if the operator finds it more convenient.

Tread Depth Groove Screen 1 (typical)

```

Measure tread depth
at groove 1.

Tread Groove 1
15.6 1/32 inch
→ Tread Groove 2
---- 1/32 inch
Tread Groove 3
---- 1/32 inch
Tread Groove 4
---- 1/32 inch
End
    
```

Tread Depth Groove Screen 2 (typical)

```

Measure tread depth
at groove 1.

Tread Groove 1
15.6 1/32 inch
Tread Groove 2
14.3 1/32 inch
→ Tread Groove 3
---- 1/32 inch
Tread Groove 4
---- 1/32 inch
End
    
```

Tread Depth Groove Screen 3 (typical)

```

Measure tread depth
at groove 1.

Tread Groove 1
15.6 1/32 inch
Tread Groove 2
14.3 1/32 inch
Tread Groove 3
15.7 1/32 inch
→ Tread Groove 4
---- 1/32 inch
End
    
```

Tread Depth Groove Screen 4 (typical)

```

Measure tread depth
at groove 1.

Tread Groove 1
15.6 1/32 inch
Tread Groove 2
14.3 1/32 inch
Tread Groove 3
15.7 1/32 inch
Tread Groove 4
15.9 1/32 inch
→ End
    
```

8.2.25 Press ENTER. The following typical Tread Depth Measurements Summary screen will appear.

Tread Depth Measurements Summary Screen (typical)

```

Tread depth at last inspection
16 1/32 inch
Projected tread depth
0 1/32 inch
Average tread depth
15 1/32 inch

→ Continue
Go Back

Select option, then
press RECORD
    
```

- 8.2.26 If you wish to redo the tread depth measurements move the arrow to select “Go Back” and press the RECORD button on the TREAD AUDIT Tool. The Tread Depth Groove Screen 4 will reappear so that new measurements may be made. To re-measure any tread groove, use the arrow keys to select that groove and use the TREAD AUDIT Tool to measure the tread depth as in section 8.2.24. This may be repeated until you are satisfied that all measurements are correct. To accept the displayed tread measurements, select END and press the RECORD button on the TREAD AUDIT Tool.

Tread Depth Groove Screen 4 (typical)

Measure tread depth at groove 1.
Tread Groove 1 15.6 1/32 inch
Tread Groove 2 14.3 1/32 inch
Tread Groove 3 15.7 1/32 inch
Tread Groove 4 15.9 1/32 inch
→ End

- 8.2.27 Press ENTER. The Tread Depth Measurements Summary screen will reappear, but with different calculated values.
- 8.2.28 If no changes are to be made press the RECORD button while “Continue” is selected on The Tread Depth Measurements Summary screen.

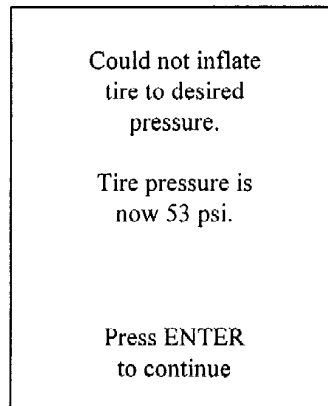

The following typical Air Pressure Adjustment Completion screen, confirming completion of the tire air pressure adjustment by the AIR AUDIT unit will appear.

Air Pressure Adjustment Completion Screen (typical)

Tire Inflation adjusted to 100 psi
Press ENTER to continue

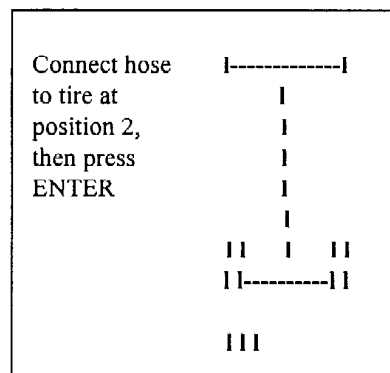

If the AIR **AUDIT** Tool could not adjust the inflation, a screen like the following will be displayed. Problems that could prevent an inflation adjustment include compressor pressure that is too high or too low, initial tire pressure that is too high or too low, or a leak or blockage in the air connections.

Could Not Inflate Screen

8.2.29 Press ENTER. The following typical Connect Hose to Tire Screen will appear. The next tire to be audited will be indicated by its wheel graphic flashing off and on.

Connect Hose to Tire Screen (typical)

NOTE that the tire position 2 is now blinking off and on.

8.2.30 Repeat the tire auditing process for each tire in turn by repeating the procedure from Step 8.2.7 through Step 8.2.31 for each tire of the vehicle being audited.

NOTE: To end a vehicle audit before all tires have been audited, simply use the arrow keys to scroll off the vehicle. For example, if tire 2 is selected, pressing the left arrow key will skip to step 8.2.31.

- 8.2.31 When the last tire of a vehicle has been audited, pressing ENTER will cause the following Continue/Exit Inspection screen to appear.

Continue/Exit Inspection Screen (typical)

```

→ Continue Inspection
  Exit Inspection

Use arrow keys to
select option, then
press ENTER.

```

- 8.2.32 Selecting "Continue Inspection" will return you to the typical "Connect Hose" screen of the last tire that you audited, as at left below. This will allow you to completely re-audit this tire. Selecting "Exit Inspection" will cause the typical Vehicle Menu screen, as at right below, to appear.

Connect Hose to Tire Screen (typical)

```

Connect hose      1-----1
to tire at       1
position 13,     1
then press       1
ENTER           1
               11  1  11
               11-----11
               111

```

Vehicle Menu Screen (typical)

```

Select Vehicle, then
press ENTER
→1000      11-----11
1001       1
1002       1
1000       1
1004       1
2000       1
2001      11  1  11
2002      11-----11
3000
3001      111

```

You will then be in a position to select the next vehicle to be audited.

- 8.2.33 However if this vehicle is some considerable distance from the vehicle you have just audited, you should exit from the audit process by pressing the ON/OFF button on the DATA **AUDIT** Tool, switching OFF the AIR **AUDIT** Tool and disconnecting all the auditing setup air hose connections. You should then take all the **AUDIT** Tools and accessories to the next vehicle to be audited and set up the auditing arrangement as described in Section 7.0.

NOTE: If you re-select a vehicle that you have already audited completely, and then press ENTER, the following typical Vehicle Was Already Inspected screen will appear.

Vehicle Was Already Inspected Screen

This vehicle was
already inspected.

New inspection data
will replace old data.

Inspect vehicle:
1000

Yes No ←

Select option, then
press ENTER

8.2.34 If you do not wish to **AUDIT** this vehicle again select “NO”. You will be returned to the Vehicle Menu screen, from which you can select the next vehicle you wish to audit. (See Step 8.2.1)

8.3 Adjusting a Tire Air Pressure Without Using the AIR **AUDIT** Tool.

When the following typical Air Pressure Adjustment screen at left is displayed at Step 8.2.10, the decision can be made to use the AIR **AUDIT** Tool to perform the operation automatically, by selecting “Adjust tire to recommended air pressure”, or to perform the operation manually by selecting “Skip tire pressure adjustment”, as shown at right below.

Air Pressure Adjustment Screen (typical) Air Pressure Adjustment Screen (typical)

Recommended Air
Pressure:

100 psi

→ Adjust tire to
recommended air
pressure.

Skip tire pressure
Adjustment.

Select option, then
Press ENTER.

Recommended Air
Pressure:

100 psi

Adjust tire to
recommended air
pressure.

→ Skip tire pressure
adjustment.

Select option, then
press ENTER

- 8.3.1 If the tire air pressure adjustment is to be conducted manually, move the arrow to “Skip tire pressure adjustment”, as shown at right above, and press ENTER.
- 8.3.2 The following Initial Tire Air Pressure screen, at bottom left, will appear. Enter the manually measured initial tire air pressure by using the horizontal and vertical arrow buttons, then press ENTER.
- 8.3.3 The following Final Tire Air Pressure Screen will appear. Enter the manually measured adjusted final tire air pressure, then press ENTER.

Initial Tire Air Pressure Screen (typical)

Use up and down
arrows to enter
INITIAL air pressure

93 psi

Press ENTER
when done.

Final Tire Air Pressure Screen (typical)

Use up and down
arrows to enter
FINAL air pressure

100 psi

Press ENTER
when done.

- 8.3.4 The Tire Status Screen at Step 8.2.14 will appear. Continue from Step 8.2.14.

CONDUCTING AN AUDIT DATABASE UPLOAD FROM THE DATA AUDIT TOOL

Take the DATA **AUDIT** Tool to the **AUDIT** Battery Charger/Docking Tool and proceed as follows:

9.1 Setting Date and Time on the DATA **AUDIT** Tool Screen

- 9.1.1 Press the ON/OFF button on the DATA **AUDIT** Tool until the following typical Introductory screen display appears. Press the + and - buttons to adjust the screen contrast lighting to provide the best viewing contrast with the prevailing lighting conditions.

Introductory Screen (typical)

IMI/BUDINI
DATA AUDIT

9.2 Installing the DATA **AUDIT** Tool into the **AUDIT** Battery Charger/Docking Tool Docking Section

NOTE: Before installing the DATA **AUDIT** Tool into the **AUDIT** Battery Charger/Docking Tool, ensure that the **AUDIT** Battery Charger/Docking Tool is connected to a live standard 110 - 125 volt 60Hz outlet. Also ensure that the RS 232 cable is connected between the **AUDIT** Battery Charger/Docking Tool and the computer Com Port. Also ensure that the required **AUDIT** database is in the DATA **AUDIT** Tool and that the computer is ready to receive the uploaded tire audit database from the DATA **AUDIT** Tool.

9.2.1 Place the DATA **AUDIT** Tool, with the screen side uppermost, into the docking channel in the **AUDIT** Battery Charger/Docking Tool.

9.3 Conducting the **AUDIT** Database Upload Procedure

9.3.1 Press the MENU button. The following MENU screen at left will appear.

MENU Screen

Select Option, then
Press ENTER

--→ Go to Vehicle Menu

Get data from PC

Send data to PC

Change the date

MENU Screen

Select Option, then
Press ENTER

Go to Vehicle Menu

Get data from PC

--→ Send data to PC

Change the date

9.3.2 Select "Send data to PC", using the down arrow button, as shown at right above, and then press the ENTER button. The following typical Connecting to PC screen will appear.

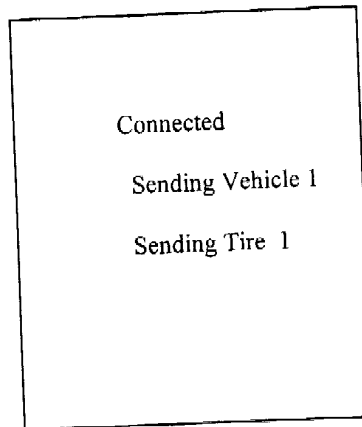

Connecting to PC Screen

Connecting to PC

Press ENTER
to abort

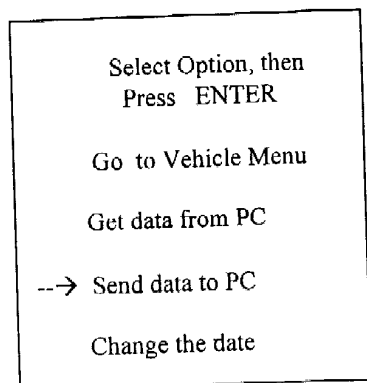

- 9.3.3 When the connection between the computer and the DATA **AUDIT** Tool is established the following Connected screen will appear.

Connected Screen

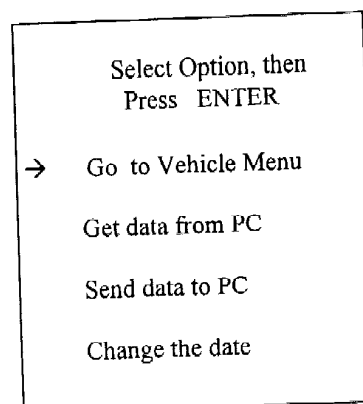

- 9.3.4 The screen will show the progression through all tires on Vehicle 1, then the vehicle number will change to 2, and the progression through all tires on Vehicle 2 will be seen.
- 9.3.5 This uploading of the vehicle and tire data will continue until the last tire on the last vehicle has been uploaded.
- 9.3.6 Upon completion of the upload, the MENU screen will appear again, with the arrow still pointing to "Send Data to PC", as shown at left below.

MENU Screen

MENU Screen

- 9.3.7 Move the arrow to point at “Go to Vehicle Menu”, and then press ENTER.

The typical Vehicle Menu screen will reappear, as shown below, with the vehicles and tires database data that was just uploaded still present. This database will only be replaced when a new database is downloaded into the DATA **AUDIT** Tool, as described in Section 6.0.

Vehicle Menu Screen

Select Vehicle, then press ENTER		
➔ 1000	1-- --1----	1
1001		1
1002		1
1003		1
1004		1
1005		1
2001	1-1----1----1-1	
2002	1-1----1----1-1	
3000		
3001		111

- 9.3.8 Press the ON/OFF button to switch the DATA **AUDIT** Tool OFF and end the upload operation.
- 9.4.1 Remove the DATA **AUDIT** Tool from the docking channel
- 9.4 Verifying the Uploading of the **AUDIT** Database into the Computer
- 9.4.1 Check with the operator of the computer to which the database was uploaded, to determine if the upload was completed successfully, with all the database vehicles and their respective tires and audit changes being uploaded correctly.

LOW INTERNAL BACKUP BATTERY WARNINGS

The following Low Backup Battery Screens will follow the Introductory Screen if the internal battery is dangerously low and needs replacing.

- 10.1 If the internal backup battery is low and needs replacing and audited data is stored in the DATA AUDIT Tool and has not been Uploaded into the AUDIT Tire Database computer; the following screen will appear.

DATA Stored in DATA AUDIT Tool But Not Yet Uploaded Screen

```
*****
Backup Battery Low
*****

First upload data
to PC immediately to
avoid loss of data.

Then, turn power off
and replace backup
battery.

Press ENTER
to Continue
```

If the internal backup battery needs replacing and there is no audit data in the DATA AUDIT Tool that has not been uploaded, the following screen will appear.

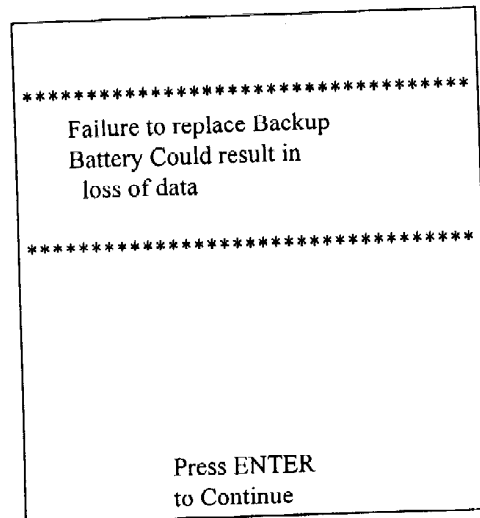

```
*****
Backup Battery Low
*****

Turn power off and
Replace backup
batteries.

Press ENTER
to Continue
```

- 10.2 Pressing ENTER will cause the following Failure to Replace Backup Battery screen to appear.

Failure to Replace Backup Battery Screen

10.3 Action to be Taken

Take the appropriate action to avoid loss of valuable data. Make immediate arrangements for, and conduct a database upload into the **AUDIT** Tire Management Database Computer.

Consult International Marketing, Inc. to arrange for a replacement DATA **AUDIT** Tool or the replacement of the internal backup battery.
