

Operational Description

When press the switch SW1(ss-23D08-G4) 9V to Boost circuit, output two sets of stable Voltage (5V and 9V). Audio signal through J1(st212) Headphone Jack to C5(1uF) and C6(1uF) to control Q1(1815), stability frequency signal (181.7-215.8MHz) was produced by VCO(Y1,TX). Then the signal is amplified by Q2,Q3,Q3 and send out by Antenna.
