

## SafeCom Concept

of **Printing** in a new way.

no longer send your print job directly to a fax printer, you send it to a print job database, where it is stored for later retrieval.

can pull your print jobs from the database to a SafeCom printer by sliding your **SafeCard** through the **SafeCom terminal** at the printer.

it is up to you, **where** you want to print out and **when** you want to print out.

nobody but you will see your print jobs.

## About i-data

Founded in 1981 and based in a suburb of Copenhagen, Denmark, the i-data international group is comprised of two divisions. i-data Printing Systems is the market and technology leader in the printing connectivity market, and LASAT Networks is one of Europe's leading vendors of Internet connectivity products for small to medium-sized enterprises. The combined company has an installed base of several million units. The i-data international group has approximately half the Fortune 500 as customers, as well as thousands of small to medium-sized enterprises worldwide. The company's products are available in more than 40 countries through an extensive network of distributors and sales offices.

### NOTE:

*This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation.*

*This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio Communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:*

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

### CAUTION:

*Changes or modifications not expressly approved by i-data could void the user's authority to operate this equipment according to part 15 of the FCC rules.*

### CE conformance

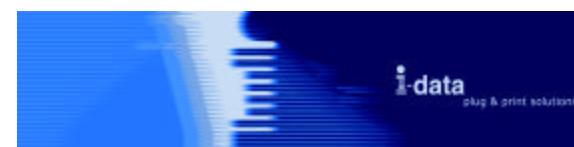

*This product has been developed and produced in accordance with the EMC directive and the Low Voltage directive and therefore carries the CE mark.*

*Company and product names mentioned in this guide are trademarks or registered trademarks of their respective owners.*

## Installation Instructions

No. 10404-02

i-data international a-s  
strupvej 35-43 • 2880 Bagsvaerd • Denmark  
ne: +45 44 36 60 00 • Fax: +45 44 36 61 11

Visit us at [www.i-data.com](http://www.i-data.com)

installation instructions explain how to install your SafeCom and EasyCom.

#### afeCom Kit contains:

afeCom Terminal  
afeCom Eth 100 PrintServer (optional)  
Serial connection cable  
Wall Plug  
afeCom CD-ROM  
0 SafeCards  
Installation Instructions

#### erequisites

Microsoft Windows NT Server version 4.0 (x86) with Service Pack 4.0. TCP/IP must be installed.  
The name and model of the printer(s) that is to be used with the SafeCom.  
An IP address for the EasyCom

1

#### Software on the Server

Insert the SafeCom CD-ROM into your NT server.  
Follow the instructions on the screen to install the software.  
(we recommend that you view/print the documentation)  
Once you have installed you must restart the computer.

2

#### afeCom Printer

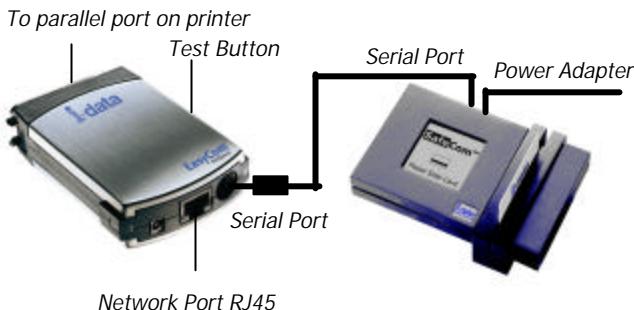

Click the **Start** menu, point to **Settings** and click **Printers**.  
Click **Add Printer**, and select **My Computer**. Click **Next**.  
Click **Add Port**, and select **SafeComPort**.  
Click **New Port** and type a unique name (of your own choice) for the port in **Port Name**. Click **OK** and **Close**.  
Click **Next**, and click the manufacturer and model of your printer. Click **Next**.  
Install or keep printer driver. Click **Next**.  
Type in the **Printer Name**. Click **Next**.  
Click **Shared**, and type in **Share Name**. Click **Next**.  
Click **Yes** to print a test page. You will be asked to confirm that the test page was printed correctly, but the test page will be printed as part of STEP 3. For now, answer **Yes**.

#### STEP 3

In order to verify the subsequent hardware installation (and that the test page prints out correctly), you need to know your PUK (Personal User Key) code.

1. Click the **Start** menu, point to **Programs, i-data SafeCom** and click **Administrator**.
2. **User Name** is **ADMIN** and **Password** is **nimda** (case sensitive).
3. Locate yourself on the list of **User accounts** and write down your PUK code. You are now ready to install the hardware.

#### Install Hardware

#### Installation

1. Power off your printer.
2. Connect the EasyCom to the parallel port of the printer and secure it using the two mounting clips.
3. Connect network cable to the **RJ45** port on the rear panel of the EasyCom.
4. Connect the EasyCom to the SafeCom using the serial connection cable. **The ferrite should be on the plug connecting to the EasyCom's serial port.**
5. Connect the power adapter to the power outlet and to the SafeCom. Power on the printer.

The complete **Installation Guide** will be printed to verify the installation. Keep the guide for later reference/troubleshooting.

**Note:** If nothing is printed, please check that the printer is online, not in an error condition (i.e. paper out, toner low, etc.), and that the EasyCom is firmly connected to the parallel port.

#### Configure Hardware

1. If the EasyCom did not obtain an IP address automatically, the SafeCom front panel will prompt you for IP Address, Subnet mask, and Gateway. Use the dot (.) to step between the numbers in the addresses (x.x.x.x). Press 'Select' to accept an address.
2. The SafeCom will now search for SafeCom Servers. If it does not discover a SafeCom Server, the text **Discover Subnets** will appear followed by the entered IP address(es) and an item called **(new entry)**. Highlight **(new entry)** and press 'Select'. Then add the IP address of the SafeCom Server to the list of Discover subnets. (See the **SafeCom Installation and Operator's Guide** for additional information).
3. A list of Windows printer drivers\* will be displayed. Select the printer driver to match the connected printer.

The EasyCom is now configured for SafeCom printing. Additional configuration can be made from the Internet Browser.

\* The list of available printer drivers is provided by the SafeCom software. The list is identical to the printers that use the **SafeCom Port**, that is the printers that were added under **Add Printers**. But in order to find the correct printer driver, the SafeCom must have connection to the server.

#### Print the Test Page

1. Slide your SafeCard through the SafeCom terminal.
2. Enter your 8-ciphered PUK-code. The display will automatically prompt you for a 4-ciphered PIN-code of your own choice. You must enter this again to verify it.
3. When you have been created as a new user, the SafeCom welcome screen is displayed, and you are asked to log on again in order to use the SafeCom.
4. Select **Print all Documents**, and the test page is printed.

**For further use of the SafeCom Administrator tool, see the SafeCom Installation & Operator's Guide.**
